The Annotated IFRS Standards 2018

Company Valuation Under IFRS 2e Nick Antill 2008 International Financial Reporting Standards (IFRS) are now mandatory in many parts of the world, including Europe, Australia and China. In addition, many countries are in the process of IFRS adoption. Lastly, foreign registrants in US companies no longer have to undertake a costly US-IFRS reconciliation. Therefore, it is clear that investors, analysts and valuers need to understand financial statements produced under IFRS to feed in to their valuations and broader investment decisions. Written by practitioners for practitioners, the book addresses valuation from the viewpoint of the analyst, the investor and the corporate acquirer. It starts with valuation theory: what is to be discounted and at what discount rate? It explains the connection between standard methodologies based on free cash flow and on return on capital. And it emphasizes that, whichever method is used, accurate interpretation of accounting information is critical to the production of sensible valuations. The authors argue that forecasts of cash flows imply views on profits and balance sheets, and that non-cash items contain useful information about future cash flows - so profits matter. The book then addresses the implications for analysis and valuation of key aspects of IFRS including: - Pensions - Stock options - Derivatives - Provisions - Leases The text also sets out which countries use GAAP, as well as the key differences between IFRS and US GAAP treatments of these issues, in addition to their implications for analysis. A detailed case study is used to provide a step-by-

step valuation of an industrial company using both free cash flow and economic profit methodologies. The authors then address a range of common valuation problems, including cyclical or immature companies, as well as the specialist accounting and modelling knowledge required for regulated utilities, resource extraction companies, banks, insurance and real estate companies. Accounting for mergers and disposals is first explained and then illustrated with a detailed potential acquisition using real companies.

Teaching IFRS Richard M.S. Wilson 2013-09-13 The increasing pace of global conformance towards the adoption of International Financial Reporting Standards (IFRS) highlights the need for accounting students as well as accounting practitioners to be conversant with IFRS. Teaching IFRS offers expert descriptions of, and insights into, the IFRS convergence process from a teaching and learning perspective. Hence this book is both timely and likely to have considerable impact in providing guidance for those who teach financial reporting around the world. The contents of the book come from authoritative sources and offer something distinctive to complement the existing textbooks which typically focus on the technical aspects of IFRS and their adoption. Drawing upon the experiences of those who have sought to introduce IFRS-related classroom innovations and the associated student outcomes achieved therefrom, the book offers suggestions about how to design and deliver courses dealing with IFRS and catalogues extensive listings of IFRS-related teaching resources to support those courses. This book was originally published as a special issue of *Accounting Education: An international journal*.

Aiming for Global Accounting Standards Kees Camfferman 2015-03-26 The International Accounting Standards Board (IASB) and its International Financial Reporting Standards (IFRSs), have acquired a central position in the practice and regulation of financial reporting around the world. As a unique instance of a private-sector body setting standards with legal force in many jurisdictions, the IASB's rise to prominence has been accompanied by vivid political debates about its governance and accountability. Similarly, the IASB's often innovative attempts to change the face of financial reporting have made it the centre of numerous controversies. This book traces the history of the IASB from its foundation as successor to the International Accounting Standards Committee (IASC), and discusses its operation, changing membership and leadership, the development of its standards, and their reception in jurisdictions around the world. The book gives particular attention to the IASB's relationships with the European Union, the United States, and Japan, as well as to the impact of the financial crisis on the IASB's work. By its in-depth coverage of the history of the IASB, the book provides essential background information that will enrich the perspective of everyone who has to deal with IFRSs or the IASB at a

technical or policy-making level.

SEC Docket United States. Securities and Exchange Commission 2008

Treatment Differences and Political Realities in the GAAP-IFRS Debate William W. Bratton 2010 The Securities Exchange Commission has introduced a Roadmap that describes a process leading to mandatory use of IFRS by domestic issuers by 2014. The SEC justifies this initiative on the grounds that global standardization yields cost savings and an ultimate gain in comparability, facilitating the search for global opportunities by U.S. investors and making U.S. capital markets more attractive to foreign issuers. This paper enters an objection, noting that the stakes include more than the choice of the framework for standard setting. The accounting treatments themselves are at issue, treatments that for the most part concern domestic reporting firms and domestic users of financial statements. We present a treatment by treatment comparison of GAAP and IFRS and go on to discuss the differences'

implications. FASB maintained its independence during its 35 year history in the teeth of opposition from corporate management, which experienced a steady diminution of its zone of financial reporting discretion. A switch to IFRS would allow management to reclaim some of the lost territory. Meanwhile, the interest group alignment that protected FASB, comprised of auditing firms, actors in the financial markets, and the SEC, has disintegrated as U.S. capital market power has waned in the face of international competition. Management is the shift's incidental beneficiary, with possible negative effects for reporting quality in domestic markets.

This belongs in every practitioner's collection of must-have valuation books." —Aswath Damodaran, Professor, Stern School of Business, New York University "Pratt and Grabowski have done it again. Just when you thought they couldn't possibly do a better job, they did. Cost of Capital, Fourth Edition is a terrific resource. Transparency in Financial Reporting Ruth Ann McEwen 2009-07-31 By January 2012 all major economies, apart from the US, will provide financial reports using International Financial Reporting Standards (IFRS). This book sets out the key differences between IFRS and US GAAP from a practitioner's perspective, although financial analysts will also benefit from the material presented. The financial crisis has been attributed to, among other things, a perceived lack of transparency in the financial markets. In general, transparency implies an ability to see the reported results of an entity's financial activities clearly and to use these results in making investment decisions. At question is the belief that transparency in financial reporting will lead to transparency in financial markets. Unfortunately, this link may be more subjective than most of us wish. Ruth Ann McEwen presents an analysis of reporting issues affecting transparency under IFRS, compared with US GAAP, and suggests areas of concern for preparers and users of financial reports. Providing an invaluable guide for all accountancy professionals, the book also contains a technical analysis of major accounting issues raised by convergence, and indicates areas of interest during initial adoption of IFRS by US entities. This authoritative book provides all the essential information required for advanced practitioners and analysts at this critical juncture.
