Seize the High Ground James A. Walker 2003 "[Seize the high ground is a] narrative history of the Army's aerospace experience from the 1950s to the present. The focus is on ballistic missile defense, from the early NIKE-HERCULES missile program through the SAFEGUARD acquisition site allowed by the 1972 ABM Treaty to the more advanced 'Star Wars' concepts studies toward the end of the century. [What is] covered is not only the technological response to the threat but the organizational and tactical development of the commands and units responsible for the defense mission"--CMH website.

Peeking at Peak Oil Kjell Aleklett 2012-05-19 The term "Peak Oil" was born in January 2001 when Colin Campbell formed the Association for the Study of Peak Oil & Gas (ASPO). Now, Peak Oil is used thousands of times a day by journalists, politicians, industry leaders, economists, scientists and countless others around the globe. Peak Oil is not the end of oil but it tells us the end is in sight. Anyone interested in food production, economic growth, climate change or global security needs to understand this new reality. In Peeking at Peak Oil Professor Kjell Aleklett, President of ASPO International and head of the world's leading research group on Peak Oil, describes the decade-long journey of Peak Oil from extremist fringe theory to today's accepted fact: Global oil production is entering terminal decline. He explains everything you need to know about Peak Oil and its world-changing consequences from an insider's perspective. In simple steps, Kjell tells us how oil is formed, discovered and produced. He uses science to reveal the errors and deceit of national and international oil authorities, companies and governments too terrified to admit the truth. He describes his personal involvement in the intrigues of the past decade. What happens when a handful of giant oil fields containing two thirds of our planet's oil become depleted? Will major oil consumers such as the EU and US face rationing within a decade? Will oil producing nations conserve their own oil when they realize that no one can export oil to them in the future? Does Peak Oil mean Peak Economic Growth? If you want to know the real story about energy today and what the future has in store, then you need to be "Peeking at Peak Oil".

**"Read You Loud and Clear!"** Sunny Tsiao 2008 From the Dust Jacket: Regardless of how sophisticated it may be, no spacecraft is of any value unless it can be tracked accurately to determine where it is and how it is performing. At the height of the space race, 6,000 men and women operated NASA's Spaceflight Tracking and Data Network at some two dozen locations across five continents. This network, known as the STDN, began its operation by tracking Sputnik 1, the world's first artificial satellite that was launched into space by the former Soviet Union. Over the next 40 years, the network was destined to play a crucial role on every near-Earth space mission that NASA flew. Whether it was receiving the first television images from space, tracking Apollo astronauts to the Moon and back, or data acquiring for Earth science, the STDN was that intricate network behind the scenes making the missions possible. Some called it the "Invisible Network," a hallmark of which was that no NASA mission has ever been compromised due to a network failure. *Read You Loud and Clear!* is a historical account of the STDN, starting with its formation in the late 1950s to what it is today in the first decade of the twenty-first century. It traces the roots of the tracking network from its beginnings at the White Sands Missile Range in New Mexico to the Tracking and Data Relay Satellite System (TDRSS) space-based constellation of today. The story spans the early days of satellite tracking using the Minitrack Network, through the expansion of the Satellite Tracking And Data Acquisition Network (STADAN) and the Manned Space Flight Network (MSFN), and finally, to the Space and Ground Networks of today. Written from a nontechnical perspective, the author has translated a highly technical subject into historical accounts told within the framework of the U.S. space program. These accounts tell how international goodwill and foreign cooperation were crucial to the operation of the network and why the space agency chose to build the STDN the way it did. More than anything else, the story of NASA's STDN is about the "unsung heroes of the space program."

Preparing for Peak Oil in South Africa Jeremy J. Wakeford 2013-11-29 Oil is the lifeblood of modern industrial economies. Petroleum powers virtually all motorized transport, which in turn enables most economic activities and provides mobility for citizens. But oil is a finite resource that is steadily depleting. In the past decade, the phenomenon of global peak oil – the fact that annual world oil production must at some point reach a maximum and then decline – has emerged as one of the twenty-first century's greatest challenges. South Africa imports over two-thirds of its petroleum fuels, and history has shown that oil price shocks generally translate into a weakening currency, rising consumer prices, increasing joblessness and a slow-down in economic activity. This book examines the implications of peak oil for socioeconomic welfare in South Africa and proposes a wide range of strategies and policies for mitigating and adapting to the likely impacts. It contains a wealth of data in tables and figures that illustrate South Africa's oil dependencies and vulnerabilities to oil shocks. The material is presented from a systems perspective and is organized in key thematic areas including energy, transport, agriculture, macro-economy and society. The study highlights the risks, uncertainties and difficult choices South Africa faces if it is to tackle its oil addiction, and thereby serves as an example for researchers, planners and policy-makers in the developing world who will sooner or later confront similar challenges. This case study brings a fresh southern perspective to an issue of global importance, and shows how the era of flattening and then declining global oil supplies may be a pivotal period in which either the project of industrialization progressively runs out of steam, or societies are able to undertake a proactive transition to a more sustainable future.
