Access to Knowledge in Africa Chris Armstrong 2010 Based on the work of the African Copyright and Access to Knowledge (ACA2K) research network, this book describes the legal and practical issues posed by copyright for access to learning materials in eight countries in Africa—Egypt, Ghana, Kenya, Morocco, Mozambique, Senegal, South Africa and Uganda. It identifies the policies and practices that would broaden this access.

Sustainable Energy Landscapes Sven Stremke 2012-09-12 In the near future the appearance and spatial organization of urban and rural landscapes will be strongly influenced by the generation of renewable energy. One of the critical tasks will be the re-integration of these sustainable energy landscapes into the existing environment—which people value and want to preserve—in a socially fair, environmentally sound, and economically feasible manner. Accordingly, *Sustainable Energy Landscapes: Designing, Planning, and Development* focuses on the municipal and regional scale, where energy-conscious interventions are effective, and stakeholders can participate actively in the transition process. This book presents state-of-the-art knowledge in the exciting new field of sustainable energy landscapes. It bridges the gap between theory and fundamental research on the one hand, and practice and education on the other. The chapters—written by experts in their fields—present a selection of interdisciplinary, cutting-edge projects from across the world, illustrating the inspiring challenge of developing sustainable energy landscapes. They include unique case studies from Germany, Taiwan, the United Kingdom, Canada, Denmark, Austria, Italy, and the United States. The editors and team of contributing authors aim to inspire readers, providing a comprehensive overview of sustainable energy landscapes, including principles, concepts, theories, and examples. The book describes various methods, such as energy potential mapping and heat mapping, multicriteria decision analysis, energy landscape visualization, and employing exergy and carbon models. It addresses how to quantify the impact of energy transition both on landscape quality and energy economy, issues of growing importance. The text infuses readers with enthusiasm to promote further research and action toward the important goal of building energy landscapes for a sustainable future.

Project-Based Knowledge in Organizing Open Innovation Sara Bonesso 2014-07-10 Enriching understanding of the current theoretical debate on project-based learning and R&D sourcing, 'Project-based Knowledge in Organizing Open Innovation' draws on innovation literature and knowledge-based perspectives to solve open problems in the relationship between knowledge development at project level and how firms organize product innovation combining in-house R&D activities with inbound open innovation. Through field research in different industrial settings (pharmaceutical, automotive and machine tools) and with complementary methodological approaches, this book provides empirical evidence on how project knowledge features affect sourcing decisions at firm level. Due to the emerging interest in the management literature on project-based organizations and on the relevance of project forms of organizing in a knowledge-based economy, this volume will appeal to scholars and students in business and management, in particular those in innovation management, organization theory and strategic management. Addressing the still open issue of how the firm level should be complemented by studies at the project level of analysis, this book provides theoretical and empirical arguments on the

advantages of a more fine-grained level of analysis to understand how firms organize their innovation processes across boundaries.

Next Generation Search Engines: Advanced Models for Information Retrieval Jouis, Christophe 2012-03-31 Recent technological progress in computer science, Web technologies, and the constantly evolving information available on the Internet has drastically changed the landscape of search and access to information. Current search engines employ advanced techniques involving machine learning, social networks, and semantic analysis. Next Generation Search Engines: Advanced Models for Information Retrieval is intended for scientists and decision-makers who wish to gain working knowledge about search in order to evaluate available solutions and to dialogue with software and data providers. The book aims to provide readers with a better idea of the new trends in applied research.

Voices to Choices Jennifer L. Solotaroff 2019-06-06 Women have experienced significant changes in various spheres of their lives during the last decades as Bangladesh made economic progress. Yet women's economic engagement and empowerment are subdued, as they cannot make sufficient choices for themselves. This book provides a comprehensive analysis of the economic developments in gender equality in Bangladesh. Through examining women's participation in the labour force, ownership and control of household assets, use and control of financial assets, and opportunities for entrepreneurship, the authors have made concrete recommendations to overcome challenges that lie ahead for women's economic empowerment. This book is an important contribution to the knowledge on interventions required by the policy makers and broader stakeholders towards narrowing gender gaps. --Fahmida Khatun, PhD, Executive Director, Centre for Policy Dialogue (CPD), Bangladesh The women's story is central to Bangladesh's economic and social transformation. There is an urgent need to deepen researched understanding of the multidimensional pathways of women's economic empowerment and extent of real progress made. Voices to Choices is an important contribution to this story. Surely, the journey of women's economic empowerment remains a long and challenging one. Realizing the full benefits of new opportunities is often hampered by both new and entrenched insecurities. The task is as much one of empowering women's agency as of dismantling barriers. The responsibility is as much women's as society's. --Hossain Zillur Rahman, PhD, Executive Chairman, Power and Participation Research Centre (PPRC) This book provides critical insights and is timely, as it outlines how girls and women in Bangladesh have gained more opportunities in labor force participation, control over household and financial assets, as well as greater prospects for entrepreneurship. The findings will greatly contribute to future policy and planning for government and key stakeholders working to advance women's economic empowerment in the country. --Sabina Faiz Rashid, PhD, Dean and Professor, BRAC James P. How Knowledge Workers Get Things Done Nathaniel Palmer 2012-01-01 Highly predictable work is easy to support using traditional programming techniques, while unpredictable work cannot be accurately scripted in advance, and thus requires the involvement of the knowledge workers themselves. The core element of Adaptive Case Management (ACM) is the support for real-time decision-making by knowledge workers. *How Knowledge Workers Get Things Done* describes the work of managers, decision makers, executives, doctors, lawyers, campaign managers, emergency responders, strategist, and many others who have to think for a living. These are people who figure out what needs to be done, at the same time that they do it, and there is a new approach to support this presents the logical starting point for understanding how to take advantage of ACM. Keith Swenson points out, "We are seeing a fundamental shift in our workforce, and in the ways they need to be managed. Not only are companies engaging their customers in new ways, but managers are engaging workers in similarly transformed ways." In award-winning case studies covering industries as diverse as law enforcement, transportation, insurance, banking, state services, and healthcare, you will find instructive examples for how to transform your own organization. This important book follows the ground-breaking ACM publications, *Taming the Unpredictable* and *Mastering the Unpredictable* and provides important papers by thought-leaders in this field, together with practical examples, detailed ACM case studies and product reviews.

Innovation through Knowledge Transfer 2010 Robert J. Howlett 2011-05-20 This volume represents the proceedings of the Second International Conference on Innovation through Knowledge Transfer, InnovationKT'2010, organised jointly by KES International and the Institute of Knowledge Transfer, and taking place in Coventry, UK on 7&8 December 2010. Featuring world-class invited speakers and contributions from a range of backgrounds and countries, the conference provided an excellent

opportunity to disseminate, share and discuss the impact of university-business interaction through knowledge transfer in all its forms. There were two main motivations in initiating the Innovation through Knowledge Transfer series. The first aim was to provide the chance for publication on a subject where few opportunities exist already. The second motivation was to foster the development of a community from the diverse range of individuals practicing knowledge transfer. It is becoming clear that the delegates of the conference are drawn from a diverse community of practice. InnovationKT'2010 has succeeded in bringing together contributions from both the academic and practitioner sections of the knowledge transfer community. The programme contained seven invited keynote talks, 40 oral presentations grouped into eight sessions, and one interactive workshop. The proceedings contain 29 chapters drawn from this material. There were 91 registered delegates drawn from 10 countries of the world. The field of knowledge transfer is still immature, but these proceedings demonstrate that InnovationKT conference is making a significant contribution to its academic development.

Forward-looking External Search as a Driver for Innovation Sara Polier 2019-04-25 In this empirical analysis Sara Polier investigates forward-looking external search strategies and their impact on the value contribution of corporate foresight. Based on a mixed method approach combining a quantitative and qualitative analysis of large, R&D-intensive firms, the findings reveal a general positive influence of

different search strategies with respect to the scope (i.e. breadth, depth, and distance) and direction of search (i.e. market, science, and intermediary-driven) on the role of foresight as a driver for innovation. This relationship is found to be mediated by a firm's exploratory learning capability, which appears to facilitate the effective transfer of external future-related knowledge into valuable outputs.

Indigenous Intellectual Property Matthew Rimmer 2015-12-18 Taking an interdisciplinary approach unmatched by any other book on this topic, this thoughtful Handbook considers the international struggle to provide for proper and just protection of Indigenous intellectual property (IP). In light of the United Nations Declaration on the Rights of Indigenous Peoples 2007, expert contributors assess the legal and policy controversies over Indigenous knowledge in the fields of international law, copyright law, trademark law, patent law, trade secrets law, and cultural heritage. The overarching discussion examines national developments in Indigenous IP in the United States, Canada, South Africa, the European Union, Australia, New Zealand, and Indonesia. The Handbook provides a comprehensive overview of the historical origins of conflict over Indigenous knowledge, and examines new challenges to Indigenous IP from emerging developments in information technology, biotechnology, and climate change. Practitioners and scholars in the field of IP will learn a great deal from this Handbook about the issues and challenges that surround just protection of a variety of forms of IP for Indigenous communities.

systems is a rapidly developing domain. There are many topics that deserve attention but have not yet found a place in canonical research. Workshops give researchers the possibility to share preliminary ideas, experimental results, or to discuss research hypotheses. Discussions held during presentations strengthen the paper and prepare it for publication. From our experience, workshops are a perfect instrument with which to create a community around very specific research topics, thus offering the opportunity to promote it. Topics that do not find critical feedback at the main International Conference on Business Information Systems (BIS) may experience fruitful discussion when confronted with a well-focused audience. Over the last few decades, business information systems have been one of the most important factors of the transition toward a knowledge-based economy. At the same time they have been subject to continuous rapid development and innovation driven both by industry and by academia. For the last 12 years these innovations were carefully observed but also shaped by researchers attending BIS yearly.

African Women, ICT and Neoliberal Politics Assata Zerai 2018-09-28 How can we promote people-centered governance in Africa? Cell phones/ information and communications technology (ICT) are shown to be linked to neoliberal understandings of more democratic governance structures, defined by the Worldwide Governance Indicators as: the rule of law, corruption-control, regulation quality, government effectiveness, political stability/no violence, and voice and accountability. However, these indicators fall short: they do not emphasize gender equity or pro-poor policies. Writing from an African feminist scholar-activist perspective, Assata Zerai emphasizes the voices of women in two ways: (1) she examines how women's access to ICT makes a difference to the success of people-centered governance structures; and (2) she demonstrates how African women's scholarship, too often marginalized, must be used to expand and redefine the goals and indicators of democratic governance in African countries. Challenging the status quo that praises the contributions of cell phones to the diffusion of knowledge and resultant better governance in Africa, this book is an important read for scholars of politics and technology, gender and politics, and African Studies.

Along Came Google Deanna Marcum 2021-09-21 An incisive history of the controversial Google Books project and the ongoing quest for a universal digital library Libraries have long talked about providing comprehensive access to information for everyone. But when Google announced in 2004 that it planned to digitize books to make the world's knowledge accessible to all, questions were raised about the roles and responsibilities of libraries, the rights of authors and publishers, and whether a powerful corporation should be the conveyor of such a fundamental public good. *Along Came Google* traces the history of Google's book digitization project and its implications for us today. Deanna Marcum and Roger Schonfeld draw on in-depth interviews with those who both embraced and resisted Google's plans, from librarians and technologists to university leaders, tech executives, and the heads of leading publishing houses. They look at earlier digital initiatives to provide open access to knowledge, and describe how Google founders Sergey Brin and Larry Page made the case for a universal digital library and drew on their company's considerable financial resources to make it a reality. Marcum and Schonfeld examine how librarians and scholars organized a legal response to Google, and reveal the missed opportunities when a settlement with the tech giant failed. *Along Came Google* sheds light on the transformational effects of the Google Books project on scholarship and discusses how we can continue to think imaginatively and collaboratively about expanding the digital availability of knowledge.

In Search of Democracy Larry Diamond 2015-07-16 This book evaluates the global status and prospects of democracy, with an emphasis on the quality of democratic institutions and the effectiveness of governance as key conditions for stable democracy. Bringing together a wide range of the author's work over the past three decades, it advances a framework for assessing the quality of democracy and it analyzes alternative measures of democracy. Drawing on the most recent data from Freedom House, it assesses the global state of democracy and freedom, as of the beginning of 2015, and it explains why the world has been experiencing a mild but now deepening recession of democracy and freedom since 2005. A major theme of the book across the three decades of the author's work is the relationship between democratic quality and stability. Democracies break down, Diamond argues, not so much because of economic factors but because of corrupt, inept governance that violates individual rights and

the rule of law. The best way to secure democracy is to ensure that democracy is accountable, transparent, genuinely competitive, respectful of individual rights, inclusive of diverse forms and sources of participation, and responsive to the needs and aspirations of ordinary citizens. Viable democracy requires not only a state that can mobilize power to achieve collective goals, but also one that can restrain and punish the abuse of power—a particularly steep challenge for poor countries and those with natural resource wealth. The book examines these themes both in broad comparative perspective and with a deeper analysis of historical trends and future prospects in Africa and Asia,. Concluding with lessons for sustaining and reforming policies to promote democracy internationally, this book is essential reading for students and scholars interested in democracy, as well as politics and international relations more generally.

Health Professions Education Institute of Medicine 2003-07-01 The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care,

interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

Enterprise Information Systems Joaquim Filipe 2011-03-14 This book contains substantially extended and revised versions of the best papers from the 12th International Conference on Enterprise Information Systems (ICEIS 2010), held in Funchal, Madeira, Portugal, June 8-12, 2010. Two invited papers are presented together with 39 contributions, which were carefully reviewed and selected from 62 full papers presented at the conference (out of 448 submissions). They reflect state-of-the-art research work that is often driven by real-world applications, thus successfully relating the academic with the industrial community. The topics covered are: databases and information systems integration, artificial intelligence and decision support systems, information systems analysis and specification, software agents and internet computing, and human-computer interaction.
