The Age of Surveillance Capitalism Shoshana Zuboff 2019-01-15 The challenges to humanity posed by the digital future, the first detailed examination of the unprecedented form of power called "surveillance capitalism," and the quest by powerful corporations to predict and control our behavior. In this masterwork of original thinking and research, Shoshana Zuboff provides startling insights into the phenomenon that she has named surveillance capitalism. The stakes could not be higher: a global architecture of behavior modification threatens human nature in the twenty-first century just as industrial capitalism disfigured the natural world in the twentieth. Zuboff vividly brings to life the consequences as surveillance capitalism advances from Silicon Valley into every economic sector. Vast wealth and power are accumulated in ominous new "behavioral futures markets," where predictions about our behavior are bought and sold, and the production of goods and services is subordinated to a new "means of behavioral modification." The threat has shifted from a totalitarian Big Brother state to a ubiquitous digital architecture: a "Big Other" operating in the interests of surveillance capital. Here is the crucible of an unprecedented form of power marked by extreme concentrations of knowledge and free from democratic oversight. Zuboff's comprehensive and moving analysis lays bare the threats to twenty-first century society: a controlled "hive" of total connection that seduces with promises of total certainty for maximum profit -- at the expense of democracy, freedom, and our human future. With little resistance from law or society, surveillance capitalism is on the verge of dominating the social order and shaping the digital future -- if we let it.

The Carbon Cycle T. M. L. Wigley 2005-08-22 Reducing carbon dioxide (CO₂) emissions is imperative to stabilizing our future climate. Our ability to reduce these emissions combined with an understanding of how much fossil-fuel-derived CO₂ the oceans and plants can absorb is central to mitigating climate change. In *The Carbon Cycle*, leading scientists examine how atmospheric carbon dioxide concentrations have changed in the past and how this may affect the concentrations in the future. They look at the carbon budget and the "missing sink" for carbon dioxide. They offer approaches to modeling the carbon cycle, providing mathematical tools for predicting future levels of carbon dioxide. This comprehensive text incorporates findings from the recent IPCC

reports. New insights, and a convergence of ideas and views across several disciplines make this book an important contribution to the global change literature.

Empowering Global Citizens Fernando Reimers 2016-07-20 How do we help students work effectively with others from diverse cultural backgrounds? How do we help them understand the world? How do we prepare them for work and life in an era of globalization, volatility, and uncertainty? *Empowering Global Citizens* offers educators and parents compelling answers to those questions. This book presents *The World Course*, a curriculum on global citizenship education designed to equip students with the competencies they need to thrive and contribute to sustainable development in an era of globalization. Drawing on curriculum mapping this book offers a coherent and rigorous set of instructional units to support deep learning of twenty-first-century competencies that develop agency, imagination, confidence, and the skills to navigate the complexity of our times. Drawing on a rich conceptual framework of global education, *The World Course* scaffolds the development of global competency drawing on project-based learning and other pedagogies that support personalization. The course expands children's horizons, helping them understand the world in which they live in all its complexity from kindergarten to high school. This is done through learning activities at the zone for proximal development for each age group, with activities that foster student agency and a growth mindset.

Chemical Poems - One on Each Element Mario Markus 2013 Poetry. "How many gorillas must disappear, so that we can talk comfortably on our cell phones? Tantalum, the chemical element number 73, abundant in African ores, gives us the answer. It makes its confession, along with other ingredients of the world, under the researching pen of Mario Markus. This work removes the threshold between the visible and the invisible, indifference and surprise, science and poetry. The chemical elements are more than gadgets of the universe: they are some of the wonderful responses that shape our bodies and fill our spirits with a lasting plenitude. Markus' frank and rich poetry shows this to us as he relates the elements to wine and pencils, music and lamps, mirrors and the courtship of butterflies. From verse to verse, the periodic table becomes no longer a rigid information scheme, but a window into creation and its most precious truth, which is life."—Fl via Alvares Ganem, Brazilian poet

Educating for Sustainability in Primary Schools Neil Taylor 2015-06-17 Education for Sustainability is a key priority in today's schools, as our society seeks to find a balance between environmental, social, cultural, political and economic imperatives that affect our future. As young children will become the next generation of adults, it is vital that they are educated about sustainability issues, so that they can learn to make informed decisions and take positive action for a sustainable world. Teachers are ideally placed to educate for sustainability issues, and indeed have a responsibility to do so. However, they often lack support and experience in this area, and constraints of current curriculum priorities can inhibit Education for Sustainability being taught effectively in many classrooms. *Educating for Sustainability in Primary Schools: Teaching for the Future* addresses this problem by showing how Education for Sustainability can be developed within and across all areas of the primary curriculum in the Australian and New Zealand contexts. The book provides a range of educational approaches and examples of activities to support teachers in addressing national requirements for teaching the major primary curriculum learning areas, while simultaneously educating for sustainability. This integrative approach to primary education can promote knowledge of, positive attitudes

towards and suitable action for sustainability in relevant, meaningful, enjoyable and creative ways. This book is a valuable resource for all primary teachers who wish to make a real difference to educating children for the future.

A Year With Mama Earth Rebecca Grabill 2019-09-10 In September, Mama Earth sighs out the first autumn frost, which crunches under children's feet. Mama Earth looks after nature's plants and animals throughout the year--singing lullabies to fat bears in the fall, dressing evergreens in icicles in winter, and waking up the crocuses in spring. And in the summer, Mama Earth sends warm sunbeams to her beloved children, so they can play outside and enjoy the amazing world around them. With enchanting text and radiant artwork, A Year with Mama Earth offers a joyous celebration of nature's beauty and the changing seasons.

The Story-Killers Terrence O. Moore 2013-10-30 "a stopcommoncore must-read." Michelle Malkin "... I could

hardly put this book down until I finished reading it. . . . [T]his is not a dry read. It is a shocking read." Joy Pullmann, Heartland Institute "It wasn't until I started reading Dr. Moore's writings that I fully comprehended the significance of just what America was about to lose." Heather Crossin, Hoosiers Against Common Core What is the Common Core? How will the Common Core English Standards affect the teaching of great stories in our schools? Will there be any great stories left in the minds of our children when the Common Core has controlled the curriculum and testing of both public and private schools for a few years? What are the real purposes behind the educational coup that has taken place with very little public debate and even less understanding? In this book, school reformer and professor Dr. Terrence Moore carefully examines both the claims made by the architects of the Common Core and the hidden agenda behind the so-called reforms that have been adopted by over forty states in the nation, with very few people understanding what is really going on. Moore not only challenges the illiberal aims of this educational regime, but actually analyzes lessons recommended in the Common Core English Standards and in the new textbooks bearing the Common Core logo. Such a thorough review exposes the absurdity, superficiality, and political bias that can only serve to dumb down the nation's schools. Worse, the means that the Common Core uses is a deliberate undermining of the great stories of our tradition, the stories that in former times trained the minds and ennobled the souls of young people. Those stories are now under attack, and the minds and souls of the nation's children are in peril.

The Lady's Slipper Deborah Swift 2010-11-23 1660. King Charles II has returned from exile, but memories of the English Civil War still rankle. There are old scores to settle, and religious differences threaten to overturn a fragile peace. When Alice Ibbetson discovers a rare orchid, the Lady's Slipper, growing in a wood belonging to Richard Wheeler, she is captivated by its beauty— though Wheeler, a Quaker, is determined to keep the flower where God intended it to grow. Knowing that the orchid is the last of its kind, she steals the flower, little dreaming that her seemingly simple act will set off a chain of events that will lead to murder and exile, and change her life forever...

[Astronomy and Civilization in the New Enlightenment](#) Anna-Teresa Tymieniecka 2010-11-18 This volume represents the first which interfaces with astronomy as the fulcrum of the sciences. It gives full expression to the human passion for the skies. Advancing human civilization has unfolded and matured this passion into the comprehensive science of astronomy. Advancing science's quest for the first principles of existence meets the onto-poietic generative logos of life, the focal point of the New Enlightenment. It presents numerous perspectives illustrating how the interplay between human beings and the celestial realm has informed civilizational trends. Scholars and philosophers debate in physics and biology, the findings of which are opening a more inclusive, wider picture of the universe. The different models of the universal order and of life here presented, all aiming at the first principles of existence—accord with the phenomenology/onto-poiesis of life within the logos-prompted primogenital stream of becoming and action, which points to a future of progressing culture.

21st Century Mage Jason Augustus Newcomb 2002-10-15 For the first time since its initial translation into English at the turn of the century, Jason Newcomb has reinterpreted the sacred magic of Abramelin the Mage into a completely relevant program for contemporary seekers. In the thirty-one chapters of *21st Century Mage*, Newcomb has reinvented the "Knowledge and Conversation of Your Holy Guardian Angel" ritual. He lays out a course of practice and prayer -- and introduces a whole new generation to the Crowleyan esthetic. Thought to be the simplest and most effective explanation of secret Western doctrine, *The Book of the Sacred Magic of Abramelin the Mage*, a 15th century text, laid the foundation for the nineteenth century occult group, the Hermetic Order of the Golden Dawn, and set young Aleister Crowley on his spiritual quest. This is the book that served as the cornerstone of Crowley's lifelong practice. Newcomb's hip, non-denominational reinterpretation requires only openness to the universe and a yearning for understanding and transcendental knowledge. Describing himself as a skeptical and pragmatic mystic, Newcomb shows how drug abuse, sexual compulsion, overeating, fanaticism in all its permutations, are all misplaced yearnings for the "Knowledge and Conversation of Your Holy Guardian Angel." Jason Newcomb combines ideas and exercises from writers through the ages with the Abramelin techniques he himself has used to lose weight and quit smoking.
