Questions and Answers in Embedded Contexts Utpal Lahiri 2002 Linguists have realized for some time that predicates of the "know" and "wonder" classes behave differently in semantic terms with respect to their interrogative complements, but have not so far fully understood how or why. This book seeks to explore and to provide solutions to this and to related problems in explaining the meaning and grammar of embedded interrogatives and the predicates that take interrogative complements (indirect questions and how they are answered).

Questions Veneeta Dayal 2016-11-03 This book synthesizes and integrates 40 years of research on the semantics of questions, and its interface with pragmatics and syntax, conducted within the formal semantics tradition. A wide range of topics are covered, including weak-strong exhaustiveness, maximality, functional answers, single-multiple-trapped list answers, embedding predicates, quantificational variability, concealed questions, weak islands, polar and alternative questions, negative polarity, and non-canonical questions. The literature on this rich set of topics, theoretically diverse and scattered across multiple venues, is often hard to assimilate. Veneeta Dayal, drawing on her own research, brings them together for the first time in a coherent, concise, and well-structured whole. Each chapter begins with a non-technical introduction to the issues discussed; semantically sophisticated accounts are then presented incrementally, with the major points summarized at the end of each section. Written in an accessible style, this book provides both a guide to one of the most vibrant areas of research in natural language and an account of how this area of study is developing. It will be a unique resource for the novice and expert alike, and seeks to appeal to a variety of readers without compromising depth and breadth of coverage.

Research into Design for a Connected World Amaresh Chakrabarti 2019-01-08 This book showcases cutting-edge research papers from the 7th International Conference on Research into Design (ICoRD 2019) – the largest in India in this area – written by eminent researchers from across the world on design processes, technologies, methods and tools, and their impact on innovation, for supporting design for a connected world. The theme of ICoRD'19 has been "Design for a Connected World". While Design traditionally focused on developing products that worked on their own, an emerging trend is to have products with a

smart layer that makes them context aware and responsive, individually and collectively, through collaboration with other physical and digital objects with which these are connected. The papers in this volume explore these themes, and their key focus is connectivity: how do products and their development change in a connected world? The volume will be of interest to researchers, professionals and entrepreneurs working in the areas on industrial design, manufacturing, consumer goods, and industrial management who are interested in the use of emerging technologies such as IOT, IIOT, Digital Twins, I4.0 etc. as well as new and emerging methods and tools to design new products, systems and services.

Terrorism, War and International Law Dr Myra Williamson 2013-02-28 This book analyzes the legality of the use of force by the US, the UK and their NATO allies against Afghanistan in 2001. The work challenges the main ground for resorting to force, namely, self-defence under Article 51 of the United Nations' Charter, by examining each element of Article 51 that ought to have been satisfied in order to legitimise the use of force. It also examines the wider context, including comparable Security Council resolutions in historic situations as well as modern instances where force has been used, such as against Iraq in 2003 and against Lebanon in 2006. As well as making the case against the legality of the use of force, the book addresses wider questions such as the meaning of 'terrorism' in international law, the changing nature of conflict in the twentieth and twenty-first centuries including the impact of non-state actors and an overview of terrorism trends as well as the evolution of limitations on the resort to force from the League of Nations through to 2001. The book concludes with some insight into the possible future implications for the use of force by states, particularly when force is purportedly justified on the grounds of self-defence.
