Political Theory of Armed Groups Andrei Miroiu 2020-07-21 This Brief provides a comprehensive introduction to current research on armed groups and proposes a unitary political theory for their future analysis. Traditionally, theoretical and historical approaches to armed groups have focused on different categories of armed groups—insurgents, radical groups, militias, governmental forces—instead of treating them as unitary actors in international politics. This Brief departs from this traditional theoretical treatment, arguing that armed groups are fundamental units of politics, outside of class, gender, and the state, and should be analyzed as such. The book begins with a discussion of current classifications and definitions of armed groups as well as methodological approaches towards studying them. Chapter Two discusses armed groups from a historical and anthropological perspective. Chapter Three presents a critical analysis and interpretation of existing political perspectives on armed groups. The book concludes by introducing the new theory. Challenging traditional methods of political theory and analysis while providing a solid introduction to the field, this Brief will be of use to researchers and scholars in political theory, international relations, political science, and anthropology, as well as to professionals in fields such as policing, counter-terrorism, and internal affairs.

And Translation Changed the World (and the World Changed Translation) Alberto Fuertes 2015-02-05 Communication is the basis for human societies, while contact between communities is the basis for translation. Whether by conflict or cooperation, translation has played a major role in the evolution of societies and it has evolved with them. This volume offers different perspectives on, and approaches to, similar topics and situations within different countries and cultures through the work of young scholars. Translation has a powerful effect on the relationships between peoples, and between people and power. Translation affects initial contacts between cultures, some of them made with the purpose of spreading religion, some of them with the purpose of learning about the other. Translation is affected by contexts of power and differences between peoples, raising questions such as "What is translated?", "Who does it?", and "Why?". Translation is an undeniable part of the global society, in which the retrieval and distribution of information becomes an institutional matter, despite the rise of English as a lingua franca. Translation is, in all cases, composed by the voice of the translators, a voice that is not always clearly distinguished but is always present. This volume examines the role of translators in different historical contexts, focusing particularly on how their work affected their surroundings, and on how the context surrounding them affected their work. The papers collected in this volume were originally presented at the 2013 conference "New Research in Translation and Intercultural Studies" and are arranged in chronological order, extending from 16th-century Mexico to 21st-century Japan.

Assessing and Correcting Reading and Writing Difficulties Thomas G. Gunning 2002 This text provides numerous examples and thorough coverage of procedures for assessing and instructing struggling readers of all ages. In keeping with current theory, the text emphasizes prevention and early intervention. It is based on the premise that student performance is variable and that assessment and instruction are planned and modified to meet the varied needs and levels of students. Gunning does not subscribe to a medical model that emphasizes deficiencies, but rather focuses on what students can do. This text calls for inclusion, not exclusion, but recognizes that struggling learners need expert, carefully planned assessment and instruction. Assessment coverage includes a grounding in basic concepts of tests and measurement. While formal, standardized measures are described, emphasis is placed upon informal but highly regarded techniques such as the informal reading inventory, miscue analysis, running records, observation, think-alouds, holistic scoring of writing, and portfolio assessment. In addition to chapters devoted specifically to assessment, ways to connect assessment and instruction are mentioned throughout the text. Coverage of instructional techniques is thorough and practical. Nine chapters are devoted to instructional techniques.

A Concise History of Afghanistan-Central Asia and India in 25 Volumes HAMID ALIKUZAI 2015-01-19 Thirteen years after the U.S. invasion of Afghanistan Thirteen years after the U.S. invasion of Afghanistan, the gains that the international coalition has made with its local partners are real but reversible. Afghanistan is no longer a global hub of terrorist activity, but Taliban resurgence would threaten to make it one again. Reconstruction assistance has produced demonstrable progress in health, education, and economic well-being, but corruption and governance problems have undermined popular support for the government in Kabul and constrained the overall level of progress. Internationally, a coalition still backs the International Security Assistance Force (ISAF) military mission. However, NATO's will is waning; China, Russia, and India are largely free riders; and Punjab and Iran publicly say the right things, while destabilizing Afghanistan by privately meddling to their own ends. Political and economic realities in the United States make the current level of American engagement in Afghanistan unsustainable. But as the commitment of coalition partners fades, what Washington decides will shape the future of South Asia. Looking ahead, there are three different scenarios for American engagement in Afghanistan. It remains to be seen exactly which route Washington will take. But it is clear that U.S. interests require a long-term commitment not only in Afghanistan but across the region. Lest it be forgotten, the consequences of ignoring the region in the 1990s were visited upon the United States on 9/11. So the most

vital goals present-day are defeating the remnants of al Qaeda in Punjab, preventing the reemergence of terrorist sanctuaries in Afghanistan, ensuring the security of Punjab's nuclear weapons, and discouraging Punjab's use of extremism and terror as a policy instrument. There are three ways forward. Each entails a different degree of involvement and carries varying risks and rewards. The first option is the riskiest. Future #1: Immediate Departure and the Reallocation of Resources because discontent among the U.S. public over the war is already at an all-time high.

Civic Discipline Professor Karen M Morin 2012-11-28 The American Geographical Society was the pre-eminent geographical society in the nineteenth-century U.S. This book explores how geographical knowledge and practices took shape as a civic enterprise, under the leadership of Charles P. Daly, AGS president for 35 years (1864-1899). The ideals and programmatic interests of the AGS link to broad institutional, societal, and spatial contexts that drove interest in geography itself in the post-Civil War period, and also link to Charles Daly's personal role as New York civic leader, scholar, revered New York judge, and especially, popularizer of geography. Daly's leadership in a number of civic and social reform causes resonated closely with his work as geographer, such as his influence in tenement housing and street sanitation reform in New York City. Others of his projects served commercial interests, including in American railroad development and colonization of the African Congo. Daly was also New York's most influential access point to the Arctic in the latter nineteenth century. Through telling the story of the nineteenth-century AGS and Charles Daly, this book provides a critical appraisal of the role of particular actors, institutions, and practices involved in the development and promotion of geography in the mid-nineteenth century U.S. that is long overdue.

Veg(etari)an Arguments in Culture, History, and Practice Cristina Hanganu-Bresch 2020-12-12 This collection explores the arguments related to veg(etari)anism as they play out in the public sphere and across media, historical eras, and geographical areas. As vegan and vegetarian practices have gradually become part of mainstream culture, stemming from multiple shifts in the socio-political, cultural, and economic landscape, discursive attempts to both legitimize and delegitimize them have amplified. With 12 original chapters, this collection analyses a diverse array of these legitimating strategies, addressing the practice of veg(etari)anism through analytical methods used in rhetorical criticism and adjacent fields. Part I focuses on specific geo-cultural contexts, from early 20th century Italy, Serbia and Israel, to Islam and foundational Yoga Sutras. In Part II, the authors explore embodied experiences and legitimation strategies, in particular the political identities and ontological consequences coming from consumption of, or abstention from, meat. Part III looks at the motives, purposes and implication

Educating Adolescent Newcomers in the Superdiverse Midwest Brian David Seilstad 2021-03-24 This book juxtaposes superdiversity with the reality of English-centricity in the United States, set against the long-standing challenges regarding migration and language policy in the US, most recently underlined by Donald Trump's 2016 election win and subsequent aggressive and partially successful attempts to limit migration. The book explores the history, policies, and practices of an adolescent newcomer program in Central Ohio, in the US Midwest, that seeks to provide an equitable and engaging education to its students. It addresses, on the one hand, positive, progressive institutional responses, including an embrace of translanguaging and a willingness to acknowledge and build on students' languacultural backgrounds. On the other hand, the book explores the effects of inconsistent, inefficient and sometimes nonsensical patterns in these responses. The book analyzes student outcomes and argues that, although some students are well-served by the program, tensions in the program lead to uneven, and even troubling, behavior and results, ranging from poor academic performance to dropping out. Finally, the book addresses ongoing evolutions and debates to the program and their potential to realize the program's aspirations.

fundamental question dominates the discussion. Is the purpose of the history of psychology to serve current psychology, rather than to contribute to historical knowledge – and to enter large debates about what historical knowledge means for being human? If the answer is yes, as most psychologists who come to the issues will presume, in what ways? Are these ways philosophically grounded, or do the social and political conditions of power and funding in universities dominate the arguments? In this volume, the contributors demonstrate the relation between historical investigations and current practice. Featured topics include: The history of psychology and its relation to feminism. The history of psychology and its relation to current research assessment and curriculum. The history of science and its relation to psychology. The metalanguage for psychology. Case studies of history in theory construction. Centrality of History for Theory Construction in Psychology will be of interest to psychologists, professors, graduate psychology students, and scholars in the human sciences.
