**Molecular Mechanisms in Yeast Carbon Metabolism** Jure Piškur 2014-05-06 Yeast is one of the most studied laboratory organisms and represents one of the most central models to understand how any eukaryote cell works. On the other hand, yeast fermentations have for millennia provided us with a variety of biotech products, like wine, beer, vitamins, and recently also with pharmaceutically active heterologous products and biofuels. A central biochemical activity in the yeast cell is the metabolism of carbon compounds, providing energy for the whole cell, and precursors for any of the final fermentation products. A complex set of genes and regulatory pathways controls the metabolism of carbon compounds, from nutrient sensing, signal transduction, transcription regulation and post-transcriptional events. Recent advances in comparative genomics and development of post-genomic tools have provided further insights into the network of genes and enzymes, and molecular mechanisms which are responsible for a balanced metabolism of carbon compounds in the yeast cell, and which could be manipulated in the laboratory to increase the yield and quality of yeast biotech products. This book provides a dozen of most comprehensive reviews on the recent developments and achievements in the field of yeast carbon metabolism, from academic studies on gene expression to biotechnology relevant topics.

Latin for Gardeners Lorraine Harrison 2012-09-21 Since Latin became the standard language for plant naming in the eighteenth century, it has been intrinsically linked with botany. And while mastery of the classical language may not be a prerequisite for tending perennials, all gardeners stand to benefit from learning a bit of Latin and its conventions in the field. Without it, they might buy a *Hellebores foetidus* and be unprepared for its fetid smell, or a *Potentilla reptans* with the expectation that it will stand straight as a sentinel rather than creep along the ground. An essential addition to the gardener's library, this colorful, fully illustrated book details the history of naming plants, provides an overview of Latin naming conventions, and offers guidelines for pronunciation. Readers will learn to identify Latin terms that indicate the provenance of a given plant and provide clues to its color, shape, fragrance, taste, behavior, functions, and more. Full of expert instruction and practical guidance, *Latin for Gardeners* will allow novices and green thumbs

alike to better appreciate the seemingly esoteric names behind the plants they work with, and to expertly converse with fellow enthusiasts. Soon they will realize that having a basic understanding of Latin before trips to the nursery or botanic garden is like possessing some knowledge of French before traveling to Paris; it enriches the whole experience.

**Metabolomics Tools for Natural Product Discovery** Ute Roessner 2013-08-21  
Classical natural product chemistry is transitioning to modern day metabolomics as a result of the advent of comprehensive analytical platforms and sensitive analytical instrumentation. Therefore, it is worthwhile to summarize recent developments with current analytical platforms and highlight how metabolomics is being integrated into this classical field to dereplicate and profile natural product extracts. *Metabolomics Tools for Natural Product Discoveries: Methods and Protocols* aims to unite diverse and recently developed methodologies and protocols in order to identify bioactive secondary metabolites for the purpose of drug discovery. Some topics covered in this volume include applications for the extraction of selected natural products from less common sources such as bryophytes and hard corals, various biological assays, comprehensive applications and strategies for GC-MS, LC-MS, and NMR, as well as protocols and strategies for the structure elucidation of isolated natural products. Written in the successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and easily accessible *Metabolomics Tools for Natural Product Discoveries: Methods and Protocols* seeks to serve both professionals and research students with its well-honed methodologies for natural product isolation, biomarker discovery, dereplication, biological assays, and comprehensive metabolomic platforms available for high-throughput analyses.

**Handbook of Behavior, Food and Nutrition** Victor R. Preedy 2011-04-15 This book disseminates current information pertaining to the modulatory effects of foods and other food substances on behavior and neurological pathways and, importantly, vice versa. This ranges from the neuroendocrine control of eating to the effects of life-threatening disease on eating behavior. The importance

of this contribution to the scientific literature lies in the fact that food and eating are an essential component of cultural heritage but the effects of perturbations in the food/cognitive axis can be profound. The complex interrelationship between neuropsychological processing, diet, and behavioral outcome is explored within the context of the most contemporary psychobiological research in the area. This comprehensive psychobiology- and pathology-themed text examines the broad spectrum of diet, behavioral, and neuropsychological interactions from normative function to occurrences of severe and enduring psychopathological processes.

**The French Laundry, Per Se** Thomas Keller 2020-10-27 Named a Best Book of 2020 by Publisher's Weekly Named a Best Cookbook of 2020 by Amazon and Barnes & Noble "Every elegant page projects Keller's high standard of 'perfect culinary execution'. . . . This superb work is as much philosophical treatise as gorgeous cookbook." –Publishers Weekly, STARRED REVIEW Bound by a common philosophy, linked by live video, staffed by a cadre of inventive and skilled chefs, the kitchens of Thomas Keller's celebrated restaurants–The French Laundry in Yountville, California, and per se, in New York City–are in a relationship unique in the world of fine dining. Ideas bounce back and forth in a dance of creativity, knowledge, innovation, and excellence. It's a relationship that's the very embodiment of collaboration, and of the whole being greater than the sum of its parts. And all of it is captured in *The French Laundry, Per Se*, with meticulously detailed recipes for 70 beloved dishes, including Smoked Sturgeon Rillettes on an Everything Bagel, "The Whole Bird," Tomato Consommé, Celery Root Pastrami, Steak and Potatoes, Peaches 'n' Cream. Just reading these recipes is a master class in the state of the art of cooking today. We learn to use a dehydrator to intensify the flavor and texture of fruits and vegetables. To make the crunchiest coating with a cornstarch–egg white paste and potato flakes. To limit waste in the kitchen by fermenting vegetable trimmings for sauces with an unexpected depth of flavor. And that essential Keller trait, to take a classic and reinvent it: like the French onion soup, with a mushroom essence stock and garnish of braised beef cheeks and Comté mousse, or a classic crème brûlée reimaged as a rich, creamy ice cream with a crispy sugar tuile to mimic the caramelized coating. Throughout, there are 40 recipes for the basics to elevate our home cooking. Some are old standbys, like the best versions of beurre manié and béchamel, others more unusual, including a ramen broth (aka the Super Stock) and a Blue-Ribbon Pickle. And with its notes on technique, stories about farmers and purveyors, and revelatory essays from Thomas Keller—"The Lessons of a Dishwasher," "Inspiration Versus Influence," "Patience and Persistence"—*The French Laundry, Per Se* will change how young chefs, determined home cooks, and dedicated food lovers understand and approach their cooking.

**Natural Terpenoids as Messengers** Paul Harrewijn 2012-12-06 In contrast to books on specific bioactive compounds, this book deals with the role of mevalonic acid metabolites (isoprenoids and their derived structures) in metabolism, development, and functions of organisms, which, though diverse, show various levels of communication. Different disciplines are brought together in a discussion of the messenger functions of terpenoids within and between organisms belonging to five biological kingdoms: bacteria, fungi, plants, insects, and vertebrates (including humans). The present volume covers evolutionary aspects of terpenoids in plant physiology, plant-insect relationships, semiochemicals, and in life sciences, with special emphasis on cancer research and treatment. The book provides proposals for multidisciplinary model systems for the study of interrelationships of organisms utilizing terpenoid messengers, and discusses novel strategies for insect control and multifactor treatments of cancer utilizing terpenoids. This book is of interest to scientists, and students at an advanced level: biologists, plant breeders, pharmacologists, specialists in medical fields, especially oncologists, physicians in general, and anyone with a basic biochemical and physiological knowledge.
