**Satellite Communications** Jeremy E. Allnutt 2019-10-01 Extensive revision of the best-selling text on satellite communications – includes new chapters on cubesats, NGSO satellite systems, and Internet access by satellite There have been many changes in the thirty three years since the first edition of *Satellite Communications* was published. There has been a complete transition from analog to digital communication systems, with analog techniques replaced by digital modulation and digital signal processing. While distribution of television programming remains the largest sector of commercial satellite communications, low earth orbit constellations of satellites for Internet access are set to challenge that dominance. In the third edition, chapters one through three cover topics that are specific to satellites, including orbits, launchers, and spacecraft. Chapters four through seven cover the principles of digital communication systems, radio frequency communications, digital modulation and multiple access techniques, and propagation in the earth's atmosphere, topics that are common to all radio communication systems. Chapters eight through twelve cover applications that include non-geostationary satellite systems, low throughput systems, direct broadcast satellite television, Internet access by satellite, and global navigation satellite systems. The chapter on Internet access by satellite is new to the third edition, and each of the chapters has been extensively revised to include the many changes in the field since the publication of the second edition in 2003. Two appendices have been added that cover digital transmission of analog signals, and antennas. An invaluable resource for students and professionals alike, this book: Focuses on the fundamental theory of satellite communications Explains the underlying principles and essential mathematics required to understand the physics and engineering of satellite communications Discusses the expansion of satellite communication systems in areas such as direct-broadcast satellite TV, GPS, and internet access Introduces the rapidly advancing field of small satellites, referred to as SmallSats or CubeSats Provides relevant practice problems based on real-world satellite systems *Satellite Communications* is required reading for undergraduate and postgraduate students in satellite communications courses and an authoritative reference for engineers working in communications, systems and networks, and satellite operations and management.

Prominent New York writers weigh in: Jonathan Lethem confesses his childhood subway sins Colson Whitehead offers mass-transit tips for newcomers to the city Francine Prose recalls the thrill and apprehension of riding alone as a teenage girl Calvin Trillin pokes fun at the classic New York tendency to be skeptical about everything Stan Fischler delights in memories of riding the open-air train cars to Coney Island as a boy Equal parts hilarious, poignant, and heartbreaking, The Subway Chronicles is a journey into New York’s underground with some of today’s most loved writers.

EcoMasterplanning Ken Yeang 2009-05-26 In planning for a sustainable future for our planet, it is vital that we achieve a seamless and benign biointegration of all human interventions in the natural environment. Finding green design solutions for our built environment must start from the wider scale of regional and urban planning and must then be carried right through to infrastructural engineering, architecture and industrial design. Masterplanning affords the chance to redress current environmental imbalances and to reduce the consequences of our built systems on the environment, with the greater and of reversing climate change. Ecomasterplanning presents a groundbreaking integrative and comprehensive approach to masterplanning, illustrated by examples that Ken Yeang – the original pioneer of the ‘green skyscraper’ – has designed in a highly visually driven format, the book examines over 20 of his masterplans from around the world, including those in the Netherlands, china, India, Turkey, Malaysia, Singapore and North America.
