Ancient Philosophy of the Self Pauliina Remes 2008-08-26 Pauliina Remes and Juha Sihvola In the course of history, philosophers have given an impressive variety of answers to the question, "What is self?" Some of them have even argued that there is no such thing at all. This volume explores the various ways in which selfhood was approached and conceptualised in antiquity. How did the ancients understand what it is that I am, fundamentally, as an acting and affected subject, interpreting the world around me, being distinct from others like and unlike me? The authors highlight the attempts in ancient philosophical sources to grasp the evasive character of the specifically human presence in the world. They also describe how the ancient philosophers understood human agents as capable of causing changes and being affected in and by the world. Attention will be paid to the various ways in which the ancients conceived of human beings as subjects of reasoning and action, as well as responsible individuals in the moral sphere and in their relations to other people. The themes of persistence, identity, self-examination and self-improvement recur in many of these essays. The articles of the collection combine systematic and historical approaches to ancient sources that range from Socrates to Plotinus and Augustine.

Twelve Years a Slave Solomon Northup 2021-01-01 "Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

On an Irish Island Robert Kanigel 2013-02-26 *On an Irish Island* tells the remarkable story of a remote outpost nearly untouched by time in the first half of the twentieth century, and of the adventurous men and women who visited and were inspired by it. In a love letter to a vanished way of life, Robert Kanigel brings to life this wildly beautiful island, notable for the vivid communal life of its residents and the unadulterated Irish they spoke well into the twentieth century. With the Irish language rapidly disappearing, Great Blasket became a magnet for scholars, linguists, and writers during the Gaelic renaissance. As we follow these visitors—among them John Millington Synge, author of *The Playboy of the Western World*—we are captivated both by the tiny group of islanders who kept an entire country's past alive and by their complex relationships with those who brought the island's story to the larger world.

Identities, discourses and experiences Nadia Kiwan 2017-10-03 The 2005 rioting in France's suburbs caught the world's attention and exposed the limits of the Republic's policies on the integration of 'immigrant-origin' populations. This book examines academic and public discourses about young people of North African origin in France. The resurgence of such discussions in France, focusing on sensational questions of urban unrest, Islamic fundamentalism and the challenges of increasingly assertive cultural identities, means that it is all the more necessary not to overlook the 'ordinary' majority of young French-North Africans. Their own preoccupations often go unnoticed in a context where issues such as violence in the banlieues and the threat of terrorism are pushed to the fore, sometimes with devastating consequences in terms of discrimination and exclusion. The book rebalances and nuances the debates about post-migrant North-African youth by drawing on extensive empirical research carried out in those suburbs of north-east Paris affected by the riots. It studies the construction of identity amongst this invisible majority and, by adopting an ethnographic approach, addresses the disjuncture between the sometimes inflammatory discourses about this population and their own experiences.

Accountability in education: meeting our commitments UNESCO 2017-10-30 "The second edition of the Global Education Monitoring Report (GEM Report) presents the latest evidence on global progress towards the education targets of the UN Sustainable Development Goals. With hundreds of millions of people still not going to school, and many not achieving minimum skills at school, it is clear education systems are off track to achieve global goals. The marginalized currently bear the most consequences but also stand to benefit the most if policy-makers pay sufficient attention to their needs. Faced with these challenges, along with tight budgets and increased emphasis on results-oriented value for money, countries are searching for solutions. Increased accountability often tops the list. The 2017/8 GEM Report shows the entire array of approaches to accountability in education. It ranges from countries unused to the concept, where violations of the right to education go unchallenged, to countries where accountability has become an end in itself instead of a means to inclusive, equitable and high-quality education and lifelong learning for all. The report emphasizes that education is a shared responsibility. While governments have primary responsibility, all actors - schools, teachers, parents, students, international organizations, private sector providers, civil society and the media 03 have a role in improving education systems. The report emphasized the importance of transparency and availability of information but urges caution in how data are used. It makes the case for avoiding accountability systems with a disproportionate focus on narrowly defined results and punitive sanctions. In an era of multiple accountability tools, the report provides clear evidence on those that are working and those that are not."--Back cover.

Mindstorms Seymour A. Papert 2020-10-06 In this revolutionary book, a renowned computer scientist explains the importance of teaching children the basics of computing and how it can prepare them to succeed in the ever-evolving tech world. Computers have completely changed the way we teach children. We have Mindstorms to thank for that. In this book, pioneering computer scientist Seymour Papert uses the invention of LOGO, the first child-friendly programming language, to make the case for the value of teaching children with computers. Papert argues that children are more than capable of mastering computers, and that teaching computational processes like de-bugging in the classroom can change the way we learn everything else. He also shows that schools saturated with technology can actually improve socialization and interaction among students and between students and teachers. Technology changes every day, but the basic ways that computers can help us learn remain. For thousands of teachers and parents who have sought creative ways to help children learn with computers, Mindstorms is their bible.

The Science of Successful Living Raymond Charles Barker 2018-12-01 "FEW PEOPLE think of life as a creative experiment. Most of us are so busy with routines that we take life for granted. We expect an endless routine of work, a hectic social life each weekend and two weeks' vacation each year. I trust that the readers of this book will derive from it a new interest in life, a zest for doing what needs to be done, and a technique to live with joyous enthusiasm. "Looking at life from an inspired viewpoint you can see those things which are on the side of greatness and cease resisting the petty and the unimportant. Life is a process of intelligence. It always acts intelligently. Problems are the result of living life unintelligently. "The universe is actually a mental system. Its primary nature is the process of ideas becoming form. Every fact in your world is also an idea in your mind. To get new things in your world you must have new ideas in your consciousness. Few people do enough abstract thinking to create new ideas in their minds. They continually think about what they already know and have known for years. This explains the monotony of their lives. "Select the idea of some new experience you want and then think it without ceasing. Mind will deliver to you everything you need in order to accomplish your demonstration. This is far from being impossible. The great, the wise, and the true have proven this to be so. You have done it and so have your friends. You may not have thought of the process as being either spiritual or psychological. You intuitively knew a new idea. Your thinking in terms of this idea caused something to happen in your experience. "This book has been written for that large section of today's population which is spiritually liberal and psychologically aware. Those bound by traditional beliefs will cast it aside. It is my desire that thousands will be helped and healed by reading these pages."—Raymond Charles Barker
