Encyclopedia of Distributed Learning Anna DiStefano 2003-11-06 In today's fast-paced world, with multiple demands on time and resources as well as pressures for career advancement and productivity, self-directed learning is an increasingly popular and practical alternative in continuing education. The Encyclopedia of Distributed Learning defines and applies the best practices of contemporary continuing education designed for adults in corporate settings, Open University settings, graduate coursework, and in similar learning environments. Written for a wide audience in the distance and continuing education field, the Encyclopedia is a valuable resource for deans and administrators at universities and colleges, reference librarians in academic and public institutions, HR officials involved with continuing education/training programs in corporate settings, and those involved in the academic disciplines of Education, Psychology, Information Technology, and Library Science. Sponsored by The Fielding Graduate Institute, this extensive reference work is edited by long-time institute members, bringing with them the philosophy and authoritative background of this premier institution. The Fielding Graduate Institute is well known for offering mid-career professionals opportunities for self-directed, mentored study with the

flexibility of time and location that enables students to maintain commitments to family, work, and community. The Encyclopedia of Distributed Learning includes over 275 entries, each written by a specialist in that area, giving the reader comprehensive coverage of all aspects of distributed learning, including use of group processes, self-assessment, the life line experience, and developing a learning contract. Topics Covered Administrative Processes Policy, Finance and Governance Social and Cultural Perspectives Student and Faculty Issues Teaching and Learning Processes and Technologies Technical Tools and Supports Key Features A-to-Z organization plus Reader's Guide groups entries by broad topic areas Over 275 entries, each written by a specialist in that area Comprehensive index and cross-references between entries add to the encyclopedia's ease of use Annotated listings for additional resources, including distance learning programs, print and non-print resources, and conferences

Computational Solutions for Knowledge, Art, and Entertainment: Information Exchange Beyond Text Ursyn, Anna 2013-10-31 As interactive application software such as apps, installations, and multimedia presentations have become pervasive in everyday life, more and more computer scientists, engineers, and technology experts acknowledge the influence that exists beyond visual explanations. Computational Solutions for Knowledge, Art, and Entertainment: Information Exchange Beyond Text focuses on the methods of depicting knowledge-based concepts in order to assert power beyond a visual explanation of scientific and computational notions. This book combines formal descriptions with graphical presentations and encourages readers to interact by creating visual solutions for science-related concepts and presenting data. This reference is essential for researchers, computer scientists, and academics focusing on the integration of science, technology, computing, art, and mathematics for visual problem solving.

Technical questions and answers for job interview Offshore Drilling Platforms PETROGAV INTERNATIONAL This book offers you a brief, but very involved look into the operations in the drilling of an oil & gas wells that will help you to be prepared for job interview at oil & gas companies. From start to finish, you'll see a general prognosis of the drilling process. If you are new to the oil & gas industry, you'll enjoy having a leg up with the knowledge of these processes. If you are a seasoned oil & gas person, you'll enjoy reading what you may or may not know in these pages. This course provides a non-technical overview of the phases, operations and terminology used on offshore drilling platforms. It is intended also for non-drillling personnel who work in the offshore drilling, exploration and production industry. This includes marine and logistics personnel, accounting, administrative and support staff, environmental professionals, etc. No prior experience or knowledge of drilling operations is required. This course will provide participants a better understanding of the issues faced in all aspects of drilling operations, with a particular focus on the unique aspects of offshore operations.

Academic Writing Eija Ventola 1996-03-15 Writing is crucial to the academic world. It is the main mode of communication among scientists and scholars and also a means for students for obtaining their degrees. The papers in this volume highlight the intercultural, generic and textual complexities of academic writing. Comparisons are made between various traditions of academic writing in different cultures and

contexts and the studies combine linguistic analyses with analyses of the social settings in which academic writing takes place and is acquired. The common denominator for the papers is writing in English and attention is given to native-English writers' and non-native writers' problems in different disciplines. The articles in the book introduce a variety of methodological approaches for analyses and search for better teaching methods and ways of improving the syllabi of writing curricula. The book as a whole illustrates how linguists strive for new research methods and practical applications in applied linguistics.

Mechanics and Strength of Materials Vitor Dias da Silva 2006-01-16 Gives a clear and thorough presentation of the fundamental principles of mechanics and strength of materials. Provides both the theory and applications of mechanics of materials on an intermediate theoretical level. Useful as a reference tool by postgraduates and researchers in the fields of solid mechanics as well as practicing engineers.

150 technical questions and answers for job interview Offshore Oil & Gas Rigs Petrogav International Oil & Gas Training Center 2020-06-30 The job interview is probably the most important step you will take in your job search journey. Because it's always important to be prepared to respond effectively to the questions that employers typically ask at a job interview Petrogav International has prepared this eBooks that will help you to get a job in oil and gas industry. Since these questions are so common, hiring managers will expect you to be able to answer them smoothly and without hesitation. This eBook contains 150 questions and answers for job interview and as a BONUS web addresses to 230 video movies for a better understanding of the technological process. This course covers aspects like HSE, Process, Mechanical, Electrical and Instrumentation & Control that will enable you to apply for any position in the Oil and Gas Industry.

Guide to Computer Network Security Joseph Migga Kizza 2020-06-03 This timely textbook presents a comprehensive guide to the core topics in cybersecurity, covering issues of security that extend beyond traditional computer networks to the ubiquitous mobile communications and online social networks that have become part of our daily lives. In the context of our growing dependence on an ever-changing digital ecosystem, this book stresses the importance of security awareness, whether in our homes, our businesses, or our public spaces. This fully updated new edition features new material on the security issues raised by blockchain technology, and its use in logistics, digital ledgers, payments systems, and digital contracts. Topics and features: Explores the full range of security risks and vulnerabilities in all connected digital systems Inspires debate over future developments and improvements necessary to enhance the security of personal, public, and private enterprise systems Raises thought-provoking questions regarding legislative, legal, social, technical, and ethical challenges, such as the tension between privacy and security Describes the fundamentals of traditional computer network security, and common threats to security Reviews the current landscape of tools, algorithms, and professional best practices in use to maintain security of digital systems Discusses the security issues introduced by the latest generation of network technologies, including mobile systems, cloud computing, and blockchain Presents exercises of varying levels of difficulty at the end of each chapter, and concludes with a diverse selection of practical projects Offers supplementary material for students and instructors at an associated website, including slides, additional projects, and syllabus suggestions This important textbook/reference is an invaluable resource for students of computer science, engineering, and information management, as well as for practitioners working in data- and information-intensive industries.

Mobile Networks and Management Ramón Agüero 2017-01-17 This book constitutes the refereed post-conference proceedings of the 8th International Conference on Mobile Networks and Management,

MONAMI 2016, held in Abu Dhabi, United Arab Emirates, in October 2016. The 14 revised full papers were carefully reviewed and selected from 18 submissions. The papers are organized thematically in four parts, starting with cloud computing and software defined networking followed by Internet-of-the-things, vehicular networks and novel techniques and algorithms.

Network, Innovation and Competence-based Economy Anna Ujwary-Gil 2019-01-01 The inspiration for this monograph is the progress in information and IT technologies observed over several decades and the accompanying development of digital competences. The collected results of the research work are grouped into three distinct chapters, which, at the same time, have a common denominator in research perspectives. Network-based economy, innovation-based economy, and competence-based economy are primarily analyzed in relation to technological changes in the ICT area. Each of these perspectives ultimately leads towards Economy 4.0 due to the progressing digital revolution, called the fourth industrial revolution. The contemporary importance of networks, innovations and managerial competences in the economy is analyzed primarily in connection with technological progress. The issue of networks in economic life has been developing for over 30 years. The role of the network in achieving a competitive advantage is unquestioned, while research issues are still being developed. This technological perspective is the most important context for network research today. Contemporary business models are developed based on a skillfully built inter-organizational network and a consciously used intra-organizational network. This applies to both commercial organizations and public entities. These issues are reflected in articles contained in this monograph, in particular in the first chapter. Various research conducted in organizations proves the increasing awareness of the importance of social life by managers and leaders, as well as the increase in the ability to build networks using information and ICT. Research on networks, which allows an understanding of the phenomenon of network formation, leads to the creation of methods and tools supporting network management. Modern network researchers, especially in the field of management sciences, point out that understanding the nature of the network and the possibilities of interacting with the network will determine the competitive position of the organization. This awareness and the complexity of the network are a constant motivation to develop knowledge and use its application character. The concept of an innovation-based economy is included in the second chapter and is also related to technological progress in the field of communication. The studies presented relate to the degree of innovation, skillful differentiation of innovation and imitation, the effectiveness of project financing, and the implementation of innovation. An important contribution to building knowledge on innovation comes from research conducted in individual sectors or regions, where a new, important perspective is gained, and specific, sometimes unique determinants of creating innovation are pointed out. References to regional and sectoral conditions can be found in individual subchapters. The research conclusions drawn have a cognitive and practical value for both researchers and management practitioners. In the third chapter of the monograph, studies that make an important contribution to building or verifying knowledge about the competence-based economy are grouped together. The research refers to the most important management problems and barriers to the development of organizations related to employees' competences. Reference was made to many research currents in management, e.g. to empower employees, build the image of the employer, and the concept of sustainable development. Due to their long history of development, they would seem to be running out, while researchers prove that in contemporary commercial and non-commercial organizations deficits in managerial competencies are still identified. This applies to both human management and technical competences, especially digital. Therefore, research indicating the

reasons for a lack of competence, in an era of strong popularization of these issues, seems to be interesting. The purpose of this monograph was to present current research results and their importance in developing knowledge about the economy based on networks, innovations, and competences. A lot of research was conducted from the perspective of changes in technological progress and the challenges of Economy 4.0. The new possibilities brought by the digital revolution in the field of building and managing networks and developing network-based business models cannot be underestimated. It should be expected that future innovations will be developed mainly thanks to digital progress and will be determined by the digital competences of managers and leaders. Modern research also shows that new generations of employees will compete primarily in the use of modern technological solutions such as data acquisition and processing, analyzes and simulations on large data sets (big data, science data), automation and robotization of production processes, software integration, cloud solutions, and especially the increasingly comprehensive use of the Internet. The importance of scientific research for learning about future phenomena, understanding and taming the future is invaluable. The authors and editors of the book express the hope that the research results presented in it will become an inspiration for new scientific explorations and the implementation of changes in organizations and economics.

Engineering Basics: Electrical, Electronics and Computer Engineering T. Thyagarajan 2007 Designed For Entry-Level Engineering Students, This Book Presents A Thorough Exposition Of Electrical, Electronics, Computer And Communication Engineering. Simple Language Has Been Used Throughout The Book And The Fundamental Concepts Have Been Systematically Highlighted * This Edition Includes New Chapters On * Transmission And Distribution * Communication Services * Linear And Digital Integrated Circuits * Sequential Logic System * The Book Also Includes * Large Number Of Diagrams For A Clear Understanding Of The Subject * Cumerous Solved Examples Illustrating Basic Concepts And Techniques * Exercises And Review Questions With Answers * Revision Formulae For Quick Review And RecallAll These Features Make This Book An Ideal Text For Both Degree And Diploma Students Engineering.

Looking Over the Fence at Networks National Research Council 2001-08-29 A remarkable creation, the Internet encompasses a diversity of networks, technologies, and organizations. The enormous volume and great variety of data carried over it give it a rich complexity and texture. It has proved difficult to characterize, understand, or model in terms of large-scale behaviors and a detailed understanding of traffic behavior. Moreover, because it is very difficult to prototype new networks-or even new networking ideas-on an interesting scale, data-driven analysis and simulation are vital tools for evaluating proposed additions and changes to its design. Some argue that a vision for the future Internet should be to provide users the quality of experience they seek and to accommodate a diversity of interests. Looking Over the Fence at Networks explores how networking research could overcome the evident obstacles to help achieve this vision for the future and otherwise better understand and improve the Internet. This report stresses looking beyond the current Internet and evolutionary modifications thereof and aims to stimulate fresh thinking within the networking research community.

Recent Advances of Neural Network Models and Applications Simone Bassis 2013-12-19 This volume collects a selection of contributions which has been presented at the 23rd Italian Workshop on Neural Networks, the yearly meeting of the Italian Society for Neural Networks (SIREN). The conference was held in Vietri sul Mare, Salerno, Italy during May 23-24, 2013. The annual meeting of SIREN is sponsored by International Neural Network Society (INNS), European Neural Network Society (ENNS) and IEEE Computational Intelligence Society (CIS). The book – as well as the workshop- is organized in two main components, a special session and a group of regular sessions featuring different aspects and point of views of artificial neural networks, artificial and natural intelligence, as well as psychological and cognitive theories for modeling human behaviors and human machine interactions, including Information Communication applications of compelling interest.

Networks, Crowds, and Markets David Easley 2010-07-19 Are all film stars linked to Kevin Bacon? Why do the stock markets rise and fall sharply on the strength of a vague rumour? How does gossip spread so quickly? Are we all related through six degrees of separation? There is a growing awareness of the complex networks that pervade modern society. We see them in the rapid growth of the Internet, the ease of global communication, the swift spread of news and information, and in the way epidemics and financial crises develop with startling speed and intensity. This introductory book on the new science of networks takes an interdisciplinary approach, using economics, sociology, computing, information science and applied mathematics to address fundamental questions about the links that connect us, and the ways that our decisions can have consequences for others.
