business people looking to create wealth in the turbulent post-crisis world In a no holds barred expose of the 2008 financial meltdown from the inside, Ziad K. Abdelnour argues that the political and financial elites have done nothing to fix the structural problems and instead have worsened the situation. By creating more market bubbles, they are actually waging a war on the most productive members of society. For investors, business people, and entrepreneurs that need to navigate the troubled geopolitical waters of the post-crisis world, Abdelnour offers several solutions, including looking at the world anew and understanding that the federal government's primary objective is to promote the creation of an environment conducive to the creation of wealth not job creation, not bailouts, not subsidies, not expansion of the federal bureaucracy, and not providing lifetime support to those who choose not to take advantage of the innumerable opportunities that exist in this nation for them to create a better, more productive life for themselves. Written for investors that need to navigate the troubled geopolitical waters of the post-crisis world · Offers "out of the box" investment tactics and strategies to outsmart the system · Describes political and business solutions that anyone can engage in to restore freedom and prosperity The author is President and CEO of Blackhawk Partners, Inc., a private family office that has two major lines of business, private equity investments and advisory services, and physical commodities trading Compelling and persuasive, Economic Warfare reveals that wealth can be created in the new, post-crisis world, but investors need to understand that the rules of the game have changed.

Peddling Protectionism Douglas A. Irwin 2017-10-24 The Smoot-Hawley tariff of 1930, which raised U.S. duties on hundreds of imported goods to record levels, is America's most infamous trade law. It is often associated with--and sometimes blamed for--the onset of the Great Depression, the collapse of world trade, and the global spread of protectionism in the 1930s. Even today, the ghosts of congressmen Reed Smoot and Willis Hawley haunt anyone arguing for higher trade barriers; almost single-handedly, they made protectionism an insult rather than a compliment. In Peddling Protectionism, Douglas Irwin provides the first comprehensive history of the causes and effects of this notorious measure, explaining why it largely deserves its reputation for combining bad politics and bad economics and harming the U.S. and world

economies during the Depression. In four brief, clear chapters, Irwin presents an authoritative account of the politics behind Smoot-Hawley, its economic consequences, the foreign reaction it provoked, and its aftermath and legacy. Starting as a Republican ploy to win the farm vote in the 1928 election by increasing duties on agricultural imports, the tariff quickly grew into a logrolling, pork barrel free-for-all in which duties were increased all around, regardless of the interests of consumers and exporters. After Herbert Hoover signed the bill, U.S. imports fell sharply and other countries retaliated by increasing tariffs on American goods, leading U.S. exports to shrivel as well. While Smoot-Hawley was hardly responsible for the Great Depression, Irwin argues, it contributed to a decline in world trade and provoked discrimination against U.S. exports that lasted decades. Featuring a new preface by the author, *Peddling Protectionism* tells a fascinating story filled with valuable lessons for trade policy today.

*The Making of Global Capitalism* Leo Panitch 2012-10-15 A groundbreaking account of America's role in global capitalism. The all-encompassing embrace of world capitalism at the beginning of the twenty-first century was generally attributed to the superiority of competitive markets. Globalization had appeared to be the natural outcome of this unstoppable process. But today, with global markets roiling and increasingly reliant on state intervention to stay afloat, it has become clear that markets and states aren't straightforwardly opposing forces. In this groundbreaking work, Leo Panitch and Sam Gindin demonstrate the intimate relationship between modern capitalism and the American state, including its role as an "informal empire" promoting free trade and capital movements. Through a powerful historical survey, they show how the US has superintended the restructuring of other states in favor of competitive markets and coordinated the management of increasingly frequent financial crises. *The Making of Global Capitalism*, through its highly original analysis of the first great economic crisis of the twenty-first century, identifies the centrality of the social conflicts that occur within states rather than between them. These emerging fault lines hold out the possibility of new political movements transforming nation states and transcending global markets.

Learning Empire Erik Grimmer-Solem 2019-09-26 The First World War marked the end point of a process of German globalization that began in the 1870s. *Learning Empire* looks at German worldwide entanglements to recast how we interpret German imperialism, the origins of the First World War, and the rise of Nazism.

Making the Modern American Fiscal State Ajay K. Mehrotra 2013-09-30 Making the Modern American Fiscal State chronicles the rise of the US system of direct and progressive taxation.

Why Americans Still Don't Vote Frances Fox Piven 2000-09-22 Americans take for granted that ours is the very model of a democracy. At the core of this belief is the assumption that the right to vote is firmly established. But in fact, the United States is the only major democratic nation in which the less well-off, the young, and minorities are substantially underrepresented in the electorate. Frances Fox Piven and Richard A. Cloward were key players in the long battle to reform voter registration laws that finally resulted in the National Voter Registration Act of 1993 (also known as the Motor Voter law). When Why Americans Don't Vote was first published in 1988, this battle was still raging, and their book was a fiery salvo. It demonstrated that the twentieth century had witnessed a concerted effort to restrict voting by immigrants and blacks through a combination of poll taxes, literacy tests, and unwieldy voter registration requirements. Why Americans Still Don't Vote brings the story up to the present. Analyzing the results of voter registration reform, and drawing compelling historical parallels, Piven and Cloward reveal why neither of the major parties has tried to appeal to the interests of the newly registered-and thus why Americans still don't vote.

**The Origins and Development of Financial Markets and Institutions** Jeremy Atack 2009-03-16 Collectively, mankind has never had it so good despite periodic economic crises of which the current sub-prime crisis is merely the latest example. Much of this success is attributable to the increasing efficiency of the world's financial institutions as finance has proved to be one of the most important causal factors in economic performance. In a series of insightful essays, financial and economic historians examine how financial innovations from the seventeenth century to the present have continually challenged established institutional arrangements, forcing change and adaptation by governments, financial intermediaries, and financial markets. Where these have been successful, wealth creation and growth have followed. When they failed, growth slowed and sometimes economic decline has followed. These essays illustrate the difficulties of co-ordinating financial innovations in order to sustain their benefits for the wider economy, a theme that will be of interest to policy makers as well as economic historians.

**Irrational Exuberance** Robert J. Shiller 2009-02-09 This first edition of this book was a broad study, drawing on a wide range of published research and historical evidence, of the enormous stock market boom that started around 1982 and picked up incredible speed after 1995. Although it took as its specific starting point this ongoing boom, it placed it in the context of stock market booms generally, and it also made concrete suggestions regarding policy changes that should be initiated in response to this and other such booms. The book argued that the boom represents a speculative bubble, not grounded in sensible economic fundamentals. Part one of the book considered structural factors behind the boom. A list of twelve precipitating factors that appear to be its ultimate causes was given. Amplification mechanisms, naturally-occurring Ponzi processes, that enlarge the effects of these precipitating factors, were described. Part Two discussed cultural factors, the effects of the news media, and of "new era" economic thinking. Part Three discussed psychological factors, psychological anchors for the market and herd behavior. Part Four discussed attempts to rationalize exuberance: efficient markets theory and theories that investors are learning. Part Five presented policy options and actions that should be taken. The second edition, 2005, added an analysis of the real estate bubble as similar to the stock market bubble that preceded it, and warned that "Significant further rises in these markets could lead, eventually, to even more significant declines. The bad outcome could be that eventual declines would result in a substantial increase in the rate of personal bankruptcies, which could lead to a secondary string of bankruptcies of financial institutions as well. Another long-run consequence could be a decline in consumer and business confidence, and another, possibly worldwide, recession." Thus, the second edition of this book was among the first to warn of the global financial crisis that began with the subprime mortgage debacle in 2007

International Political Economy in Context Andrew C. Sobel 2013 Focuses on a micro approach to political economy that grounds policy choices in the competitive environments of domestic politics and decision-making processes.

**Clashing over Commerce** Douglas A. Irwin 2017-11-29 Should the United States be open to commerce with other countries, or should it protect domestic industries from foreign competition? This question has been the source of bitter political conflict throughout American history. Such conflict was inevitable, James Madison argued in The Federalist Papers, because trade policy involves clashing

economic interests. The struggle between the winners and losers from trade has always been fierce because dollars and jobs are at stake: depending on what policy is chosen, some industries, farmers, and workers will prosper, while others will suffer. Douglas A. Irwin's *Clashing over Commerce* is the most authoritative and comprehensive history of US trade policy to date, offering a clear picture of the various economic and political forces that have shaped it. From the start, trade policy divided the nation—first when Thomas Jefferson declared an embargo on all foreign trade and then when South Carolina threatened to secede from the Union over excessive taxes on imports. The Civil War saw a shift toward protectionism, which then came under constant political attack. Then, controversy over the Smoot-Hawley tariff during the Great Depression led to a policy shift toward freer trade, involving trade agreements that eventually produced the World Trade Organization. Irwin makes sense of this turbulent history by showing how different economic interests tend to be grouped geographically, meaning that every proposed policy change found ready champions and opponents in Congress. As the Trump administration considers making major changes to US trade policy, Irwin's sweeping historical perspective helps illuminate the current debate. Deeply researched and rich with insight and detail, *Clashing over Commerce* provides valuable and enduring insights into US trade policy past and present.
