**Ethics in Pharmacy Practice: A Practical Guide** Dennis M. Sullivan 2021-06-16 This textbook offers a unique and accessible approach to ethical decision-making for practicing pharmacists and student pharmacists. Unlike other texts, it gives clear guidance based on the fundamental principles of moral philosophy, explaining them in simple language and illustrating them with abundant clinical examples and case studies. The strength of this text is in its emphasis on normative ethics and critical thinking, and that there is truly a best answer in the vast majority of cases, no matter how complex. The authors place high trust in a pharmacist's moral judgment. This teaches the reader how to think, based on ethical principles, not necessarily what to think. This means navigating between the two extremes of overly theoretical and excessively prescriptive. The cogent framework given in this text uses the language of competing duties, identifying the moral principles at stake that create duties for the pharmacist. This is the balancing act of normative ethics, and of deciding which duties should prevail in a given clinical situation. This work presents a clear-cut pathway for resolving ethical dilemmas encountered by pharmacists, based on foundational principles and critical thinking. **Hearing Health Care for Adults** National Academies of Sciences, Engineering, and Medicine 2016-09-06 The loss of hearing - be it gradual or acute, mild or severe, present since birth or acquired in older age - can have significant effects on one's communication abilities, quality of life, social participation, and health. Despite this, many people with hearing loss do not seek or receive hearing health care. The reasons are numerous, complex, and often interconnected. For some, hearing health care is not affordable. For others, the appropriate services are difficult to access, or individuals do not know how or where to access them. Others may not want to deal with the stigma that they and society may associate with needing hearing health care and obtaining that care. Still others do not recognize they need hearing health care, as hearing loss is an invisible health condition that often worsens gradually over time. In the United States, an estimated 30 million individuals (12.7 percent of Americans ages 12 years or older) have hearing loss. Globally, hearing loss has been identified as the fifth leading cause of years lived with disability. Successful hearing health care enables individuals with hearing loss to have the freedom to communicate in their environments in ways that are culturally appropriate and that preserve their dignity and function. *Hearing Health Care for Adults* focuses on improving the accessibility and affordability of hearing health care for adults of all ages. This study examines the hearing health care system, with a focus on non-surgical technologies and services, and offers recommendations for improving access to, the affordability of, and the quality of hearing health care for adults of all ages.

**Financing Vaccines in the 21st Century** Institute of Medicine 2004-01-10 The national immunization system has achieved high levels of immunization, particularly for children. However, this system faces difficult challenges for the future. Significant disparities remain in assuring access to recommended vaccines across geographic and demographic populations. These disparities result, in part, from

fragmented publicâ€"private financing in which a large number of children and adults face limited access to immunization services. Access for adults lags well behind that of children, and rates of immunizations for those who are especially vulnerable because of chronic health conditions such as diabetes or heart and lung disease, remain low. *Financing Vaccines in the 21st Century: Assuring Access and Availability* addresses these challenges by proposing new strategies for assuring access to vaccines and sustaining the supply of current and future vaccines. The book recommends changes to the Advisory Committee on Immunization Practices (ACIP)-the entity that currently recommends vaccines-and calls for a series of public meetings, a post-implementation evaluation study, and development of a research agenda to facilitate implementation of the plan.
