The Talented Tenth W E B Du Bois 2020-10-13 Taken from "The Talented Tenth" written by W. E. B. Du Bois: The Negro race, like all races, is going to be saved by its exceptional men. The problem of education, then, among Negroes must first of all deal with the Talented Tenth; it is the problem of developing the Best of this race that they may guide the Mass away from the contamination and death of the Worst, in their own and other races. Now the training of men is a difficult and intricate task. Its technique is a matter for educational experts, but its object is for the vision of seers. If we make money the object of man-training, we shall develop money-makers but not necessarily men; if we make technical skill the object of education, we may possess artisans but not, in nature, men. Men we shall have only as we make manhood the object of the work of the schools-intelligence, broad sympathy, knowledge of the world that was and is, and of the relation of men to it-this is the curriculum of that Higher Education which must underlie true life. On this foundation we may build bread winning, skill of hand and quickness of brain, with never a fear lest the child and man mistake the means of living for the object of life.

The World Without Us Alan Weisman 2008-08-05 A study of what would happen to Earth if the human presence was removed examines our legacy for the planet, from the objects that would vanish without human intervention to those that would become long-lasting remnants of humankind.

The Pluto Files: The Rise and Fall of America's Favorite Planet Neil deGrasse Tyson 2010-07-12 The New York Times bestseller: "You gotta read this. It is the most exciting book about Pluto you will ever read in your life." –Jon Stewart
When the Rose Center for Earth and Space at the American Museum of Natural History reclassified Pluto as an icy comet, the New York Times proclaimed on page one, "Pluto Not a Planet? Only in New York." Immediately, the public, professionals, and press were choosing sides over Pluto's planethood. Pluto is entrenched in our cultural and emotional view of the cosmos, and Neil deGrasse Tyson, award-winning author and director of the Rose Center, is on a quest to discover why. He stood at the heart of the controversy over Pluto's demotion, and consequently Plutophiles have freely shared their opinions with him, including endless hate mail from third-graders. With his inimitable wit, Tyson delivers a minihistory of planets, describes the oversized characters of the people who study them, and recounts how America's favorite planet was ousted from the cosmic hub.

Zlata's Diary Zlata Filipovic 2006-02-28 The child's diary that awakened the conscience of the world
When Zlata's Diary was first published at the height of the Bosnian conflict, it became an international bestseller and was compared to The Diary of Anne Frank, both for the freshness of its voice and the grimness of the world it describes. It begins as the day-to-day record of the life of a typical eleven-year-old girl, preoccupied by piano lessons and birthday parties. But as war engulfs Sarajevo, Zlata Filipovic becomes a witness to food shortages and the deaths of friends and learns to wait out bombardments in a neighbor's cellar. Yet throughout she remains courageous and observant. The result is a book that has the power to move and instruct readers a world away.

A Taxonomy for Learning, Teaching, and Assessing Benjamin Samuel Bloom 2001 This revision of Bloom's taxonomy is designed to help teachers understand and implement standards-based curriculums. Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives-cognitive psychologists (learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis). This revisited framework allows you to connect learning in all areas of curriculum. Educators, or others interested in educational psychology or educational methods for grades K-12.

Beyond its historical and social relevancy, it is admired today for its gripping stories, the intensity of spirit, and heartfelt humanity. Narrative of the Life of Frederick Douglass This ebook has been professionally proofread to ensure accuracy and readability on all devices. It was a crime punishable by death, but it resulted in one of the most eloquent indictments of slavery ever recorded. His gripping narrative takes us into the fields, cabins, and manors of pre-Civil War plantations in the South and reveals the daily terrors he suffered. Narrative of the Life of Frederick Douglass Written more than a century and a half ago by a Black man who went on to become a famous orator, U.S. minister to Haiti, and leader of his people, this timeless classic still speaks directly to our age. It is a record of savagery and inhumanity that goes far to explain why America still suffers from the great injustices of the past. Narrative of the Life of Frederick Douglass

A Framework for K-12 Science Education National Research Council 2012-02-28 Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science

and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.

Book of Proof Richard H. Hammack 2016-01-01 This book is an introduction to the language and standard proof methods of mathematics. It is a bridge from the computational courses (such as calculus or differential equations) that students typically encounter in their first year of college to a more abstract outlook. It lays a foundation for more theoretical courses such as topology, analysis and abstract algebra. Although it may be more meaningful to the student who has had some calculus, there is really no prerequisite other than a measure of mathematical maturity.

The Crucible Arthur Miller 2012-03-19 "The Crucible" is a 1952 play by the American playwright Arthur Miller. It is a dramatization of the Salem witch trials that took place in the Province of Massachusetts Bay during 1692 and 1693. Miller wrote the play as an allegory of McCarthyism, when the US government blacklisted accused communists. Miller himself was questioned by the House of Representatives' Committee on Un-American Activities in 1956 and convicted of "contempt of Congress" for refusing to identify others present at meetings he had attended. It was first performed at the Martin Beck Theater on Broadway on January 22, 1953. Miller felt that this production was too stylized and cold and the reviews for it were largely hostile (although The New York Times noted "a powerful play in a driving performance"). Nonetheless, the production won the 1953 "Best Play" Tony Award. A year later a new production succeeded and the play became a classic. It is a central work in the canon of American drama. Fuji Books' edition of "The Crucible" contains supplementary texts: * "Tragedy And The Common Man", an essay by Arthur Miller. * Excerpts from Nathaniel Hawthorne's magnum opus "The Scarlet Letter", a narrative of the Salem Witch trials. * A few selected quotes of Arthur Miller.
