The book draws on Todres et. al's humanisation framework, as well other relevant theories such as positive organisational scholarship, Vygotsky's socio-cultural theory and socio-emotional intelligence. Educational Reciprocity and Adaptivity Abe W. Ata 2017-12-22 *Educational Reciprocity and Adaptability* challenges the common belief that adapting to new educational settings is the responsibility of international students alone. The book argues that reciprocal responses are required by students and stakeholders alike for an efficient and equitable accommodation of international students in educational settings. Considering how international students negotiate academic challenges and social tensions, it presents both theoretical frameworks

and practical tools to work around the tension regarding ethical academic practices. Crucially exploring these issues across a range of geographical and institutional contexts, and therefore offering critical insights into significant developments in international education across the world, the much-needed research in this edited collection explores: institutional educational policies regarding international students and stakeholders; institutional practices and how they are received; educational adaptability and responses from different stakeholders; the experiences of international students and institutions in negotiating academic and social tensions. This important contribution to research on the experiences of international students in different geographical and educational contexts is of great interest to academics, researchers and postgraduate students in the fields of international education, comparative education, sociology of education, youth studies, intercultural studies, migration studies and TESOL.

EBOOK: Introducing Qualitative Research in Psychology Carla Willig 2013-05-16 Why use qualitative research in psychology? How is qualitative research in psychology carried out? What are the major debates and unresolved issues surrounding this form of research? *Introducing Qualitative Research in Psychology* is a vital resource for students new to qualitative psychology. It offers a clear introduction to the topic by taking eight different approaches to qualitative methods and explaining when each one should be used, the procedures and techniques involved, and any limitations associated with such research. Throughout the new edition, material has been re-organized and updated to reflect developments in the field, while Carla Willig's style of writing, popular with students and lecturers alike, remains unchanged. Together with wider coverage of conceptual issues and epistemological & theoretical challenges in qualitative research, this third edition boasts three new methods chapters: Thematic Analysis, Narrative Analysis and Visual Methodologies. Three additional chapters on Qualitative Research Design & Data Collection, The Role of Interpretation and Putting Together A Research Proposal will be invaluable to students and researchers during conceptual preparation. This edition contains more interactive exercises and discussion points in order to help students understand what they are learning, as well as three qualitative research reports written by students. The third edition is

supported by a new Online Learning Centre www.openup.co.uk/willig with resources for lecturers and students. With contributions from Sarah Jane Dryden, Caroline Silcock and Joanna Silver. "All students of qualitative research in psychology will find a wealth of information in Carla Willig's book. With its expanded sections and detailed consideration of concepts, techniques and applications of qualitative research, the interactive approach taken in this book is ably supported by extensive research examples. As usual with Carla Willig's clear and detailed writing style, this book will give both new and existing researchers the opportunity to think clearly about their use of qualitative research and its methods." Dr Nollaig Frost, Senior Lecturer, Psychology, Middlesex University, UK "A tour de force from an expert guide which grounds students in the lexicon of qualitative psychology, before explicating a range of major methodologies. Students will appreciate many worked examples, and will be stimulated by the coverage of contemporary innovations, issues and debates - an invaluable textbook." Professor Brendan Gough, Institute of Health and Wellbeing, Leeds Metropolitan University, UK "In just over a decade, Carla Willig's book has become one of the key introductory texts in the field. Many of my students and supervisees have enjoyed reading it - finding complex issues and debates have been explained in an accessible manner. This latest edition includes helpful advice on writing a research proposal, some newer research methods and discussion about the future of qualitative research. In addition, there are new chapters on epistemology and interpretation which I think my students will find particularly valuable as these are often the most challenging topics when one is new to qualitative research." Dr David Harper, Reader in Clinical Psychology, University of East London, UK "Once again, Carla Willig has produced a wonderfully clear account of how and why qualitative methods ought to be used to answer psychological questions. Not only does Willig examine key theories, ethics and debates surrounding the use and interpretation of qualitative data, she shows us 'how' to do it - step by step, with a tremendous sense of balance and integrity. This new edition covers some of the more recent debates in qualitative research, contains new examples of how to design, carry out and approach analysis in qualitative methods and lots of useful questions that researchers ask themselves along the way. My students have used Willig's writings on qualitative methods for many years as they can understand and engage with it. There is simply no other equivalent text in psychology to rival Willig's - her clarity, conviction and sheer brilliance in putting difficult ideas on methods into plain language is something students in psychology will relish for a very long time to come." Paula Reavey, Professor of Psychology, London South Bank University, UK "In writing this text originally, Carla Willig argued that, unlike quantitative research (where the aim is to follow a set of rules and get them 'right'), qualitative research is more about 'having adventures'. From the start it sounds a lot more fun, and certainly a lot more interesting! And it was. Students and lecturers alike appreciate its lively, practical approach, its very clear and elegant writing, its use of clever examples of students' own work and its lucid explanations of the theory underpinning methods and methodologies. This new, third edition is a real triumph. It's more comprehensive and it's bang up to date, with three additional new chapters, more examples of student projects, and overall an even more systematic approach. It is, in my view, the most approachable and person-friendly text around introducing qualitative research in psychology, and a great opportunity to 'boldly go', have adventures, and really get to grips with doing qualitative research." Wendy Stainton Rogers, Professor Emerita, Faculty of Health and Social Care, The Open University, UK

Decolonial Psychoanalysis Robert Beshara 2019-03-20 In this provocative and necessary book, Robert K. Beshara uses psychoanalytic discursive analysis to explore the possibility of a genuinely anti-colonial critical psychology. Drawing on postcolonial and decolonial approaches to Islamophobia, this book enhances understandings of Critical Border Thinking and Lacanian Discourse Analysis, alongside other theoretico-methodological approaches. Using a critical decolonial psychology approach to conceptualize everyday Islamophobia, the author examines theoretical resources situated within the discursive turn, such as decoloniality/transmodernity, and carries out an archeology of (counter)terrorism, a genealogy of the conceptual Muslim, and a Žižekian ideology critique. Conceiving of Decolonial Psychoanalysis as one theoretical resource for Critical Islamophobia Studies (CIS), the author also applies Lacanian Discourse Analysis to extracts from interviews conducted with US Muslims to theorize their ethico-political subjectivity and considers a politics of resistance, adversarial aesthetics, and ethics of liberation. Essential to any attempt to come to terms with the legacy of racism in psychology, and the only critical psychological study on Islamophobia in the United States, this is a fascinating read for anyone interested in a critical approach to Islamophobia.

Supporting Lifelong Learning: Perspectives on learning Roger Harrison 2002 This book brings together a number of texts to illustrate, explore and challenge some of the ideas and assumptions which underpin notions of lifelong learning. In examining this issue more closely it will appeal to those who are involved in supporting learners in the workplace, the classroom or community. It will also appeal to postgraduate and doctorate level students with an interest in post-school education and training.

Biopsychosocial Approaches in Neurorehabilitation Huw Williams 2005-11-17 There has been significant progress in the field of neurorehabilitation over the past twenty years, particularly in the assessment and management of cognitive impairment. More recently, the stakeholders in neurorehabilitation - clinicians, researchers, purchasers of services and clients - have become aware of the need to develop systems and services for managing the wide ranging psycho-social sequelae of acquired brain injury (ABI). Mood, behavioural and neuropsychiatric conditions have been found to be highly prevalent. Such disorders, at clinical or sub-clinical levels, are disturbing for clients themselves, and for their families, and present a challenge for enabling survivors to regain social roles. Many individuals also experience difficulties in related areas, such as

pain management, drug and alcohol misuse, and in maintaining relationships. Given the wide-ranging psychological, psychiatric, health and social sequelae of ABI, rehabilitation services are often responding to people whose needs are complex and for which the evidence base for practice may be limited. In this Special Issue of Neuropsychological Rehabilitation, leading international experts provide reviews of current thinking on mood, behaviour and neuropsychiatric conditions, along with issues of drug and alcohol use, pain, sexuality and relationships after brain injury. Assessment and management issues are addressed, along with implications for service delivery in developed and in developing world contexts. This Special Issue will be invaluable to a wide range of neurorehabilitation professionals including clinical psychologists, neuropsychologists, speech and language therapists, occupational therapists, neurologists, neuropsychiatrists, clinical nurse specialists, physiotherapists, and case managers. The volume will also be of benefit to those planning or purchasing brain injury rehabilitation services.

Mindfulness in the Workplace Margaret A. Chapman-Clarke 2016-05-03 Mindfulness-based interventions in organizations offer the potential to build individual and organizational resilience, engage employees and address workplace stress. Mindfulness in the Workplace is a practical guide written for practitioners who want to learn how mindfulness can be used as a change management and organizational development strategy. Drawing from the latest research evidence from neuro- and behavioural science, Mindfulness in the Workplace offers a framework and guidance on how to start evolution- not revolution- in the organization. It ensures the greatest chance of success, showing how to identify the key stakeholders and work with them on understanding the power of a mindfulness initiative, how to identify a mindfulness champion, adapt the language of mindfulness to the context of the organization, establish metrics, and measure return on investment. Mindfulness in the Workplace proposes that HR and OD professionals are best placed to understand the complexity of implementing change in organizational systems and, therefore, the practice of mindfulness need to be brought in-house, even if they bring in external mindfulness coaches to train their leaders. Case studies including Capital One Finance and the NHS Mental Health Trust cover the reasoning behind these initiatives, how they were planned, the barriers they faced, the lessons learned, and their results. This book offers a forum for HR and OD practitioners to hear from other practitioners who have implemented organizational mindfulness-based interventions using change management principles so that they can understand how they might be applied to their own practice and their own organizations.
