Public Relations Edward L. Bernays 2013-07-29 Public relations as described in this volume is, among other things, society's solution to problems of maladjustment that plague an overcomplex world. All of us, individuals or organizations, depend for survival and growth on adjustment to our publics. Publicist Edward L. Bernays offers here the kind of advice individuals and a variety of organizations sought from him on a professional basis during more than four decades. With such knowledge, every intelligent person can carry on his or her activities more effectively. This book provides know-why as well know-how. Bernays explains the underlying philosophy of public relations and the PR methods and practices to be applied in specific cases. He presents broad approaches and solutions as they were successfully carried out in his long professional career. Public relations is not publicity, press agency, promotion, advertising, or a bag of tricks, but a continuing process of social integration. It is a field of adjusting private and public interest. Everyone engaged in any public activity, and every student of human behavior and society, will find in this book a challenge and opportunity to further both the public interest and their own interest.

Maybe Esther Katja Petrowskaja 2018-01-30 An inventive, unique, and extraordinarily moving debut memoir that pieces together the fascinating story of one woman's family across twentieth-century Russia, Ukraine, Poland, and Germany. Katja Petrowskaja wanted to create a kind of family tree, charting relatives who had scattered across multiple countries and continents. Her idea blossomed into this striking and highly original work of narrative nonfiction, an account of her search for meaning within the stories of her ancestors. In a series of short meditations, Petrowskaja delves into family legends, introducing a remarkable cast of characters: Judas Stern, her great-uncle, who shot a German diplomatic attaché in 1932 and was sentenced to death; her grandfather Semyon, who went underground with a new name during the Bolshevik Revolution in Russia, forever splitting their branch of the family from the rest; her grandmother Rosa, who ran an orphanage in the Urals for deaf-mute Jewish children; her Ukrainian grandfather Vasily, who disappeared during World War II and reappeared without explanation forty-one years later—and settled back into the family as if he'd never been gone; and her great-grandmother, whose name may have been Esther, who alone remained in Kiev and was killed by the Nazis. How do you talk about what you can't know, how do you bring the past to life? To answer this complex question, Petrowskaja visits the scenes of these events, reflecting on a fragmented and traumatized century and bringing to light family figures who threaten to drift into

obscurity. A true search for the past reminiscent of Jonathan Safran Foer's *Everything Is Illuminated*, Daniel Mendelsohn's *The Lost*, and Michael Chabon's *Moonglow*, *Maybe Esther* is a poignant, haunting investigation of the effects of history on one family.

Island Rivers John R. Wagner 2018-06-18 Anthropologists have written a great deal about the coastal adaptations and seafaring traditions of Pacific Islanders, but have had much less to say about the significance of rivers for Pacific island culture, livelihood and identity. The authors of this collection seek to fill that gap in the ethnographic record by drawing attention to the deep historical attachments of island communities to rivers, and the ways in which those attachments are changing in response to various forms of economic development and social change. In addition to making a unique contribution to Pacific island ethnography, the authors of this volume speak to a global set of issues of immense importance to a world in which water scarcity, conflict, pollution and the degradation of riparian environments afflict growing numbers of people. Several authors take a political ecology approach to their topic, but the emphasis here is less on hydro-politics than on the cultural meaning of rivers to the communities we describe. How has the cultural significance of rivers shifted as a result of colonisation, development and nation-building? How do people whose identities are fundamentally rooted in their relationship to a particular river renegotiate that relationship when the river is dammed to generate hydro-power or polluted by mining activities? How do blockages in the flow of rivers and underground springs interrupt the intergenerational transmission of local ecological knowledge and hence the ability of local communities to construct collective identities rooted in a sense of place?

Advances in 3D Geo-Information Sciences Thomas H. Kolbe 2011-03-23 During the last decade developments in 3D Geoinformation have made substantial progress. We are about to have a more complete spatial model and understanding of our planet in different scales. Hence, various communities and cities offer 3D landscape and city models as valuable source and instrument for sustainable management of rural and urban resources. Also municipal utilities, real estate companies etc. benefit from recent developments related to 3D applications. To meet the challenges due to the newest changes academics and practitioners met at the 5th International Workshop on 3D Geoinformation in order to present recent developments and to discuss future trends. This book comprises a selection of evaluated, high quality papers that were presented at this workshop in November 2010. The topics focus explicitly on the last achievements (methods, algorithms, models, systems) with respect to 3D geo-information requirements. The book is aimed at decision makers and experts as well at students interested in the 3D component of geographical information science including GI engineers, computer scientists, photogrammetrists, land surveyors, urban planners, and mapping specialists.

The Hawfinch Guy Mountfort 2011-10-27 The Collins New Naturalist series is the longest-running and arguably the most influential natural history series in the world with over 100 volumes published in over 60 years. This edition is produced from an original copy by William Collins. While the mainstream New Naturalist volumes were initially intended to deal with broad subjects such as wild flowers, insects or National Parks, a parallel New Naturalist series of monographs on single species or related groups of species was also published between 1948 and 1971. There have been no additions since. Now, for the first time in over forty years, these best-selling volumes are available again. The New Naturalist monographs shared the same high standards of the main series and were envisioned as relatively short books of about 50,000 words, and in a smaller format than the main series. Artists Clifford and Rosemary Ellis were asked to design jackets for this series alongside the main series, which resulted in the same stunning, distinctive cover illustrations that had helped inspire an entire new generation of nature enthusiasts. The Art of Naming Michael Ohl 2018-03-30 From Tyrannosaurus rex to Heteropoda davidbowie: scientific naming as a joyful and creative act. Tyrannosaurus rex. Homo sapiens. Heteropoda davidbowie. Behind each act of scientific naming is a story. In this entertaining and illuminating book, Michael Ohl considers scientific naming as a joyful and creative act. There are about 1.8 million discovered and named plant and animal species, and millions more still to be discovered. Naming is the necessary next step after discovery; it is through the naming of species that we perceive and understand nature. Ohl explains the process, with examples, anecdotes, and a wildly varied cast of characters. He describes the rules for scientific naming; the vernacular isn't adequate. These rules—in standard binomial nomenclature, the generic name followed by specific name—go back to Linnaeus; but they are open to idiosyncrasy and individual expression. A lizard is designated *Barbaturex morrisoni* (in honor of the Doors' Jim Morrison, the Lizard King); a member of the horsefly family *Scaptia beyonceae*. Ohl, a specialist in “winged things that sting,” confesses that among the many wasp species he has named is *Ampulex dementor*, after the dementors in the Harry Potter novels. Scientific names have also been deployed by scientists to insult other scientists, to make political statements, and as expressions of romantic love: “I shall name this beetle after my beloved wife.” *The Art of Naming* takes us on a surprising and fascinating journey, in the footsteps of the discoverers of species and the authors of names, into the nooks and crannies and drawers and cabinets of museums, and through the natural world of named and not-yet-named species.

Fly Away, Pigeon Melinda Nadj Abonji 2014 Fly Away, Pigeon tells the heart-wrenching story of a family torn between emigration and immigration and paints evocative portraits of the former Yugoslavia and modern-day Switzerland. In this novel, Melinda Nadj Abonji interweaves two narrative strands, recounting the history of three generations of the Kocsis family and chronicling their hard-won assimilation. Originally part of Serbia's Hungarian-speaking minority in the Vojvodina, the Kocsis family immigrates to Switzerland in the early 1970s when their hometown is still part of the Yugoslav republic. Parents Miklos and Rosza land in Switzerland knowing just one word??work." And after three years of backbreaking, menial work, both legal and illegal, they are finally able to obtain visas for their two young daughters, Ildiko and Nomi, who safely join them. However, for all their efforts to adapt and assimilate they still must endure insults and prejudice from members of their new community and helplessly stand by as the friends and family members they left behind suffer the maelstrom of the Balkan War. With tough-minded nostalgia and compassionate realism, Fly Away, Pigeon illustrates how much pain and loss even the most successful immigrant stories contain. It is a work that is intensely local, while grounded in the histories and cultures of two distinctive communities. Its emotions and struggles are as universal as the human dilemmas it portrays.

Environmental Information Systems Oliver Günther 2013-03-09 Environmental information systems (EIS) are concerned with the management of data about the soil, the water, the air, and the species in the world around us. This first textbook on the topic gives a conceptual framework for EIS by structuring the data flow into 4 phases: data capture, storage, analysis, and metadata management. This flow corresponds to a complex aggregation process gradually transforming the incoming raw data into concise documents suitable for high-level decision support. All relevant concepts are covered, including statistical classification, data fusion, uncertainty management, knowledge based systems, GIS, spatial databases, multidimensional access methods, object-oriented databases, simulation models, and Internet-based information management. Several case studies present EIS in practice.

Porsche 914, 914/6, 916 Jürgen Lewandowski 2019-04-11 The Porsche 911's little brother... In 1969 a very special sports car was born. The 914 rose from a marriage of convenience of Volkswagen and Porsche, because both companies wanted a small, modern and affordable sports car in their product range, but for little cost. Thus, it was decided to combine the skills of both manufacturers. The result was a light mid-engine sports car with a lively road performance and even 50 years after its launch, it pleases the eye with a fresh design. Back then it was often ridiculed as a 'housewife Porsche' or 'Volks-Porsche', but now, the 914 has come out of the shadow of its big brother the 911 and has a huge fan base; today it lives on in the Boxster and Cayman models. This volume includes: the result of thorough research in the Porsche and VW archives; rich photography; all technical data; development, production, model history and racing appearances.
