Adolescent Identity Treatment Pamela A. Foelsch 2014-07-29 Adolescent Identity Treatment: An Integrative Approach for Personality Pathology is a ground breaking title that provides general and specific clinical strategies to help adolescents who lack an integrated identity. The authors have developed a treatment based on the integration of object relations theory, family systems, attachment, developmental neurobiology and cognitive behavioral approaches that focuses on clearing blockages to normal identity development and adaptive functioning. While most adolescents build satisfying interpersonal relationships, are successful in school and work and begin romantic relationships, there is a minority of adolescents who do not succeed in this and are at a high risk of developing problems in school, work and relationships, problems with affect regulation as well as engaging in a wide range of self-destructive behaviors. In addition to a description of the disorder and assessment, this manual offers extensive clinical examples and concrete interventions, with phase-specific treatment components, including a clear treatment frame, psychoeducation, environmental interventions (with a "Home Plan" that addresses self-care behaviors, responsibilities and improved boundaries that fosters the development of better relationships between the adolescent and family) and parenting strategies, all in the service of creating a space for the individual work with the adolescent.

Prognostication in the Medieval World Matthias Heiduk 2020-11-09 Two opposing views of the future in the Middle Ages dominate recent historical scholarship. According to one opinion, medieval societies were expecting the near end of the world and therefore had no concept of the future. According to the other opinion, the expectation of the near end created a drive to change the world for the better and thus for innovation. Close inspection of the history of prognostication reveals the continuous attempts and multifold methods to recognize and interpret God's will, the prodigies of nature, and the patterns of time. That proves, on the one hand, the constant human uncertainty facing the contingencies of the future. On the other hand, it demonstrates the firm believe during the Middle Ages in a future which could be shaped and even manipulated. The handbook provides the first overview of current historical research on medieval prognostication. It considers the entangled influences and transmissions between Christian, Jewish, Islamic, and non-monotheistic societies during the period from a wide range of perspectives. An international team of 63 renowned authors from about a dozen different academic disciplines contributed to this comprehensive overview.

America's Forgotten Pandemic Alfred W. Crosby 2003-07-21 Between August 1918 and March 1919 the Spanish influenza spread worldwide, claiming over 25 million lives - more people than perished in the fighting of the First World War. It proved fatal to at least a half-million Americans. Yet, the Spanish flu pandemic is largely forgotten today. In this vivid narrative, Alfred W. Crosby recounts the course of the pandemic during the panic-stricken months of 1918 and 1919, measures its impact on American society, and probes the curious loss of national memory of this cataclysmic event. This 2003 edition includes a preface discussing the then recent outbreaks of diseases, including the Asian flu and the SARS epidemic.

Caring Democracy Joan C. Tronto 2013-04-12 Americans now face a caring deficit: there are simply too many demands on people's time for us to care adequately for our children, elderly people, and ourselves. At the same time, political involvement in the United States is at an all-time low, and although political life should help us to care better, people see caring as unsupported by public life and deem the concerns of politics as remote from their lives. Caring Democracy argues that we need to rethink American democracy, as well as our fundamental values and commitments, from a caring perspective. The idea that production and economic life are the most important political and human concerns ignores the reality that caring, for ourselves and others, should be the highest value that shapes how we view the economy, politics, and institutions such as schools and the family. Care is at the center of our human lives, but Tronto argues it is currently too far removed from the concerns of politics. Caring Democracy traces the reasons for this disconnection and argues for the need to make care, not economics, the central concern of democratic political life. Joan C. Tronto is a Professor in the Political Science Department at the University of Minnesota. She is the author of *Moral Boundaries: A Political Argument for an Ethic of Care* (Routledge).

Schema Therapy for Borderline Personality Disorder Arnoud Arntz 2020-12-14 This is the second edition of the book that sparked the current wave of interest in schema therapy. Although schema therapy was originally developed by Jeff Young in the USA, it was not until

unprecedented outcome data was published from pioneering Dutch clinical trials with BPD patients that the clinical CBT community took serious notice. Schema therapy has now become one of the most popular forms of contemporary CBT. It has parallels to the 'third wave' of contextual behavioural science in that it develops traditional CBT in new directions, but while contextual behavioural science prioritises behavioural techniques based on acceptance and mindfulness, schema therapy is more cognitive and draws on elements of experiential learning, object relations and psychodynamic therapy in addition to traditional CBT. The first edition of this book has sold more than 3,000 copies at a steady rate of around 500 units per year since 2009.

Moral Understandings Margaret Urban Walker 2007-09-13 Walker's book proposes a view of morality and an approach to ethical theory which uses the critical insights of feminism and race theory to rethink the epistemological and moral position of the ethical theorist, and how moral theory is inescapably shaped by culture and history. This second, revised edition contains a new preface, a substantive postscript to Chapter 1 about "the subject of moral philosophy"; the addition of a new chapter on the importance of emotion in practices of responsibility; and the addition of an afterword, which responds to critics of the book.

Modeling and Simulation Hartmut Bossel 2018-10-08 Models and simulations of all kinds are tools for dealing with reality. Humans have always used mental models to better understand the world around them: to make plans, to consider different possibilities, to share ideas with others, to test changes, and to determine whether or not the development of an idea is feasible. The book *Modeling and Simulation* uses exactly the same approach except that the traditional mental model is translated into a computer model, and the simulations of alternative outcomes under varying conditions are programmed on the computer. The advantage of this method is that the computer can track the multitude of implications and consequences in complex relationships much more quickly and reliably than the human mind. This unique interdisciplinary text not only provides a self contained and complete guide to the methods and mathematical background of modeling and simulation software (SIMPAS) and a collection of 50 systems models on an accompanying diskette. Students from fields as

diverse as ecology and economics will find this clear interactive package an instructive and engaging guide.

The Berlin Aging Study Paul B. Baltes 2001-03-19 The present and future of our society are shaped by an ever-increasing proportion of old and very old people. The Berlin Aging Study is one of the largest interdisciplinary efforts to explore old age and aging. Unique aspects of the Berlin Aging Study are the spectrum of scientific disciplines involved, the range of discipline-specific and interdisciplinary research topics, the focus on very old age (70 to over 100 years), and the empirical reference to a representative heterogeneous urban population. The study's first cross-sectional findings on intellectual abilities, self and personality, social relationships, physical health, functional capacity, medical treatment, mental disorders such as depression and dementia, socioeconomic conditions, activities, everyday competence, subjective well-being, and gender differences are reported in depth in this book. The study was carried out in the context of the Berlin-Brandenburg Academy of Sciences study group on 'Aging and Social Development'. The authors primarily conduct their research at the Berlin Max Planck Institute for Human Development, the Free University of Berlin, and the Humboldt University, Berlin.

Ageing and Technology Emma Domínguez-Rué 2016-01-31 The booming increase of the senior population has become a social phenomenon and a challenge to our societies, and

technological advances have undoubtedly contributed to improve the lives of elderly citizens in numerous aspects. In current debates on technology, however, the »human factor« is often largely ignored. The ageing individual is rather seen as a malfunctioning machine whose deficiencies must be diagnosed or as a set of limitations to be overcome by means of technological devices. This volume aims at focusing on the perspective of human beings deriving from the development and use of technology: this change of perspective - taking the human being and not technology first - may help us to become more sensitive to the ambivalences involved in the interaction between humans and technology, as well as to adapt technologies to the people that created the need for its existence, thus contributing to improve the quality of life of senior citizens.

Mit dieser umzugehen und sie für die Arbeit in der Heilerziehungspflege fruchtbar zu machen, Gelingensbedingungen zu formulieren und auf kritische Weichenstellungen aufmerksam zu machen, leistet dieser Praxisband.

Living and Dying at Murray Manor Jaber F. Gubrium 2012-11-29 *Living and Dying at Murray Manor* is a classic text that documents how the "work" of everyday life in a nursing home is accomplished. Jaber F. Gubrium spent several months at a nursing home as a participant-observer, involved in activities ranging from performing menial "toileting" work to serving as a gerontologist at staff meetings. The result is not a survey of statistics about nursing homes but an examination of the social organization of care in a single home the author calls Murray Manor. Gubrium's research reveals how staff, clientele, relatives, visiting physicians, and funeral directors negotiated their respective roles, needs, and goals- and how, in the end, Murray Manor emerged as an organized social entity.

Science, Politics, and Gnosticism Eric Voegelin 2004-10-01 "Science, Politics and Gnosticism" comprises two essays by Eric Voegelin (1901-85), arguably one of the most provocative and influential political philosophers of the last century. In these essays, Voegelin contends that certain modern movements, including positivism, Hegelianism, Marxism, and the "God is dead" school, are variants of the gnostic tradition he identified in his classic work *The New Science of Politics*. Voegelin attempts to resolve the intellectual confusion that has resulted from the dominance of gnostic thought by clarifying the distinction between political gnosticism and the philosophy of politics."--BOOK JACKET.

Barbarian Spring Jonas Lüscher 2015-03-15 On a business trip to Tunisia, Preising, a leading Swiss industrialist, is invited to spend the week with the daughter of a local gangster. He accompanies her to the wedding of two London city traders at a desert luxury resort that was once the site of an old Berber oasis. With the wedding party in full swing and the bride riding up the aisle on a camel, no one is aware that the global financial system stands on the brink of collapse. As the wedding guests nurse their hangovers, they learn that the British pound has depreciated tenfold, and their world begins to crumble around them. So begins Barbarian Spring, the debut novel from Jonas Lüscher, a major emerging voice in European fiction. The timely and unusual novel centers on a culture clash between high finance and the

Designing Organizations Stefan Kuhl 2018-08 When (re-)designing organizations, one must first be clear about what is meant by the structures of an organization and what can be done in order to change them. In this book, we present communication channels, programs and personnel as central structures. We also unfold the aspects that come to the forefront when one focuses on either the formal, the informal or the display side of an organization. At the core, we elaborate on how structures cause blind spots, and how these can be utilized for processes of change.

Wisdom Luca Mazzinghi 2019-07-24 For the first time, the present commentary brings together all relevant aspects necessary to understand and appreciate this late portion of Old Testament Scripture: textual criticism; detailed philological and literary analysis; the text's two-fold historical context in its Hellenistic environment, on the one hand, and in the biblical tradition on the other; and ultimately the very innovative theology of the book of Wisdom. Aspects of the book's reception history as well as hermeneutical questions round off the commentary on the text.
