Curriculum Wesley Null 2016-12-13 This updated second edition of Curriculum: From Theory to Practice provides an introduction to curriculum theory and how it relates to classroom practice. Wesley Null builds upon recent developments while at the same time continuing to provide a unique organization of the curriculum field into five traditions: systematic, existential, radical, pragmatic, and deliberative. Null discusses the philosophical foundations of curriculum as well as historical and contemporary figures who have shaped each curriculum tradition. To ensure breadth and scope, Null has expanded this second edition to include figures not present in the first. Additionally, after a chapter on each of the five perspectives, Null presents case studies that describe realistic and specific curriculum problems that commonly arise within educational institutions at all levels. Scholars and practitioners alike are given opportunities to practice resolving curriculum problems through deliberation. Each case study focuses on a critical issue such as the implementation of curriculum standards, the attempt to reform core curriculum within universities, and the complex practice of curriculum making. In the final chapter, Null offers a vision for the curriculum field that connects curriculum deliberation with recent developments in moral philosophy.

Politics vs. Literature George Orwell 2021-01-01 George Orwell set out 'to make political writing into an art', and to a wide extent this aim shaped the future of English literature – his descriptions of authoritarian regimes helped to form a new vocabulary that is fundamental to understanding totalitarianism. While 1984 and Animal

Farm are amongst the most popular classic novels in the English language, this new series of Orwell's essays seeks to bring a wider selection of his writing on politics and literature to a new readership. Politics vs. Literature, the fourth in the Orwell's Essays series, is, at heart, a review of Jonathan Swift's Gulliver's Travels. Having been given a copy of the book on his eighth birthday, Orwell knows it inside out, and thinks highly of it; it is 'pessimistic', though, he says – 'it descends into political partisanship of a narrow kind,' designed to 'humiliate man by reminding him that he is weak and ridiculous.' Using the book as an example of enjoying a book whose author one cannot stand, Orwell goes on to say that he considers Gulliver's Travels a work of art, leaving the reader to reconsider the books on their own shelves. 'A writer who can – and must – be rediscovered with every age.' – Irish Times

Outliers Malcolm Gladwell 2008-11-18 From the bestselling author of Blink and The Tipping Point, Malcolm Gladwell's Outliers: The Story of Success overturns conventional wisdom about genius to show us what makes an ordinary person an extreme overachiever. Why do some people achieve so much more than others? Can they lie so far out of the ordinary? In this provocative and inspiring book, Malcolm Gladwell looks at everyone from rock stars to professional athletes, software billionaires to scientific geniuses, to show that the story of

success is far more surprising, and far more fascinating, than we could ever have imagined. He reveals that it's as much about where we're from and what we do, as who we are - and that no one, not even a genius, ever makes it alone. Outliers will change the way you think about your own life story, and about what makes us all unique. 'Gladwell is not only a brilliant storyteller; he can see what those stories tell us, the lessons they contain' Guardian 'Malcolm Gladwell is a global phenomenon ... he has a genius for making everything he writes seem like an impossible adventure' Observer 'He is the best kind of writer - the kind who makes you feel like you're a genius, rather than he's a genius' The Times

The Politics Aristotle 1981-09-17 Twenty-three centuries after its compilation, 'The Politics' still has much to contribute to this central question of political science. Aristotle's thorough and carefully argued analysis is based on a study of over 150 city constitutions, covering a huge range of political issues in order to establish which types of constitution are best - both ideally and in particular circumstances - and how they may be maintained. Aristotle's opinions form an essential background to the thinking of philosophers such as Thomas Aquinas, Machiavelli and Jean Bodin and both his premises and arguments raise questions that are as relevant to modern society as they were to the ancient world.

Making up Numbers: A History of Invention in Mathematics Ekkehard Kopp 2020-10-23 Making up Numbers: A History of Invention in Mathematics offers a detailed but accessible account of a wide range of mathematical ideas. Starting with elementary concepts, it leads the reader towards aspects of current mathematical research. The book explains how conceptual hurdles in the development of numbers and number systems were overcome in the course of history, from Babylon to Classical Greece, from the Middle Ages to the Renaissance, and so to the nineteenth and twentieth centuries. The narrative moves from the Pythagorean insistence on positive multiples to the gradual acceptance of negative numbers, irrationals and complex numbers as essential tools in quantitative analysis. Within this chronological framework, chapters are organised thematically, covering a variety of topics and contexts: writing and solving equations, geometric construction, coordinates and complex numbers, perceptions of 'infinity' and its permissible uses in mathematics, number systems, and evolving views of the role of axioms. Through this approach, the author demonstrates that changes in our understanding of numbers have often relied on the breaking of long-held conventions to make way for new inventions at once providing greater clarity and widening mathematical horizons. Viewed from this historical perspective, mathematical abstraction emerges as neither mysterious nor immutable, but as a contingent, developing human activity. Making up Numbers will be of great interest to undergraduate and A-level students of mathematics, as well as secondary school teachers of the subject. In virtue of its detailed treatment of mathematical ideas, it will be of value to anyone seeking to learn more about the development of the subject.

Experiencing Architecture, second edition Steen Eiler Rasmussen 1964-03-15 A classic examination of superb design through the centuries. Widely regarded as a classic in the field, Experiencing Architecture explores the history and promise of good design. Generously illustrated with historical examples of designing excellence—ranging from teacups, riding boots, and golf balls to the villas of Palladio and the fish-feeding pavilion of Beijing's Winter Palace—Rasmussen's accessible guide invites us to appreciate architecture not only as a profession, but as an art that shapes everyday experience. In the past, Rasmussen argues, architecture was not just an individual pursuit, but a community undertaking. Dwellings were built with a natural feeling for

place, materials and use, resulting in “a remarkably suitable comeliness.” While we cannot return to a former age, Rasmussen notes, we can still design spaces that are beautiful and useful by seeking to understand architecture as an art form that must be experienced. An understanding of good design comes not only from one’s professional experience of architecture as an abstract, individual pursuit, but also from one’s shared, everyday experience of architecture in real time—its particular use of light, color, shape, scale, texture, rhythm and sound. Experiencing Architecture reminds us of what good architectural design has accomplished over time, what it can accomplish still, and why it is worth pursuing. Wide-ranging and approachable, it is for anyone who has ever wondered “what instrument the architect plays on.”

A Distant Mirror Barbara W. Tuchman 1987-07-12 A “marvelous history”* of medieval Europe, from the bubonic plague and the Papal Schism to the Hundred Years’ War, by the Pulitzer Prize–winning author of *The Guns of August* *Lawrence Wright, author of *The End of October*, in *The Wall Street Journal* The fourteenth century reflects two contradictory images: on the one hand, a glittering age of crusades, cathedrals, and chivalry; on the other, a world plunged into chaos and spiritual agony. In this revelatory work, Barbara W. Tuchman examines not only the great rhythms of history but the grain and texture of domestic life: what childhood was like; what marriage meant; how money, taxes, and war dominated the lives of serf, noble, and clergy alike. Granting her subjects their loyalties, treacheries, and guilty passions, Tuchman re-creates the lives of proud cardinals, university scholars, grocers and clerks, saints and mystics, lawyers and mercenaries, and, dominating all, the knight—in all his valor and “furious follies,” a “terrible worm in an iron cocoon.” Praise for *A Distant Mirror* “Beautifully written, careful and thorough in its scholarship . . . What Ms. Tuchman does superbly is to tell how it was. . . . No one has ever done this better.”—*The New York Review of Books* “A beautiful, extraordinary book . . . Tuchman at the top of her powers . . . She has done nothing finer.”—*The Wall Street Journal* “Wise, witty, and wonderful . . . a great book, in a great historical tradition.”—*Commentary*

Biophysics William Bialek 2012-12-17 Interactions between the fields of physics and biology reach back over a

century, and some of the most significant developments in biology--from the discovery of DNA's structure to imaging of the human brain--have involved collaboration across this disciplinary boundary. For a new generation of physicists, the phenomena of life pose exciting challenges to physics itself, and biophysics has emerged as an important subfield of this discipline. Here, William Bialek provides the first graduate-level introduction to biophysics aimed at physics students. Bialek begins by exploring how photon counting in vision offers important lessons about the opportunities for quantitative, physics-style experiments on diverse biological phenomena. He draws from these lessons three general physical principles--the importance of noise, the need to understand the extraordinary performance of living systems without appealing to finely tuned parameters, and the critical role of the representation and flow of information in the business of life. Bialek then applies these principles to a broad range of phenomena, including the control of gene expression, perception and memory, protein folding, the mechanics of the inner ear, the dynamics of biochemical reactions, and pattern formation in developing embryos. Featuring numerous problems and exercises throughout, *Biophysics* emphasizes the unifying power of abstract physical principles to motivate new and novel experiments on biological systems. Covers a range of biological phenomena from the physicist's perspective Features 200 problems Draws on statistical mechanics, quantum mechanics, and related mathematical concepts Includes an annotated bibliography and detailed appendixes Instructor's manual (available only to teachers)

Convergence Culture Henry Jenkins 2008-09 "What the future fortunes of [Gramsci's] writings will be, we cannot know. However, his permanence is already sufficiently sure, and justifies the historical study of his international reception. The present collection of studies is an indispensable foundation for this." —Eric Hobsbawm, from the preface Antonio Gramsci is a giant of Marxian thought and one of the world's greatest cultural critics. Antonio A. Santucci is perhaps the world's preeminent Gramsci scholar. Monthly Review Press is proud to publish, for the first time in English, Santucci's masterful intellectual biography of the great

Sardinian scholar and revolutionary. Gramscian terms such as “civil society” and “hegemony” are much used in everyday political discourse. Santucci warns us, however, that these words have been appropriated by both radicals and conservatives for contemporary and often self-serving ends that often have nothing to do with Gramsci’s purposes in developing them. Rather what we must do, and what Santucci illustrates time and again in his dissection of Gramsci’s writings, is absorb Gramsci’s methods. These can be summed up as the suspicion of “grand explanatory schemes,” the unity of theory and practice, and a focus on the details of everyday life. With respect to the last of these, Joseph Buttigieg says in his Nota: “Gramsci did not set out to explain historical reality armed with some full-fledged concept, such as hegemony; rather, he examined the minutiae of concrete social, economic, cultural, and political relations as they are lived in by individuals in their specific historical circumstances and, gradually, he acquired an increasingly complex understanding of how hegemony operates in many diverse ways and under many aspects within the capillaries of society.” The rigor of Santucci’s examination of Gramsci’s life and work matches that of the seminal thought of the master himself. Readers will be enlightened and inspired by every page.

Human Accomplishment Charles Murray 2009-10-13 A sweeping cultural survey reminiscent of Barzun's *From Dawn to Decadence*. "At irregular times and in scattered settings, human beings have achieved great things. Human Accomplishment is about those great things, falling in the domains known as the arts and sciences, and the people who did them.' So begins Charles Murray's unique account of human excellence, from the age of Homer to our own time. Employing techniques that historians have developed over the last century but that have rarely been applied to books written for the general public, Murray compiles inventories of the people who have been essential to the stories of literature, music, art, philosophy, and the sciences—a total of 4,002 men and women from around the world, ranked according to their eminence. The heart of *Human Accomplishment* is a series of enthralling descriptive chapters: on the giants in the arts and what sets them apart from the merely great; on the differences between great achievement in the arts and in the sciences; on the meta-inventions, 14 crucial leaps in human capacity to create great art and science; and on the patterns and trajectories of accomplishment across time and geography. Straightforwardly and undogmatically, Charles Murray takes on some controversial questions. Why has accomplishment been so concentrated in Europe? Among men? Since 1400? He presents evidence that the rate of great accomplishment has been declining in the last century, asks what it means, and offers a rich framework for thinking about the conditions under which the human spirit has expressed itself most gloriously. Eye-opening and humbling, *Human Accomplishment* is a fascinating work that describes what humans at their best can achieve, provides tools for exploring its wellsprings, and celebrates the continuing common quest of humans everywhere to discover truths, create beauty, and apprehend the good.

Seeing Like a State James C. Scott 2020-03-17 “One of the most profound and illuminating studies of this century to have been published in recent decades.”—John Gray, *New York Times Book Review* Hailed as “a magisterial critique of top-down social planning” by the *New York Times*, this essential work analyzes disasters from Russia to Tanzania to uncover why states so often fail—sometimes catastrophically—in grand efforts to engineer their society or their environment, and uncovers the conditions common to all such planning disasters. “Beautifully written, this book calls into sharp relief the nature of the world we now

inhabit.”—New Yorker “A tour de force.”— Charles Tilly, Columbia University

Food and the City in Europe since 1800 Peter Lummel 2012-11-28 This fascinating volume examines the impact that rapid urbanization has had upon diets and food systems throughout Western Europe over the past two centuries. Bringing together studies from across the continent, it stresses the fundamental links between key changes in European social history and food systems, food cultures and food politics. Contributors respond to a number of important questions, including: when and how did local food production cease to be sufficient for the city and when did improved transport conditions and liberal commercial relations replace local by supra-regional food supplies? How far did the food industry contribute to improved living conditions in cities? What influence did urban consumers have? **Food and the City in Europe since 1800** also examines issues of food hygiene and health impacts in cities, looks at various food innovations and how ‘new’ foods often first gained acceptance in cities, and explores how eating fashions have changed over the centuries.
