*Atlas d'anatomie générale et radiologique* Jean-Philippe Dillenseger 2019-05-06 Cet atlas propose sous forme didactique une magnifique synthèse d'anatomie et de radioanatomie. Organisé autour des six grandes régions anatomiques (membre supérieur, membre inférieur, colonne vertébrale et moelle spinale, thorax, abdomen-pelvis, tête et cou) en suivant celle des unités d'enseignements (UE 2.1, 2.2 et 2.3) des référentiels de formation initiale des manipulateurs en électroradiologie médicale (MERM), il repose sur une double articulation : l'anatomie générale sous forme de dessins largement légendés ; l'anatomie radiologique sous forme de coupes d'imagerie (TDM, IRM), de reconstructions et

de radiographies également largement légendées, d'une qualité exceptionnelle. Particulièrement graphique avec plus de 650 illustrations en couleurs, cette seconde édition a été entièrement revue et corrigée, la plupart des schémas ont été renouvelés et les coupes TDM et IRM actualisées. Cet atlas permet ainsi une étude approfondie et rigoureuse de la morphologie humaine. Dans la même lignée que le Guide des technologies de l'imagerie médicale et de la radiothérapie, cet ouvrage pédagogique se révèle un outil indispensable pour les manipulateurs en radiologie (MERM), mais également pour les radiologues en tant qu'ouvrage de référence.

**Bones, Bodies and Behavior** George W. Stocking 1990-08-28 History of Anthropology is a series of annual volumes, inaugurated in 1983, each broadly unified around a theme of major importance to both the history and the present practice of anthropological inquiry. Bones, Bodies, Behavior, the fifth in the

series, treats a number of issues relating to the history of biological or physical anthropology: the application of the "race" idea to humankind, the comparison of animals minds to those of humans, the evolution of humans from primate forms, and the relation of science to racial ideology. Following an introductory overview of biological anthropology in Western tradition, the seven essays focus on a series of particular historical episodes from 1830 to 1980: the emergence of the race idea in restoration France, the comparative psychological thought of the American ethnologist Lewis Henry Morgan, the archeological background of the forgery of the remains "discovered" at Piltdown in 1912, their impact on paleoanthropology in the interwar period, the background and development of physical anthropology in Nazi Germany, and the attempts of Franx Boas and others to organize a consensus against racialism among British and American scientists in the late 1930s. The volume concludes with a provocative essay on physical anthropology and primate studies in the United States in the years since such a consensus was established by the UNESCO "Statements on Race" of 1950 and 1951. Bringing together the contributions of a physical anthropologist (Frank Spencer), a historical sociologist (Michael Hammond), and a number of historians of science (Elazar Barkan, Claude Blanckaert, Donna Haraway, Robert Proctor, and Marc Swetlitz), this volume will appeal to a wide range of students, scholars, and general readers interested in the place of biological assumptions in the modern anthropological tradition, in the biological bases of human behavior, in racial ideologies, and in the development of the modern human sciences.

The Substantive Law of the EU Catherine Barnard 2007 This book focuses on the substantive law of the EU with regard to the free movement of goods, persons, services, and capital. An introductory chapter outlines the background to EU law in this sphere; the role of free trade theory, the development of economic integration until the present day, and the fundamental principles underpinning this development. The following sections then provide a detailed examination of the major categories - goods, persons, services and capital - and a concluding section deals with the legal issues raised by the ongoing process of harmonisation within the single market. The author makes judicious use of case studies to illustrate and develop central issues, diagrams and flowcharts to clarify the more complex areas of this sphere of EU law. *Curiosity* Alberto Manguel 2015-01-01 An eclectic history of human curiosity, a great feast of ideas, and a memoir of a reading life from an internationally celebrated reader and thinker Curiosity has been seen through the ages as the impulse that drives our knowledge forward and the temptation that leads us toward dangerous and forbidden waters. The question "Why?" has appeared under a multiplicity of guises and in vastly different contexts throughout the chapters of human history. Why does evil exist? What is beauty? How does language inform us? What defines our identity? What is our responsibility to the world? In Alberto Manguel's most personal book to date, the author tracks his own life of curiosity through the reading that has mapped his way. Manguel chooses as his guides a selection of writers who sparked his imagination. He dedicates each chapter to a single thinker, scientist, artist, or other figure who demonstrated in a fresh way how to ask "Why?" Leading us through a full gallery of inquisitives, among them Thomas Aquinas, David Hume, Lewis Carroll, Rachel

Carson, Socrates, and, most importantly, Dante, Manguel affirms how deeply connected our curiosity is to the readings that most astonish us, and how essential to the soaring of our own imaginations.

**Objectivity** Lorraine Daston 2021-02-02 Objectivity has a history, and it is full of surprises. In *Objectivity*, Lorraine Daston and Peter Galison chart the emergence of objectivity in the mid-nineteenth-century sciences – and show how the concept differs from alternatives, truth-to-nature and trained judgment. This is a story of lofty epistemic ideals fused with workaday practices in the making of scientific images. From the eighteenth through the early twenty-first centuries, the images that reveal the deepest commitments of the empirical sciences – from anatomy to crystallography – are those featured in scientific atlases: the compendia that teach practitioners of a discipline what is worth looking at and how to look at it. Atlas images define the working objects of the sciences of the eye: snowflakes, galaxies, skeletons, even elementary particles. Galison and Daston use atlas images to uncover a hidden history of scientific objectivity and its rivals. Whether an atlas maker idealizes an

image to capture the essentials in the name of truth-to-nature or refuses to erase even the most incidental detail in the name of objectivity or highlights patterns in the name of trained judgment is a decision enforced by an ethos as well as by an epistemology. As Daston and Galison argue, atlases shape the subjects as well as the objects of science. To pursue objectivity – or truth-to-nature or trained judgment – is simultaneously to cultivate a distinctive scientific self wherein knowing and knower converge. Moreover, the very point at which they visibly converge is in the very act of seeing not as a separate individual but as a member of a particular scientific community. Embedded in the atlas image, therefore, are the traces of consequential choices about knowledge, persona, and collective sight. Objectivity is a book addressed to any one interested in the elusive and crucial notion of objectivity – and in what it means to peer into the world scientifically.

**The Order of Things** Michel Foucault 2005-08-18 When one defines "order" as a sorting of priorities, it becomes beautifully clear as to what Foucault is doing here. With virtuoso showmanship, he weaves an intensely complex history of thought. He dips into literature, art, economics and even biology in *The Order of Things*, possibly one of the most significant, yet most overlooked, works of the twentieth century. Eclipsed by his later work on power and discourse, nonetheless it was *The Order of Things* that established Foucault's reputation as an intellectual giant. Pirouetting around the outer edge of language, Foucault unsettles the surface of literary writing. In describing the limitations of our usual taxonomies, he opens the door onto a whole new system of thought, one ripe with what he calls "exotic charm". Intellectual pyrotechnics from the master of critical thinking, this book is crucial reading for those who wish to gain insight into that odd beast called Postmodernism, and a must for any fan of Foucault.
