The Monkey's Voyage Alan de Queiroz 2014-01-07 Throughout the world, closely related species are found on landmasses separated by wide stretches of ocean. What explains these far-flung distributions? Why are such species found where they are across the Earth? Since the discovery of plate tectonics, scientists have conjectured that plants and animals were scattered over the globe by riding pieces of ancient supercontinents as they broke up. In the past decade, however, that theory has foundered, as the genomic revolution has made reams of new data available. And the data has revealed an extraordinary, stranger-than-fiction story that has sparked a scientific upheaval. In *The Monkey's Voyage*, biologist Alan de Queiroz describes the radical new view of how fragmented distributions came into being: frogs and mammals rode on rafts and icebergs, tiny spiders drifted on storm winds, and plant seeds were carried in the plumage of sea-going birds to create the map of life we see today. In other words, these organisms were not simply constrained by continental fate; they were the makers of their own geographic destiny. And as de Queiroz shows, the effects of oceanic dispersal have been crucial in generating the diversity of life on Earth, from monkeys and guinea pigs in South America to beech trees and kiwi birds in New Zealand. By toppling the idea that the slow process of continental drift is the main force behind the odd distributions of organisms, this theory highlights the dynamic and unpredictable nature of the history of life. In the tradition of John McPhee's *Basin and Range*, *The Monkey's Voyage* is a beautifully told narrative that strikingly reveals the importance of contingency in history and the nature of scientific discovery.

**Construction Technology for Builders** Glenn Costin 2020-06-26 Construction Technology for Builders, 1e addresses requirements of the Certificate IV in Building and Construction (Building). The text addresses 14 competency units with learning activities and work sheets for downloading. The chapters are aligned to specific competency units, and the material in this text requires, and emphasises that the reader engage with Standards and Codes such as the NCC. Communication is a critical component of the building and construction process and the preparation of sketches and drawings is a vital part of that communication skill set; the text has a dedicated chapter on preparing building sketches and drawings. There are two chapters on structures, the first introducing the concepts underlying structural principles, and underpins the following chapter that applies this knowledge to the various elements of a building. Additional learning material, such as plans and specifications is provided in the Appendices to assist with the understanding of examples and exercises in the text.

University Physics: Australian edition Hugh D Young 2010-08-04 This book is the product of more than half a century of leadership and innovation in physics education. When the first edition of University Physics by Francis W. Sears and Mark W. Zemansky was published in 1949, it was revolutionary among calculus-based physics textbooks in its emphasis on the fundamental principles of physics and how to apply them. The success

of University Physics with generations of (several million) students and educators around the world is a testament to the merits of this approach and to the many innovations it has introduced subsequently. In preparing this First Australian SI edition, our aim was to create a text that is the future of Physics Education in Australia. We have further enhanced and developed University Physics to assimilate the best ideas from education research with enhanced problem-solving instruction, pioneering visual and conceptual pedagogy, the first systematically enhanced problems, and the most pedagogically proven and widely used online homework and tutorial system in the world, Mastering Physics.

Participant Observer Robin Fox 2017-10-24 Robin Fox, one of the preeminent anthropologists of our time, takes us on an exuberant personal, intellectual and cultural journey through the 1930s to the 1970s. This is a personal, historical, intellectual journey, one that is at once intriguing, hilarious, and moving. Like Browning's Sordello (who recurs throughout the book), Fox is telling the story of "the development of a soul." Fox's method is to depend entirely on memory to select the people, events, and ideas that have driven him towards what was called at the time a "revolution in the social sciences." This revolution was the founding of the biosocial, or what came to be called the sociobiological, movement in the study of human behavior. It was a long road peppered with strange events, brain-bending ideas, odd adventures, dangers and sorrows, and a cast of lively, often eccentric characters. Fox describes himself as an observer of a series of endings: the last gasps of now extinct ways of life. He witnessed the last of the old steam and horse-powered northern wool towns of the industrial revolution and the pre-industrial Hardy countryside of southern England. He saw the ancient grammar schools before their destruction by doctrinaire socialism; the old LSE when it was still an international family, not just a big college; the brave but failed experiment that was Talcott Parsons' Social Relations Department. In the United States, he experienced the innocent but troubled America of the 1950s and the last gasp of traditional Indian life in New Mexico. He lived in genteel Jane Austen England in Devon and experienced peasant-crofter life in the Irish islands. Participant Observer is a report from the cultural and social battlefield, seen through the personal lens of a combatant. Fox has given us a kind of Cook's Tour through the ideas and intellectual movements of mid-century, when the world changed and the foundations of the twenty-first century were set. It is the history of an education by a narrator in love with learning.

**Architecture in Dialogue with an Activated Ground** Urs Bette 2020-03-30 Architecture in Dialogue with an Activated Ground sets out to validate the role of the unreasonable in the design process. Using case study projects, architect Urs Bette gives an insight into the epistemological processes of his creative practice, and unveils the strategies he deploys in order to facilitate the poetic aspects of architecture within a discourse whose evaluation parameters predominantly involve reason. Themes discussed include the emergence of space from the staged opposition between the architectural object and the site, and the relationship between emotive cognition and analytic synthesis in the design act. In both cases, there is a necessary engagement with forms of 'unreasonable' thought, action or behaviours. By arguing for the usefulness and validity of the unreasonable in architecture, and by investigating the performative relationship between object and ground, Bette contributes to the discourse on extensions, growth and urban densification that tap into local histories and voices, including those of the seemingly inanimate – the architecture itself and the ground it sits upon – to inform the site-related production of architectural character and space. In doing so, he raises debates about the values pursued

in design approval processes, and the ways in which site-relatedness is both produced and judged.
