Taxploitation Peter Saunders 2006 In this new book, ten eminent authors explain why and how Australia's system of personal income tax needs reforming. The total tax take in Australia is around the OECD average, but tax on people's incomes is well above average. High income taxes undermine national prosperity. The top rate is out of line with most other western countries, which have been moving to lower and flatter rates. Because the threshold at which people start to pay tax is well below subsistence, people are taxed before they have earned enough to keep body and soul together. The interaction of tax and welfare creates dispiritingly high 'effective marginal tax rates' which deter people on welfare from looking for work and penalize low-wage families whenever they try to increase their take-home pay. The system is riddled with distortions and disincentive effects. There are so many special allowances, exemptions, credits, offsets and write-offs that tax law has become almost indecipherable, and gross amounts of money and time get spent trying to reduce liability to tax. Most really-high earners are paying a lower rate of tax than workers earning little more than average income. Retirement savings are viciously taxed, and because tax brackets are not indexed to inflation, the total tax-take increases year by year without anybody even realizing it. Outside of the federal government there is a mounting demand that something radical needs to be done to tackle these problems. This book looks at the options and demonstrates that the case for radical reform is now unanswerable. The Contributors: Peter Burn - National Senior Adviser, Australian Industry Group

Dem jeweiligen Kapitel stellt der Autor international diskutierte Lösungsansätze voran, bevor er das australische und deutsche Recht darstellt und in einer vergleichenden Betrachtung zusammenführt.

Taxation in ASEAN and China Nolan Sharkey 2012-05-31 China and the ASEAN region have risen rapidly to a position of immense economic significance in the global economy. Academics, policy makers and businesses are all keen to understand more about taxation in China and ASEAN, and this work seeks to address this key issue by providing a comprehensive overview of the many often mentioned but little understood challenges of doing business in the region. Traversing a wide range of regional issues and jurisdictions, topics covered include the role of DTAs in regional integration, the impact of social institutions on tax, corruption and its causes, economic development and taxation and the use of education in developing systems. Case studies are taken from countries such as China, Vietnam, Hong Kong, Singapore, the Philippines, Malaysia and Indonesia. Drawing on the results of these discussions, the book also sheds light on the question of whether different taxing institutions are needed in the region. Gathering together a cross-disciplinary group of eminent scholars, this work will be of great interest to all students and scholars of Asian economics, Asian finance and taxation in general.

[T]axing Greenhouse Gases Lex Fullarton 2019-03-30 Lex Fullarton takes a closer look at the three pillars of the sustainable development framework known as the Triple Bottom Line (TBL). The concept of the TBL is that for a project to be sustainable it must not simply be profitable in economic terms, but it must also benefit society and enhance the natural environment. In the 21st century, the greatest threat to Earth's natural environment and the population of the planet is the rise of greenhouse gas emissions caused from burning fossil fuel as an energy source. The rise of GHG emissions has resulted in a rise in the ambient air temperature of the Earth's atmosphere and is resulting in a significant change in climatic conditions on Earth. Fullarton scrutinizes the problem of getting industry and governments to understand the significance of creating harmony within the TBL. One of the main problems is that partisan politics tends to fragment the factors of the TBL rather than bring them together. Fullarton takes a strong stand in suggesting that taxation systems, which have traditionally been viewed primarily as a means of raising government finance, can be effectively applied to influence industrial and consumer attitudes towards transiting away from polluting fossil-fuel energy sources towards non-polluting renewable energy use.

Comparative Income Taxation Brian J. Arnold 2019-12-09 Comparative Income Taxation A Structural Analysis Fourth Edition Hugh J. Ault, Brian J. Arnold & Graeme S. Cooper In complex national income tax systems, structural and design variations from one country to another present major obstacles to the kind of comparative understanding that economic globalization requires. Hence the great significance of this outstanding book, highly acclaimed through three previous editions and now thoroughly updated to encompass the latest changes and trends. In it, leading authorities from eleven of the world's most important national taxation systems each contribute their particular expertise to a study of specific crucial problems of tax design. In addition to the nine countries covered in previous editions—Australia, Canada, France, Germany, Japan, the Netherlands, Sweden, the United Kingdom and the United States—China and India have now been added to provide the perspective of developing countries. Individually authored country descriptions outline the climate and institutional framework in which each of the eleven national taxation systems' substantive rules operate. All the country descriptions are analyzed in accordance with a common format to facilitate comparisons of the ways in which the countries' tax systems are similar and in which they differ. They form the background to an expertly informed comparative analysis focusing on three major areas: basic income taxation, taxation of business organizations and international taxation. Most of the rules especially important for international business and investment are dealt with here, including (among many others) rules on the following: classification of business entities;

taxation of corporations and their shareholders; corporate organization and restructuring; taxation of partnerships; residence and source taxation; controlled foreign company rules; restrictions on the deduction of interest; courts dealing with tax matters; and effect of tax treaties. Several new topics—including the classification of employees and independent contractors, the taxation of pensions, patent box regimes, the taxation of indirect transfers and the tax challenges of the digital economy—have been added. Especially timely are discussions of changes stemming from the G20/OECD Base Erosion and Profit Shifting project. The introduction has also been expanded to include a new section on European Union (EU) law as it affects the tax laws of EU Member States. This new edition of a classic source of information and analysis for students, professors, researchers, tax practitioners and tax policy officials on the different ways that countries design their income tax systems will be widely welcomed by the international tax community.

International Trade and Business Law Annual 2003

Advance Pricing Agreements Michelle Markham 2012-06-28 Transfer pricing (the

pricing of cross-border intra-firm transactions between related parties) is now the top international tax issue faced by multinational enterprises. In an international taxation environment characterized by rigorous enforcement of transfer pricing documentation, disclosure, and audit processes, a need has arisen for multinationals to be cognizant of the impact of their 'tax risk appetite' on their relationship with taxation authorities and to be aware of how best to manage their transfer pricing arrangements. The most promising development has been the growing commitment to Advance Pricing Agreements (APAs) – arrangements made prospectively between a multinational taxpayer and one or more revenue authorities, agreeing on an appropriate set of criteria for the determination of the transfer pricing of the covered transactions over a period of time. This is the first book to offer expert insights on APAs from a practical perspective. By focusing on the United States and Australia, the two countries that were at the forefront of adopting APAs and whose wealth of experience over two decades confirms their APA programs as the global paradigms, the author is able to highlight the advantages and disadvantages of pursuing an APA and to shed light on the powerful efficacy of this strategy for avoiding transfer pricing disputes. In addition, the author enlists the views of revenue authorities, transfer pricing practitioners, and corporate counsel who deal with the realities of transfer pricing assessment and compliance on an ongoing basis, offering acute insight into how APAs really work in a practical way. This book contributes to the body of knowledge on APAs in the context of transfer pricing by providing in-depth scrutiny of the most important issues surrounding this critical area, and by examining innovations in APAs in the United States and in Australia. Its unmatched coverage will be welcomed by tax experts at law firms and multinational companies as well as by revenue officials, policymakers, and scholars and researchers in international taxation.

Artful Aussie Tax Dodger Lex Fullarton 2017-05-30 In The Artful Aussie Tax Dodger, Lex Fullarton studies the impact of 100 years of taxation legislation in Australia, from 1915 to 2016. He finds that despite the lessons of a century of taxpayers and administrators' actions and reactions, old habits are hard to break. Driven by the winds of various political and social interests, Australia embarked on a century of tax reform from the moment when its first Income Tax Assessment Act was introduced. Fullarton discusses the oldest of tax planning

entities, the British Trust, the introduction of Australia's 'reformed' consumption tax, its VAT, referred to as Goods and Services Tax, an analysis of tax avoidance schemes, and finally government taxation reform. This book looks at how Australia's tax legislation was grounded, added to, avoided, and evolved, until it went 'Back to the Future'. It is a collection of studies compiled from experience and research conducted over twenty years of involvement in taxation law in rural and remote Australia.
