Putting Purpose Into Practice Colin Mayer 2021-03-02 In the face of constant change, the nature of business must evolve rapidly if it is to remain relevant to society at large. How then should business change to meet the requirements of the 21st century, in which unbridled globalization and technological advancements are having profound affects on the wellbeing and prosperity of both the people and the planet? The achievement of purpose is the key to successful transformation - not just having a purpose, but making that purpose real at every level of the organization. This is the first book to provide a precise description of how companies can put purpose into practice. Based on a groundbreaking research project undertaken jointly between the Saïd Business School at the University of Oxford and Mars Catalyst, the think tank of Mars Inc., it provides a highly accessible account of how companies should determine and implement their corporate purposes. It outlines why corporate purpose is so important and how it can both address the major challenges the world faces today and deliver enhanced performance for business. Fourteen detailed case studies illustrate how companies of different sizes, sectors, and geographies have put purpose into practice and their experiences of doing so. These cases give deep insights into the way in which companies can build purposeful businesses, map and shape their ecosystems, identify failures and problems, align management, and create partnerships to deliver their purposes against which they can measure their performance. The achievement of purpose is a very real issue that every responsible leader in business, finance, and business academia must now face. This book will equip executives, managers, investors, and policymakers with the tools that they require to understand how the notion of corporate purpose should become a corporate reality.

Social Mobility in Developing Countries Vegard Iversen 2022-01-06 Social mobility is the hope of economic development and the mantra of a good society. There are disagreements about what constitutes social mobility, but there is

broad agreement that people should have roughly equal chances of success regardless of their economic status at birth. Concerns about rising inequality have engendered a renewed interest in social mobility--especially in the developing world. However, efforts to construct the databases and meet the standards required for conventional analyses of social mobility are at a preliminary stage and need to be complemented by innovative, conceptual, and methodological advances. If forms of mobility have slowed in the West, then we might be entering an age of rigid stratification with defined boundaries between the always-haves and the never-haves-which does not augur well for social stability. Social mobility research is ongoing, with substantive findings in different disciplines--typically with researchers in isolation from each other. A key contribution of this book is the pulling together of the emerging streams of knowledge. Generating policy-relevant knowledge is a principal concern. Three basic questions frame the study of diverse aspects of social mobility in the book. How to assess the extent of social mobility in a given development context when the datasets by conventional measurement techniques are unavailable? How to identify drivers and inhibitors of social mobility in particular developing country contexts? How to acquire the knowledge required to design interventions to raise social mobility, either by increasing upward mobility or by lowering downward mobility?

Arbitrary States Rebecca Tapscott 2021 In recent years, scholars have noted the rise of a particular type of authoritarianism worldwide, in which rulers manipulate institutions designed to implement the rule of law so that they instead facilitate the exercise of arbitrary power. Even as scholars puzzle over this seemingly new phenomenon, scholarship on African politics offers helpful answers. This book places literature on the post-colonial African state in conversation with literature on modern authoritarianism, using this to frame over ten months of qualitative field research on Uganda's informal security actors - including vigilante groups, local militias, and community police. Based on this research, the book presents an original framework - called 'institutionalized arbitrariness' - to explain how modern authoritarian rulers project arbitrary power even in environments of relatively functional state institutions, checks and balances and the rule of law. In regimes characterized by institutionalized arbitrariness, the state's stochastic assertions and withdrawals of power inject unpredictability into the political relationship between both local authorities and citizens. This arrangement makes it difficult for citizens to predict which authority, if any, will claim jurisdiction in a given scenario, and what rules will apply. This environment of pervasive political unpredictability limits space for collective action and political claim-making, while keeping citizens marginally engaged in the democratic process. The book is grounded in empirical research and literature theorizing the African state, while seeking to inform a broader debate about contemporary forms of authoritarianism, state-building, and state consolidation. Oxford Studies in African Politics and International Relations is a series for scholars and students working on African politics and International Relations and related disciplines. Volumes concentrate on contemporary developments in African political science, political economy, and

International Relations, such as electoral politics, democratization, decentralization, gender and political representation, the political impact of natural resources, the dynamics and consequences of conflict, comparative political thought, and the nature of the continent's engagement with the East and West. Comparative and mixed methods work is particularly encouraged, as is interdisciplinary research and work that considers ethical issues relating to the study of Africa. Case studies are welcomed but should demonstrate the broader theoretical and empirical implications of the study and its wider relevance to contemporary debates. The focus of the series is on sub-Saharan Africa, although proposals that explain how the region engages with North Africa and other parts of the world are of interest. Series Editors: Nic Cheeseman, Professor of Democracy and International Development, University of Birmingham; Peace Medie, Senior Lecturer in Gender and International Politics, University of Bristol; and Ricardo Soares de Oliveira, Professor of the International Politics of Africa, University of Oxford. Sovereign Debt Diplomacies Pierre Penet 2021-03-12 This is an open access title available under the terms of a CC BY-NC-ND 4.0 International licence. It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations. Sovereign Debt Diplomacies aims to revisit the meaning of sovereign debt in relation to colonial history and postcolonial developments. It offers three main contributions. The first contribution is historical. The volume historicises a research field that has so far focused primarily on the post-1980 years. A focus on colonial debt from the 19th century building of colonial empires to the decolonisation era in the 1960s-70s fills an important gap in recent debt historiographies. Economic historians have engaged with colonialism only reluctantly or en passant, giving credence to the idea that colonialism is not a development that deserves to be treated on its own. This has led to suboptimal developments in recent scholarship. The second contribution adds a 'law and society' dimension to studies of debt. The analytical payoff of the exercise is to capture the current developments and functional limits of debt contracting and adjudication in relation to the long-term political and sociological dynamics of sovereignty. Finally, Sovereign Debt Diplomacies imports insights from, and contributes to the body of research currently developed in the Humanities under the label 'colonial and postcolonial studies'. The emphasis on 'history from

below' and focus on 'subaltern agency' usefully complement the traditional elite-perspective on financial imperialism favoured by the British school of empire history.

Explaining Imagination Peter Langland-Hassan 2020 This is an open access title available under the terms of a CC BY-NC-ND 4.0 International licence. It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations. Imagination will remain a mystery--we will not be able to explain imagination--until we can break it into parts we already understand. Explaining Imagination is a guidebook for doing just that, where the parts are other ordinary mental states like beliefs, desires, judgments, and decisions. In different combinations and contexts, these states constitute cases of imagining. This reductive approach to imagination is at direct odds with the current orthodoxy, according to which imagination is a sui

generis mental state or process--one with its own inscrutable principles of operation. Explaining Imagination upends that view, showing how, on closer inspection, the imaginings at work in hypothetical reasoning, pretense, the enjoyment of fiction, and creativity are reducible to other familiar mental states--judgments, beliefs, desires, and decisions among them. Crisscrossing contemporary philosophy of mind, cognitive science, and aesthetics, Explaining Imagination argues that a clearer understanding of imagination is already well within reach.

Making AI Intelligible Herman Cappelen 2021 Can humans and artificial intelligences share concepts and communicate? One aim of *Making AI Intelligible* is to show that philosophical work on the metaphysics of meaning can help answer these questions. Cappelen and Dever use the externalist tradition in philosophy of to create models of how AIs and humans can understand each other. In doing so, they also show ways in which that philosophical tradition can be improved: our linguistic encounters with AIs reveal that our theories of meaning have been excessively anthropocentric. The questions addressed in the book are not only theoretically interesting, but the answers have pressing practical implications. Many important decisions about human life are now influenced by AI. In giving that power to AI, we presuppose that AIs can track features of the world that we care about (e.g. creditworthiness, recidivism, cancer, and combatants.) If AIs can share our concepts, that will go some way towards justifying this reliance on AI. The book can be read as a proposal for how to take some first steps towards achieving interpretable AI. *Making AI Intelligible* is of interest to both philosophers of language and anyone who follows current events or interacts with AI systems. It illustrates how philosophy can help us understand and improve our interactions with AI.

African Economic Development Christopher Cramer 2020 "This book challenges conventional wisdoms about economic performance and possible policies for economic development in African countries. Its starting point is the striking variation in African economic performance. Unevenness and inequalities form a central fact of African economic experiences. The authors highlight not only differences between countries, but also variations within countries, differences often organized around distinctions of gender, class, and ethnic identity. For example, neo-natal mortality and school dropout have been reduced, particularly for some classes of women in some areas of Africa. Horticultural and agribusiness exports have grown far more rapidly in some countries than in others. These variations (and many others) point to opportunities for changing performance, reducing inequalities, learning from other policy experiences, and escaping the ties of structure, and the legacies of a colonial past. The book rejects teleological illusions and Eurocentric prejudice, but it does pay close attention to the results of policy in more industrialized parts of the world. Seeing the contradictions of capitalism for what they are - fundamental and enduring - may help policy officials protect themselves against the misleading idea that development can be expected to be a

smooth, linear process, or that it would be were certain impediments suddenly removed. The authors criticize a wide range of orthodox and heterodox economists, especially for their cavalier attitude to evidence. Drawing on their own decades of research and policy experience, they combine careful use of available evidence from a range of African countries with political economy insights (mainly derived from Kalecki, Kaldor and Hirschman) to make the policy case for specific types of public sector investment"--
