Analysis of Math Skills and Math Curriculum at St. Anthony High School in Milwaukee, in Relationship to the ACT WorkKeys Applied Mathematics Assessment Albana Kume-Robertson 2016 In the U.S., many employees who enter the workforce after graduating from high school do not possess the basic math skills required for employment and promotion. Juniors in high school take ACT WorkKeys Applied Mathematics assessment to demonstrate their readiness for the workplace. However, the overall scores of this test do not indicate which specific math skills students are lacking. This study had the purpose to analyze the math skills mastered by 58 junior students at St. Anthony High School in Milwaukee using a practice test modelled after the ACT WorkKeys Applied Mathematics exam, and to identify any gaps in the math skill levels assessed by this exam with the math curriculum taught at St. Anthony High School utilizing curriculum mapping. The curriculum mapping did not reveal gaps between the math skills taught and the math skills assessed by ACT WorkKeys Applied Mathematics exam, but scores on the practice test showed that participating students lacked many of the basic math skills required for successful employment. Study recommendations include addressing math curriculum areas that need to be taught differently to prepare students in skills they are lacking and actions to raise awareness about the importance of math skills in the workplace.
