Progress in Lens and Cataract Research Kazuyuki Sasaki 2002-01-01 Understanding cataract risk factors is a vital topic in preventative medicine and offers hope to the multitude of people in the world who cannot be aided by an intraocular lens implantation. In the multifaceted process of cataract development ultraviolet radiation is one of the important risk factors. This publication focuses on clinical studies, epidemiologic data as well as experimental approaches to ultraviolet radiation and its effects on the lens. Further articles discuss the cataract epidemiology and the biochemistry of the lens. In addition lens research in the 20th century is evaluated with regard to methods and results. The book is dedicated to Professor K. Sasaki from the University of Ishikawa (Japan) and his research over the last twenty years. Ophthalmologists in practice as well as those involved in lens and cataract research or interested in the mechanisms and the pathogenesis of lens opacification in old age will find a wealth of information in this volume. Likewise, it will be essential to physicians working in public health services, environmental medicine, and those concerned with eye damage caused by radiation.

Travel Guide To Europe, 1492 Lorenzo Camusso 2013-12-24 On the eve of the five hundredth anniversary of the discovery of the Americas, it bears remembering that in 1492, as Columbus was making his historic voyage, Europe was flourishing, at the very height of the Renaissance that transformed a continent. In art, politics, commerce, and society, the medieval world had given way to the modern era. But what was Europe really like then? What did London, Paris, Rome, and the other great centers of culture actually look like, and what was it like to travel from one to the other when the horse and the sailing ship were the most expeditious means available? How long would a typical journey take? Where would one stay and what could one eat along the way? And whom might one expect to meet? Both kings and pilgrims, to be sure. In *Travel Guide to Europe 1492*, the noted Italian historian Lorenzo Camusso offers modern-day readers and would-be adventurers ten itineraries for trips commonly taken in both the near and far reaches of fifteenth-century Europe. Whether Camusso's wayfarer is an ambitious young banker on the road From Florence to Bruges; the great painter Albrecht Durer on his way from Nurember to Venice, a shipbuilder whose highly prized craft takes him from Seville to Antwerp via Barcelona, Beaune, and Paris; or a lonely pilgrim wandering from Vezelay to far-off Santiago de Compostela, he offers a vivid account of what such a journey would be like--the sights, sounds, perils, and pleasures--and in so doing he renders the very fabric of day-to-day life during this momentous year in Europe's history.

A Guide to the Present Moment Noah Elkrief 2012 Do you want to stop feeling stress, anxiety, shame, unworthiness, depression, anger, guilt, sadness, worry, or fear? It certainly seems as though these emotions are inevitable, and directly created by our circumstances, our situations, and the people in our lives. However, it is possible to discover that all your unwanted emotions are actually created by thoughts in your mind - and each of these emotions can vanish in an instant if you just stop believing these thoughts to be true. This Book Will Help You To: - Experience peace in situations that used to be filled with anxiety and stress - Live with a sense of a wholeness, worthiness, or completeness - Enjoy more love and stronger connections in your relationships with others - Experience the freedom to act how you feel without worrying about others' opinions - Live in the moment or live the power of now (i.e. spiritual awakening) - Experience the fulfillment you have been searching for.

The Fundamentals of Electrical Engineering Felix Hüning 2014-06-23 The technical systems we develop today are complicated. The challenges vehicle manufacturers are facing involve a combination of the fields of electronics, mechanics, control engineering, telecommunications, computer engineering, and software programming in order to realise the required functionality. This multi-disciplinary field of engineering is called mechatronics, and one of the key disciplines in this field is electronic engineering. Consequently, knowledge of the basic laws and principles of electronic engineering is mandatory for anyone who wants to work in the field of mechatronics. This book therefore explains the fundamentals of electrical engineering with an emphasis on mechatronic systems. Starting with basic laws, the main focus is on circuit analysis, including DC and AC circuits, transient effects, filters and oscillating circuits. Basic circuit elements are introduced as well as more complex semiconductor devices like operational amplifiers, bipolar junction transistors and MOSFET field-effect transistors. Finally, a short introduction to the important field of circuit simulation completes the book. The latest vehicles are classic examples of mechatronic systems. Automotive applications are therefore used throughout the book as examples to demonstrate the application of the discussed topics in a mechatronic environment.

assessment for multidisciplinary work Clear instructions on how to construct a coherent institution-wide assessment system and explain it to accreditors Ideas for assigning responsibility for general education assessment Strategies for gathering information about departmental assessment while keeping the departmental workload manageable Information on how to manage assessment in times of budgetary cutbacks Praise for the Second Edition of Assessment Clear and Simple "Walvoord's approach to assessment is wonderfully straightforward; it is also effective in facilitating faculty engagement in assessment. We've applied a number of her methods to our campus assessment efforts with success. This book makes assessment both manageable and useful in improving and enhancing student learning."—Martha L. A. Stassen, director of assessment, University of Massachusetts, Amherst, and president, New England Educational Assessment Network (NEEAN) "Walvoord's work clearly presents the basics for getting started in assessment of student learning while honestly addressing the complexities of assessment when driven by faculty passion for student learning. This book is a valuable resource for the novice as well as the developing experts who are leading their institutions in academic assessment."—Bobbi Allen, faculty assessment director, Delta College

Mister Owita's Guide to Gardening Carol Wall 2014-03-03 From the publisher of The Help comes a moving true story of a unique friendship between two people who had nothing-and ultimately everything-in common. Carol Wall was at a crossroads. Her children had flown the nest, her beloved parents were ageing and becoming increasingly reliant on her and she had overcome a serious illness. Her neglected garden was the least of her worries. Until one day she notices an African man working in her neighbour's garden and realises he is responsible for its spectacular transformation. His name is Giles Owita. He comes from Kenya. And he's very good at gardening. Before long Mr Owita is transforming not only Carol's neglected garden, but her life. Although they appear to have nothing in common, a powerful bond grows between them. But both hold long-buried secrets that will change their friendship forever. This is the story of a woman who at mid-life finds there is so much more to learn and a man whose grace in facing life's challenges is a lesson for us all. 'Deeply personal, poetic, and brimming with humanity, this is a book of lasting grace.' Steve Lopez, New York Times-bestselling author of The Soloist

The Significance Test Controversy Denton E. Morrison 1970-01 Tests of significance have been a key tool in the research kit of behavioral scientists for nearly fifty years, but their widespread and uncritical use has recently led to a rising volume of controversy about their usefulness. This book gathers the central papers in this continuing debate, brings the issues into clear focus, points out practical problems and philosophical pitfalls involved in using the tests, and provides a benchmark from which further analysis can proceed. The papers deal with some of the basic philosophy of science, mathematical and statistical assumptions connected with significance tests and the problems of the interpretation of test results, but the work is essentially non-technical in its emphasis. The collection succeeds in raising a variety of questions about the value of the tests; taken together, the questions present a strong case for vital reform in test use, if not for their total abandonment in research. The book is designed for practicing researchers-those not extensively trained in mathematics and statistics that must nevertheless regularly decide if and how tests of significance are to be used-and for those training for research. While controversy has been centered in sociology and psychology, and the book will be especially useful to researchers and students in those fields, its importance is great across the spectrum of the scientific disciplines in which statistical procedures are

essential-notably political science, economics, and the other social sciences, education, and many biological fields as well. Denton E. Morrison is professor, Department of Sociology, Michigan State University. Ramon E. Henkel is associate professor emeritus, Department of Sociology University of Maryland. He teaches as part of the graduate faculty.
