Ten Minutes for the Family Eia Asen 2004-08-02 The provision of suitable mental health care is one of the major tasks facing general practitioners and their teams. Family-oriented primary care has moved from doctor-controlled to patient-centred consultations, with a greater emphasis on collaboration. The systemic framework uniquely lends itself to this shift in emphasis, as it views the delivery of care in social rather than merely medical terms. There is now a strong evidence base for the efficacy of systemic approaches in managing many different types of mental health and relationship issues. This text is a practical guide for health professionals working in primary care who wish to improve their management of problem patients, problem families and problem situations. Step-by-step, it introduces both the theory and the practice of the family approach - from interviewing individual patients in routine consultations to conducting specific family crisis meetings. It includes many concrete suggestions for using simple family therapy techniques and encourages the clinician to think about cases constructively. Case histories and patient stories are used extensively to illustrate the techniques as well as boxed information to highlight key points.

Taking Science to School National Research Council 2007-04-16 What is science for a child? How do children learn about science and how to do science? Drawing on a vast array of work from neuroscience to classroom observation, Taking Science to School provides a comprehensive picture of what we know about teaching and learning science from kindergarten through eighth grade. By looking at a broad range of questions, this book provides a basic foundation for guiding science teaching and supporting students in their learning. Taking Science to School answers such questions as: When do children begin to learn about science? Are there critical stages in a child's development of such scientific concepts as mass or animate objects? What role does nonschool learning play in children's knowledge of science? How can science education capitalize on children's natural curiosity? What are the best tasks for books, lectures, and hands-on learning? How can teachers be taught to teach science? The book also provides a detailed examination of how we know what we know about children's learning of science--about the role of research and evidence. This book will be an essential resource for everyone involved in K-8 science education--teachers, principals, boards of education, teacher education providers and accreditors, education researchers, federal education agencies, and state and federal policy makers. It will also be a useful guide for parents and others interested in how children learn.

Moving People and Knowledge Louise Ackers 2009-01-01 The book can be seen as a welcomed contribution to this field of study. . . [it] raises some important questions and problems of scientific mobility. Høgni Kalsø Hansen, Papers in Regional Science This is a very timely book looking at East West migration, which has recently become a hot political issue in various West European countries. It does an excellent job in laying out the intricacies of mobility that affect different groups, particularly knowledge migrants. The book successfully shows that knowledge migrants follow different motivational routes than other groups of migrants in their choice of mobility between institutes and nations. It makes a valuable contribution to a growing body of research that seeks to change established thinking and rhetoric about migration and to shift it from a dualistic thinking of migration in terms of economic vs. non-economic migrants. What this book shows is that the professional identity of people often supersedes their nationalities in relation to why and where they move. Sami Mahroum, NESTA, UK Based on excellent empirical research on migrating scientists from Poland and Bulgaria to the UK and Germany, this book follows an innovative agenda which is crucial to the world today the movement of people and the movement of knowledge. It achieves this by a creative blend of analysing personal stories, embedded in their professional and family networks, on the one hand, and macro-scale discussions of brain drain, brain gain and national and European policy implications on the other. Russell King, University of Sussex, UK This book makes a timely contribution to understanding the circulation of scientific knowledge via international mobility. It skillfully combines an analysis of structural and institutional changes, with a focus on individual circumstances, life courses and motivations. The outcome is a compelling account of the role of international migration in the transfer of knowledge across borders, and in shaping the careers of individual scientists. This places people and human mobility at the heart of the debate about how the knowledge economy is produced and reproduced. Allan Williams, London Metropolitan University, UK Moving People and Knowledge provides a fresh examination of the processes of highly skilled science migration. Focusing on intra-European mobility and, in particular, on the new dynamics of East West migration, the authors investigate the movement of Polish and Bulgarian researchers to and from the UK and Germany. Key questions include: who is moving, how long for, and why? In addressing the motivations and experiences of mobile scientists and their families, insights into professional and personal motivations are provided, demonstrating how relationships, networks and infrastructures shape decision-making. This book provides a useful perspective on the implications of increasing researcher mobility for both sending and receiving regions and the individuals concerned which is necessary for the construction of future policies on sustainable scientific development. This empirical account provides a nuanced analysis of the duration and flow of scientific mobility showing the prevalence of repeat and

shuttle moves in science careers. It will be of particular interest to researchers in European social policy, migration studies and EU law, as well as policymakers in the field of highly skilled migration especially those working on the free movement of persons provisions and the European Research Area and European Area of Higher Education.

Preview questions and follow-up activities assist the reader in applying the material discussed in each chapter.

The Tale of the Unknown Island José Saramago 2011-11-30 "A man went to knock at the king's door and said, Give me a boat. The king's house had many other doors, but this was the door for favours (favours being offered to the king, you understand), whenever he heard someone knocking on the door for petitions, he would pretend not to hear..." Why the petitioner required a boat, where he was bound for, and who volunteered to crew for him and what cargo it was found to be carrying the reader will discover as this short narrative unfolds. And at the end it will be clear that what might appear to be a children's fable is in fact a wry, witty Philosophical Tale that would not have displeased Voltaire or Swift.

High Diversity Forest Restoration in Degraded Areas Ricardo Ribeiro Rodrigues 2007 The discussion of ideas, methods, scientific results, empirical practices and perspectives on the restoration of high diversity tropical and subtropical forest formations is the objective of this book; however, principles here proposed may be used in other less complex forest formations. Special attention is given to the role of the ecological processes on the restoration of functional forest communities, once the composition and structure of these natural or even restored communities change in space and time.

Good Morning Comrades Ondjaki 2008-03-15 Luanda, Angola, 1990. Ndalú is a normal twelve-year old boy in an extraordinary time and place. Like his friends, he enjoys laughing at his teachers, avoiding homework and telling tall tales. But Ndalú's teachers are Cuban, his homework assignments include writing essays on the role of the workers and peasants, and the tall tales he and his friends tell are about a criminal gang called Empty Crate which specializes in attacking schools. Ndalú is mystified by the family servant, Comrade Antonio, who thinks that Angola worked better when it was a colony of Portugal, and by his Aunt Dada, who lives in Portugal and doesn't know what a ration card is. In a charming voice that is completely original, *Good Morning Comrades* tells the story of a group of friends who create a perfect childhood in a revolutionary socialist country fighting a bitter war. But the world is changing around these children, and like all childhood's Ndalú's cannot last. An internationally acclaimed novel, already published in half a dozen countries, *Good Morning Comrades* is an unforgettable work of fiction by one of Africa's most exciting young writers.

The Nature of Space Milton Santos 2021-08-06 In *The Nature of Space*, pioneering Afro-Brazilian geographer Milton Santos attends to globalization writ large and how local and global orders intersect in the construction of space. Santos offers a theory of human space based on relationships between time and ontology. He argues that when geographers consider the inseparability of time and space, they can then transcend fragmented realities and partial truths without trying to theorize their way around them. Based on these premises, Santos examines the role of space, which he defines as indissoluble systems of objects and systems of actions in social processes, while providing a geographic contribution to the production of a critical social theory.

Barren Lives Graciliano Ramos 2011-05-18 A peasant family, driven by the drought, walks to exhaustion through an arid land. As they shelter at a deserted ranch, the drought is broken and they linger, tending cattle for the absentee ranch owner, until the onset of another drought forces them to move on, homeless wanderers again. Yet, like the desert plants that defeat all rigors of wind and weather, the family maintains its will to survive in the harsh and solitary land. Intimately acquainted with the region of which he writes and keenly appreciative of the character of its inhabitants, into whose minds he has penetrated as few before him, Graciliano Ramos depicts them in a style whose austerity well becomes the spareness of the subject, creating a gallery of figures that rank as classic in contemporary Brazilian literature.
