A Corpus Study of Collocation in Chinese Learner English Yuanwen Lu 2016-12-08 Collocation is an important tool in describing lexical behaviour in language and has received increasing attention in recent years. Based on two corpora: LOCNESS (the Louvain Corpus of Native English Essays) and MLC (the Non-English major Mainland Chinese Learner Corpus), this book explores the features of Chinese learner English with analysis of grammatical and lexical collocations. The findings show that Chinese university students use collocations with considerably less variety and Chinese language and culture exert a substantial influence on their English writing. It also discusses ways to tackle the problems Chinese English learners face and the pedagogical implications for teaching English and learning English collocations. As one of the first systematic studies to investigate collocations in Chinese learner English based on learner corpora, this book not only analyzes how Chinese learners use collocations in their English writing, but also provides significant implications for foreign language teaching and learning.

How much does it cost to oppose? José Manuel Ferro Veiga 2021-01-26 Illusion is associated with the will to live that encourages carrying out projects, and also with joy, with hope for something, someone or positive, favorable and optimistic expectations. The illusion implies believing in dreams and feeling capable of raising them and carrying out behaviors to pursue them, being persistent to achieve them, having hope in achieving them against the adversities that may appear along the way and doing it with desire and joy. In the same way, it is closely linked to the emotions, thoughts and attitudes and to the action of each one. Taking a competitive examination involves a sustained effort of between nine months and three years in which the cost can range from a few euros to several thousand, depending on the applicant's aptitudes, the position he wants to access and the study method he chooses. In this book he incorporated information to help the future official to try to get a permanent or working position in any public administration of the State, local or Institutional. You will find data on study techniques, methods to overcome stress, configuration of the study space, meditation and concentration techniques as well as much more information necessary for the student. Luck!

Social skills for educational staff Sardón Gall 2021-07-02 The changes that are taking place in today's society are giving rise to the emergence of problems that affect the teaching work, affecting their health: the indiscipline of the students, the delegation of educational responsibilities of the family to the teacher, the change values and social relations, the low value of teachers, the diversity of students, the transfer of responsibilities to teachers due to lack of specialized personnel etc. Teachers, police officers and health professionals are the main risk groups for burnout syndrome, a condition of the work environment that generates exhaustion, demotivation and anguish. Progressive exhaustion, lack of motivation for work and

sudden changes in mood with feelings of sadness, grief, anguish, mental discomfort accompanied by melancholy, pessimism and insubstantiality. People, as social beings, are forced to establish relationships with their peers, whether in the family, educational, work or leisure environment. However, it is not always easy to function in a certain social or professional context . And it is not due to a lack of skills, but because the necessary skills to do so have not been acquired. Within the field of health, teaching to develop these skills has been shown to be the most effective way to establish healthy behaviors, both individually and collectively . The book incorporates information on the following topics: - The resilience - Relationships with a partner at work - Dominio of emotions - To confront conflicts - The art of conversation - Body language - Like others - Oversize problems - Embittering life is easy - Burning jobs - Friendship - Public speaking - Persuasion techniques - The psychologist, a specialist who can help us - A utocontro I - Make and receive criticism - The envy - Jealousy - be weak - The happiness - Reflection - Workplace harassment - Image advisor - Dyslexia -Etc..

Essential PySpark for Scalable Data Analytics Sreeram Nudurupati 2021-10-29 Get started with distributed computing using PySpark, a single unified framework to solve end-to-end data analytics at scale
Key Features Discover how to convert huge amounts of raw data into meaningful and actionable insights Use Spark's unified analytics engine for end-to-end analytics, from data preparation to predictive analytics Perform data ingestion, cleansing, and integration for ML, data analytics, and data visualization
Book Description Apache Spark is a unified data analytics engine designed to process huge volumes of data quickly and efficiently. PySpark is Apache Spark's Python language API, which offers Python developers an easy-to-use scalable data analytics framework. Essential PySpark for Scalable Data Analytics starts by exploring the distributed computing paradigm and provides a high-level overview of Apache Spark. You'll begin your analytics journey with the data engineering process, learning how to perform data ingestion, cleansing, and integration at scale. This book helps you build real-time analytics pipelines that help you gain insights faster. You'll then discover methods for building cloud-based data lakes, and explore Delta Lake, which brings reliability to data lakes. The book also covers Data Lakehouse, an emerging paradigm, which combines the structure and performance of a data warehouse with the scalability of cloud-based data lakes. Later, you'll perform scalable data science and machine learning tasks using PySpark, such as data preparation, feature engineering, and model training and productionization. Finally, you'll learn ways

to scale out standard Python ML libraries along with a new pandas API on top of PySpark called Koalas. By the end of this PySpark book, you'll be able to harness the power of PySpark to solve business problems. What you will learn Understand the role of distributed computing in the world of big data Gain an appreciation for Apache Spark as the de facto go-to for big data processing Scale out your data analytics process using Apache Spark Build data pipelines using data lakes, and perform data visualization with PySpark and Spark SQL Leverage the cloud to build truly scalable and real-time data analytics applications Explore the applications of data science and scalable machine learning with PySpark Integrate your clean and curated data with BI and SQL analysis tools Who this book is for This book is for practicing data engineers, data scientists, data analysts, and data enthusiasts who are already using data analytics to explore distributed and scalable data analytics. Basic to intermediate knowledge of the disciplines of data engineering, data science, and SQL analytics is expected. General proficiency in using any programming language, especially Python, and working knowledge of performing data analytics using frameworks such as pandas and SQL will help you to get the most out of this book.

Psychology of Intelligence Analysis Richards J Heuer 2020-03-05 In this seminal work, published by the C.I.A. itself, produced by Intelligence veteran Richards Heuer discusses three pivotal points. First, human minds are ill-equipped ("poorly wired") to cope effectively with both inherent and induced uncertainty. Second, increased knowledge of our inherent biases tends to be of little assistance to the analyst. And lastly, tools and techniques that apply higher levels of critical thinking can substantially improve analysis on complex problems.

Social Skills for Public Employees (Officials) Sardón Gall 2021-07-03 Six out of ten young Spaniards want to enter the Public Administration. Stability, fixed hours and extra payments are the 'hooks' that justify that choice. Job security, the guarantee of a decent salary and office hours rank high on the list of life aspirations for millions of people. For them, these conditions are associated with an end, quality of life, and a means, working in the Public Administration. The statistics indicate this: six out of ten young people up to 30 years of age prefer - with the same salary and stability - to work in the public sector rather than in a private company. But not everything is a "paradise", also this type of employment has its

disadvantages. It will be complex to envision the future occupations of human public employees since the process of substitution by robots will have very profound impacts, the competencies of the future are related to the most basic human skills: knowing how to read, write, count and speak. Whoever masters these skills (much more complex than they appear) will never lose their job, either in the Public Administration or outside of it. Teachers, police officers and health professionals are the main risk groups for burnout syndrome, a condition in the work environment that generates exhaustion, demotivation and anguish. Progressive exhaustion, lack of motivation for work and sudden changes in mood with feelings of sadness, grief, anguish, mental discomfort accompanied by melancholy, pessimism and insubstantiality.
