Sixguns Elmer Keith 1961 “Over half a century has passed since I cut my teeth on an old .36 Navy Colt. For 40 years I have almost never been out of easy reach of a good sixgun. Thirty years I spent in the saddle, packing, punching cows and breaking saddle brones. The sixgun was worn just as regularly as my pants and many times was much more important to my existence. It pulled me out of several tight scrapes with wild horses, wilder cattle and some big game. Though I have witnessed several gun fights, have had guns pulled on me and have been shot at several times, I have never had to use my gun on a man. Several times it was touch-and-go and perhaps only the current knowledge that I was both fast and accurate with a sixgun saved me from being embroiled. Though I do not recommend a sixgun for big game, thirty head of big game have fallen to mine, including elk, bear, deer, cougar, mountain goat and javelina. I have also trailed up a great many big game animals of various species that were wounded by sportsmen and then I finished them off. No record was kept of these or the many coyotes, bobcats and lesser game, or the livestock I have had to kill.” This classic includes the following chapters: Introduction

I. History of the Sixgun II. Selecting the Handgun III. Learning To Shoot IV. Sixgun Sights V. Long Range Shooting VI. Game Shooting VII. Double Action Shooting VIII. Gun Rigs and Holsters IX. Quick Draw and Hip Shooting X. Gun Fighting XI. Revolver Versus Auto Pistol XII. Aerial and Trick Shooting XIII. Slip Shooting, Fanning, Cavalry Guns XIV. The Browning Automatic Rifle Robert R. Hodges Jr. 2012-04-20 For nearly fifty years the hard-hitting, mobile Browning Automatic Rifle, or BAR, served in US infantry units as a light squad automatic “base of fire” weapon, providing quick bursts of concentrated fire. Designed in World War One, it didn't reach the front until September 1918. In the interwar years US forces used the BAR across the world, from China to Nicaragua. It also became a favorite of notorious gangsters like Clyde Barrow and Bonnie Parker, who prized its ability to punch through police armored cars. At the outset of World War II the US armed forces decided to adapt the BAR for a light machine gun role. The BAR was not without its flaws; it was heavy and difficult to dismantle and reassemble, and it didn't cope well with sustained fire. Nevertheless, the BAR saw action in every major theater of World War II and went on to be used in Korea and in the opening stages of the Vietnam War. Featuring arresting first-hand accounts, specially drawn full-color artwork and close-up photographs, many in color, this lively study offers a vivid portrait of this powerful, long-lived and innovative weapon that saw service with US and other forces across the world for much of the 20th century.

It was widely used from the First World War all the way up to the Vietnam War. Modern M1911 variants are still in use by some units within the U.S. Army Special Forces, the U.S. Navy and U.S. Marine Corps. The Automatic Pistol, Caliber .45, M1911 was designed by John Browning, and is the best known of his designs to use the short recoil principle in its basic design. The design was widely copied, and this operating system rose to become the most renowned type of the twentieth century. In total, the United States purchased around 2.7 million M1911 and M1911A1 pistols in military contracts during its service life. Created in 1940, this field manual reveals a great deal about the M1911's design and capabilities. Intended as a manual for those charged with operation, it details many strategies for achieving outstanding marksmanship. Browning Automatic Rifle, Caliber .30, M1918 Without Bipod: FM 23-20 War Department 2013-10 The Browning Automatic Rifle (known as the "BAR") M1918 was designed in 1917 by John Browning for the U.S. Expeditionary Corps in Europe. The M1918 is a selective fire, air-cooled automatic rifle chambered for the .30-06 Springfield rifle cartridge. It uses a gas-operated long-stroke piston rod actuated by propellant gases bled through a vent in the barrel. The bolt is locked by a rising bolt lock and the gun fires from an open bolt. The spring-powered cartridge casing extractor is contained in the bolt and a fixed ejector is installed in the trigger group. As a heavy automatic rifle designed for support fire, the M1918 was not fitted with a bayonet mount and no bayonet was ever issued. Although the weapon did see some action in World War I, the BAR did not become standard issue in the U.S. Army until 1938 when it was issued to squads as a portable light machine gun. The Browning saw extensive service in both World War II and the Korean War and saw some service early in the Vietnam War. The U.S. Army began phasing out the M1918 in the late 1950s and was without a portable light machine gun until the introduction of the M249 Squad Automatic Weapon in the mid-1980s. Created in 1940, this field manual reveals a great deal about the M1918's design and capabilities. Intended as a field manual for operation and maintenance, it details gun assembly, accessories and much more. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.
