**Lean Hospitals** Mark Graban 2018-10-08 Organizations around the world are using Lean to redesign care and improve processes in a way that achieves and sustains meaningful results for patients, staff, physicians, and health systems. *Lean Hospitals, Third Edition* explains how to use the Lean methodology and mindsets to improve safety, quality, access, and morale while reducing costs, increasing

capacity, and strengthening the long-term bottom line. This updated edition of a Shingo Research Award recipient begins with an overview of Lean methods. It explains how Lean practices can help reduce various frustrations for caregivers, prevent delays and harm for patients, and improve the long-term health of your organization. The second edition of this book presented new material on identifying waste, A3 problem solving, engaging employees in continuous improvement, and strategy deployment. This third edition adds new sections on structured Lean problem solving methods (including Toyota Kata), Lean Design, and other topics. Additional examples, case studies, and explanations are also included throughout the book. Mark Graban is also the co-author, with Joe Swartz, of the book Healthcare Kaizen: Engaging Frontline Staff in Sustainable Continuous Improvements, which is also a Shingo Research Award recipient. Mark and Joe also wrote The Executive's Guide to Healthcare Kaizen.

**Building and Sustaining a Hospital-Based Nursing Research Program** Dr. Albert Albert, PhD, CCNS, CCRN, NE-BC, FAHA, FCCM 2015-11-13 The first resource to present the "nuts and bolts" of creating a successful nursing research program. This text provides a roadmap to develop and nurture a nursing research program in complex hospital environments. Written by experienced clinical researchers who have successfully implemented these techniques in the Cleveland Clinic, the handbook shows nurses how to build and sustain a research program—a fundamental requirement to transform patient care and administrative practices and obtain and sustain American Nurses Credentialing Center Magnet® program recognition. The book demonstrates, step-by-step, how leaders and staff can integrate nursing research into the workflow of complex health care environments. It provides a framework for developing horizontal and vertical structures that promote the creation of new knowledge and for enhancing the scientific foundation of nursing evidence. With a focus on practical applications, the book addresses the structures, systems, processes, and resources required for creating and maintaining a research program along with methods for its evaluation. The handbook describes foundational principles that apply to hospitals of all sizes (including ambulatory centers and hospitals without extensive resources), and provides concrete guidance in adapting structures and processes to fit the needs of hospitals with varied nursing staff size and program goals. Replete with a wealth of ideas and strategies, it provides detailed templates that will assist novice and more experienced researchers, guidelines for committees to support nursing research within a hospital, and discusses the "who," "what," "why" of systems that enhance workflow. Chapters offer experiential stories written by nurses who describe the "real world" experiences of implementing clinical research in their practice. Tables and figures further illuminate information. Key Features: Written by experienced researchers who have implemented the techniques used in this book Provides a framework adaptable for use with hospitals of all sizes Includes guidelines for committees/councils to support nursing research within the organization Discusses processes and systems that enhance collaboration and workflow Offers stories from the field by nurses about "lessons learned" from their research experiences

**Public Policy and the Black Hospital** Mitchell F. Rice 1994 This study adds to the small but growing literature on Black health history--the rise of hospital care and hospital services provided to Blacks from the antebellum era to the integration era, a period of some 150 years. The work examines the political, policy, legal, and philanthropic forces that helped to define the rise, development, and decline of Black hospitals in the United States. Particular discussion is given to the federal Hill-Burton Act of 1946 and the extent to which the legislation impacted Black hospital development. The roles of the Freedman's Bureau, National Medical Association, National Hospital Association, and the U.S. Commission on Civil Rights in the development of Black hospitals is highlighted.

**Cracking the Glass Ceiling** Carole K. Adair 1999 Barriers which hinder career advancement of women are complex and varied. They have become top agenda items for most corporations and the government. The "glass ceiling" is a term that symbolizes a variety of barriers that prevent qualified individuals from advancing higher in their organization. Although many women hold management positions, few have made the breakthrough to top-level positions. To determine what conditions are required for women to attain top executive positions, an ethnographic study was conducted at a hospital. The study was limited to four women who held executive positions: one associate administrator, one interim associate administrator, one director and the CEO. An in-depth data gathering technique using observation, interviews and documentation was used to investigate factors such as education/skills, influences, support, barriers and corporate culture. The findings revealed: (a) having opportunities to be participating, valued family members and to compete in activities while young helps girls to develop a sense of competence and mastery; (b) education, credential building experiences, certain competencies and being willing to take risks are necessary for success; (c) having certain attitudes and philosophies are crucial factors in their success; (d) mentors, network involvement and relationships with peers does affect mobility; (e) the women did have a career plan, not in the sense of a linear career plan, but rather one in the form of the spiral career concept; (f) the hospital is a structure which provides opportunities to develop careers; (g) the women understand, accept and have learned to adapt to the culture of the society in which they live and work; (h) the women are savvy at expressing, affirming and communicating the substance of their culture to others; (i) the amount of prejudice a woman encountered depended upon several components; and (j) the barriers to advancement experienced by the women do not confirm those discussed in the review of literature. Further research is recommended on the qualifications of male and female CEOs, educational programs most appropriate for female executives, how successful female executives learned to deal with their barriers and why certain organizations do not have top female executives.
