**Foundations of Data Visualization** Min Chen 2021-08-13 This is the first book that focuses entirely on the fundamental questions in visualization. Unlike other existing books in the field, it contains discussions that go far beyond individual visual representations and individual visualization algorithms. It offers a collection of investigative discourses that probe these questions from different perspectives, including concepts that help frame these questions and their potential answers, mathematical methods that underpin the scientific reasoning of these questions, empirical methods that facilitate the validation and falsification of potential answers, and case studies that stimulate hypotheses about potential answers while providing practical evidence for such hypotheses. Readers are not instructed to follow a specific theory, but their attention is brought to a broad range of schools of thoughts and different ways of investigating fundamental questions. As such, the book represents the by now most significant collective effort for gathering a large collection of discourses on the foundation of data visualization. Data visualization is a relatively young scientific discipline. Over the last three decades, a large collection of computer-supported visualization techniques have been developed, and the merits and benefits of using these techniques have been evidenced by numerous applications in practice. These technical advancements have given rise to the scientific curiosity about some fundamental questions such as why and how visualization works, when it is useful or effective and when it is not, what are the primary factors affecting its usefulness and effectiveness, and so on. This book signifies timely and exciting opportunities to answer such fundamental questions by building on the wealth of knowledge and experience accumulated in developing and deploying visualization technology in practice.

*Cognitive Automation and Organizational Psychology* Alexander D. Stajkovic 2019-06-10 Jobs that were once well-defined are now multifaceted. New realities have placed a premium on employee cognitive processing to fulfill complex occupational roles. But human conscious cognitive capacity is limited, making it nearly impossible for employees to keep up without being overloaded. Stajković and Sergent refute the common assumption that technological automation is the only way forward. Instead, they directly tackle the issue of employee cognitive overload by proposing cognitive automation as an alternative solution. The authors present a sampling of cutting-edge research showing that conscious guidance is not required for all goal pursuits; goal-directed behavior at work can be automated via priming of subconscious goals. Building on research in social psychology and organizational behavior, Stajković and Sergent introduce four models to explain how subconscious goals are primed in organizations:

- Auto-motive model: Repeated practice with a goal makes cognitive automation possible.
- Goal contagion: Observing and inferring goals of others creates cognitive automation.
- Means-goal priming: Confidence in your goal pursuit enhances cognitive automation.
- A history of reinforcement: Money, feedback, and social recognition used to reinforce goal achievement become associated with the goal, resulting in cognitive automation.

The authors canvas a broad range of knowledge concerning the problem of employee cognitive overload in contemporary organizations and rely on multidisciplinary research to propose cognitive automation as a solution that can address it directly. This book is a deep well of valuable information for those interested in solving real work problems with application of science of organizational behavior (SOB).

The Thread of Energy Martin J. Pasqualetti 2021-10-19 Energy weaves the tapestry of our lives, and it does so in more ways than we usually recognize. While it is clear that it powers our homes, airplanes, and factories, its overwhelming influence often goes without notice in other areas, from the heartbreak of poverty to the motivation for war. While maintaining its availability has the potential to create jobs and contribute to competitive economies, nonrenewable energy sources are scarring our landscapes, polluting our air, and fouling our water. Understanding how we use energy and what we are willing to do to maintain our access to it can help us prepare for the complex and daunting challenges that linger as we look for alternatives. In The Thread of Energy, Martin J. Pasqualetti homes in on this vital driver of human actions and decisions. He exposes the impact of energy according to multiple scales of measurement and assessment, from everyday applications to global entanglements. The book traces our increasing dependence on Earth's nonrenewable energy resources by comparing lifestyle changes throughout history. Pasqualetti showcases the many ways energy infiltrates communication methods in all its forms (e.g., print, visuals, digital, etc.). The final chapters detail various approaches used by democratic societies looking to lessen their energy usage, including the critical importance of environmentally conscious policymakers. The Thread of Energy treats energy as a social issue with a technical component, rather than the other way around.

Major concepts of the Common Core State Standards are included. For example, deep conceptual understanding, the importance of student intellectual engagement, and the precise use of language have always been at the foundation of the Framework for Teaching, but are more clearly articulated in this edition. The language has been tightened to increase ease of use and accuracy in assessment. Managing Technological Innovation: Tools And Methods Daim Tugrul U 2017-03-09 The management of technological innovation is both an art, as well as a science; the process involves the know-how and technological core skills to deliver the functionality on the one hand, and (with an ear on the ground) the ability to identify changes in technologies to come up with new innovations on the other. This requires, as a result, frameworks, system tools, and methodologies to improve the yield in innovations. Managing Technological Innovation provides a set of tools and case studies for R&D managers to effectively manage technological innovations — from the identifying of technological needs to the launch of the product. The book is divided into five parts. Part 1 addresses the policies and strategies necessary to provide direction to R&D organizations in the management of technological innovation. Part 2 focuses on technological assessment; presenting the methods available to better matching of technologies to strategic directions, supported with case studies to illustrate the evaluation methods. Part 3 covers the development and building of technological portfolios with new products, as well as mitigation strategies. Part 4 focus on the execution phase of built portfolios — the development of new products. And finally, Part 5 rounds up with a study on the factors which impact the diffusion of technological innovations into the market place. This book is a practical guide for R&D professions and designers, as well as a case study reference for graduate students in pursuit of their project work.

Five Dimensions of Quality Linda Suskie 2014-10-13 Meet calls for increased quality and understand accreditation expectations Author Linda Suskie is internationally recognized for her work in higher education assessment, and she is a former vice president of a major regional accreditor. In *Five Dimensions of Quality: A Common Sense Guide to Accreditation and Accountability in Higher Education* she provides a simple, straightforward model for understanding and meeting the calls for increased quality in higher education ever-present in today's culture. Whether your institution is seeking accreditation or not, the five dimensions she outlines will help you to identify ways to improve institutional quality and demonstrate that quality to constituents. For those wading through the accreditation process, which has become more difficult in recent years due to increasing regulation and pressure for greater accountability, Suskie offers expert guidance on understanding the underlying principles of the expectations of accrediting bodies. Using the model presented here, which is much easier to understand than the sometimes complex resources provided by individual accrediting bodies, American colleges and universities can understand what they need to do to earn and maintain their regional accreditation as well as improve overall institutional quality for their students. You'll be able to: Identify ways to improve institutional quality Demonstrate the quality of your institution to internal and external constituents Avoid wasting time and energy on misguided institutional processes to comply with accreditation requirements By focusing on why colleges and universities should take particular actions rather than only on what those actions should be, *Five Dimensions of Quality* gives them the knowledge and strategies to prepare for a successful review. It is an ideal resource for leaders, accreditation committee members, and everyone on campus.
