Injury Epidemiology: Fourth edition Leon S. Robertson, Ph.D. 2015 Research on injuries is a high priority to inform public policy that reduces deaths, hospitalizations and associated costs. Principles for research design and analysis of injury incidence and severity are emphasized. Review of extant surveillance data reveals numerous flaws that must be changed to increase usefulness of the data. Research designs of studies of injury causation and evaluation of countermeasures are often inappropriate and mislead analytic and injury control efforts. Appendices to chapters illustrate research projects that influenced public policy affecting the reduction of motor vehicle fatalities per population by half in the U.S. The principles illustrated by these studies can be applied to other types of injury.

Black Performance Theory Thomas F. DeFrantz 2014-04-14 Black performance theory is a rich interdisciplinary area of study and critical method. This collection of new essays by some of its pioneering thinkers—many of whom are performers—demonstrates the breadth, depth, innovation, and critical value of black performance theory. Considering how blackness is imagined in and through performance, the contributors address topics including flight as a persistent theme in African American aesthetics, the circulation of minstrel tropes in Liverpool and in Afro-Mexican settlements in Oaxaca, and the reach of hip-hop politics as people around the world embrace the music and dance. They examine the work of contemporary choreographers Ronald K. Brown and Reggie Wilson, the ways that African American playwrights translated the theatricality of lynching to the stage, the ecstatic music of Little Richard, and Michael Jackson's performance in the documentary This Is It. The collection includes several essays that exemplify the performative capacity of writing, as well as discussion of a project that re-creates seminal hip-hop album covers through tableaux vivants. Whether deliberating on the tragic mulatta, the trickster figure Anansi, or the sonic futurism of Nina Simone and Adrienne Kennedy, the essays in this collection signal the vast untapped critical and creative resources of black performance theory. **Underwater** Ryan Dezember 2020-07-14 Winner of the Bruss Real Estate Book Award His assignment was to write about a real-estate frenzy lighting up the Redneck Riviera. So Ryan Dezember settled in and bought a home nearby himself. Then the market crashed, and he became one of the millions of Americans who suddenly owed more on their homes than they

were worth. A flood of foreclosures made it impossible to sell. It didn't help that his quaint neighborhood fell into disrepair and drug-induced despair. He had no choice but to become a reluctant and wildly unprofitable landlord to move on. Meanwhile, his reporting showed how the speculative mania that caused the crash opened the U.S. housing market to a much larger breed of investors. In this deeply personal story, DeZemmer shows how decisions on Wall Street and in Washington played out on his street in a corner of the Sunbelt that was convulsed by the foreclosure crisis. Readers will witness the housing market collapse from DeZemmer's perch as a newspaper reporter. First he's in the boom-to-bust South where a hot-air balloonist named Bob Shallow becomes one of the world's top selling real-estate agents arranging condo flips, developers flop in spectacular fashion and the law catches up with a beach-town mayor on the take. Later he's in New York, among financiers like Blackstone's Stephen Schwarzman who are building rental empires out of foreclosures, staking claim to the bastion of middle-class wealth: the single-family home. Through it all, DeZemmer is an underwater homeowner caught up in the mess. A cautionary tale of Wall Street's push to turn homes into assets, *Underwater* is a powerful, incisive story that chronicles the crash and its aftermath from a fresh perspective—the forgotten, middle-class homeowner.

*Internal Combustion Engines* Institution of Mechanical Engineers 2014-10-10 This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO<sub>2</sub> emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets
