*The Informatics Handbook* S.A. Fist 2012-12-06 This is not a dictionary - and nor is it an encyclopedia. It is a reference and compendium of useful information about the converging worlds of computers, communications, telecommunications and broadcasting. You could refer to it as a guide for the Information Super Highway, but this would be pretentious. It aims to cover most of the more important terms and concepts in the developing discipline of Informatics - which, in my definition, includes the major converging technologies, and the associated social and cultural issues. Unlike a dictionary, this handbook makes no attempt to be 'prescriptive' in its definitions. Many of the words we use today in computing and communications only vaguely reflect their originations. And with such rapid change, older terms are often taken, twisted, inverted, and mangled, to the point where any attempt by me to lay down laws of meaning, would be meaningless. The information here is 'descriptive' - I am concerned with usage only. This book therefore contains keywords and explanations which

have been culled from the current literature - from technical magazines, newspapers, the Internet, forums, etc. This is the living language as it is being used today - not a historical artifact of 1950s computer science.

**Regulating the Security Industry** Mahesh K. Nalla 2020-01-24 It is widely acknowledged that the size of the security industry has increased in virtually every country around the world, often eclipsing conventional police forces in personnel numbers and expenditures. Security providers differ from law enforcement officers in many ways, yet the nature of their crime reduction activities brings them into frequent contact with citizens, drawing to the forefront issues of training, professionalism and accountability. Unlike police officers, whose training and licensing standards are well established, regulations for security providers are often minimalist or entirely absent. This volume brings together research on regulatory regimes and strategies from around the globe, covering both the large private security sector and the expanding area of public sector 'non-police' protective security. It examines the nature and extent of licensing and monitoring, and the minimum standards imposed on the industry by governments across the world. The chapters in this book were originally published in the International Journal of Comparative and Applied Criminal Justice.
