**A Concise History of Afghanistan in 25 Volumes** Hamid Wahed Alikuzai 2013-10

Afghanistan Literature is World's greatest and richest - without Afghan- Literature no European (German, French, Spanish or English) Literature would exist today The Vedas, Zoroastrian, and Buddhist, among the oldest known Literature of Afghanistan, originating from the Great capital of Bactria present day Balkh, and Aria present day Herat, Sanskrit is the reference to the original history of Afghanistan. The Saxon Europeans' influence during the Great Games of the mid nineteenth century affected the Afghan language, religion and Territories' size, which previously had extended from India to North Africa at 2.6 million square kilometers. The Great Games continued at any cost evolving into present-day conflicts of 2013.

**The Celestial Key to the Vedas** B. G. Sidharth 1999-10-01 A leading astronomer proves that India had a thriving civilization capable of sophisticated astronomy long before Greece, Egypt, or any other world culture. • Provides conclusive evidence that the Rig Veda is 12,000 years old. • Establishes actual dates and places for many of the events in the Hindu epics. For more than a century scholars have debated the antiquity of the Vedas and their related literature, the Brahmanas and Puranas. Relying upon a host of assumptions from linguistic theory, anthropology, and archaeology, they have agreed upon 1500 b.c. as the earliest possible date for the Rig Veda, itself the oldest extant example of Indo-European literature. But in this groundbreaking book, astronomer B. G. Sidharth proves conclusively that the earliest portions of the Rig Veda can be dated as far back as 10,000 b.c. By deciphering the astronomical events and alignments contained in mythical and symbolic form in these ancient texts, Sidharth calls into question many if not all of the assumptions governing Indo-European prehistory. He explores such subjects as the astronomical significance of many Hindu deities and myths, the system of lunar asterisms used to mark time, the identity of the Asvins, and the sophisticated calendar of the ancients that harmonized solar and lunar cycles. Sidharth provides incontrovertible evidence that such "advanced" astronomical concepts as precession, heliocentrism, and the eclipse cycle are encoded in these ancient texts, passages of which make perfect sense only if these astronomical keys are known. Based on internal evidence in the Mahabharata and Ramayana, he also becomes the first to establish likely dates--and even places--for the events described in these famous epics. The Celestial Key to the Vedas is sure to astonish anyone concerned with astronomy, India, or the roots of civilization.

**Mobile Communications** Nicola Green 2009-11-01 The mobile phone has achieved a global presence faster than any other form of information and communication technology. A global multi-billion dollar industry, this small, mundane device is now an intrinsic part of our everyday life. This communications medium has had an immense social and cultural impact and continues to evolve. Talking, texting, photographing, videoing, connecting to a network of other media - the cellphone now seems essential. But, beyond the ways in which it has

actively restructured our daily lives, the mobile has changed our sense of ourselves and the way we see the world. The relationship between public and private space, how we view time and space, how we rely on and negotiate social networks - all are increasingly centred on this small piece of technology. Mobile Communications presents a succinct, challenging, and accessible overview of the transformations and challenges presented by this most personal, yet most overlooked technology.

**Multi-dimensional Approaches Towards New Technology** Ashish Bharadwaj 2018-07-23  
This open access edited book captures the complexities and conflicts arising at the interface of intellectual property rights (IPR) and competition law. To do so, it discusses four specific themes: (a) policies governing functioning of standard setting organizations (SSOs), transparency and incentivising future innovation; (b) issue of royalties for standard essential patents (SEPs) and related disputes; (c) due process principles, procedural fairness and best practices in competition law; and (d) coherence of patent policies and consonance with competition law to support innovation in new technologies. Many countries have formulated policies and re-oriented their economies to foster technological innovation as it is seen as a major source of economic growth. At the same time, there have been tensions between patent laws and competition laws, despite the fact that both are intended to enhance consumer welfare. In this regard, licensing of SEPs has been debated extensively, although in most instances, innovators and implementers successfully negotiate licensing of SEPs. However, there have been instances where disagreements on royalty base and royalty rates, terms of licensing, bundling of patents in licenses, pooling of licenses have arisen, and this has resulted in a surge of litigation in various jurisdictions and also drawn the attention of competition/anti-trust regulators. Further, a lingering lack of consensus among scholars, industry experts and regulators regarding solutions and techniques that are apposite in these matters across jurisdictions has added to the confusion. This book looks at the processes adopted by the competition/anti-trust regulators to apply the principles of due process and procedural fairness in investigating abuse of dominance cases against innovators.

*Constant Touch* Jon Agar 2013-02-07 Mobile phones are a ubiquitous technology with a fascinating history. There are now as many mobile phones in the world as there are people. We carry them around with us wherever we go. And while we used to just speak into them, now mobiles are used to do all kinds of tasks, from talking to twittering, from playing a game to paying a bill. Jon Agar takes the mobile to pieces, tracing what makes it work, and puts it together again, showing how it was shaped in different national contexts in the United States, Europe, the Far East and Africa. He tells the story from the early associations with cars and the privileged, through its immense popular success, to the rise of the smartphone. Few scientific revolutions affect us in such a day-to-day way as the development of the mobile phone. Jon Agar's deft history explains exactly how this revolution has come about - and where it may lead in the future.

**The Purple Violet of Oshaantu** Neshani Andreas 2017-03-27 Through the voice of Mee Ali, readers experience the rhythms and rituals of life in rural Namibia in interconnected stories. In Oshaantu, a place where women are the backbone of the home but are expected to submit to patriarchal dominance, Mee Ali is happily married. Her friend, Kauna, however, suffers at the hands of an abusive husband. When he is found dead at home, many of the villagers suspect her of poisoning him. Backtracking from that time, the novel, with its universal appeal, reveals the value of friendships, some of which are based on tradition while others grow out of strength of character, respect, and love.

**Digital Disruption** James McQuivey 2013 The barriers to entry in your market just vanished. Unexpected competitors are swarming in. Are you ready? You always knew digital was going to change things, but you didn't realize how close to home it would hit. In every industry, digital competitors are taking advantage of new platforms, tools, and relationships to undercut competitors, get closer to customers, and disrupt the usual ways of doing business. The only way to compete is to evolve. James McQuivey of Forrester Research has been teaching people how to do this for over a decade. He's gone into the biggest companies, even in traditional industries like insurance and consumer packaged goods, and changed the way they think about innovation. Now he's sharing his approach with you. McQuivey will show you how Dr. Hugh Reinhoff of Ferrokine BioSciences disrupted the pharmaceutical industry, streamlining connections with doctors and regulators to bring molecules to market far faster--and then sold out for \$100 million. How Charles Teague and his team of four people created Lose It!, a weight loss application that millions have adopted, achieving rapid success and undermining titans like Weight Watchers and Jenny Craig in the process. Regardless of your background and industry, you can learn how to be a digital disruptor too. First, adopt the right mindset: Take risks, invest as cheaply as possible, and build on existing platforms to find the fastest path to solving a customer's problem. Second, seek the "adjacent possible"--the space just next to yours where new technology creates opportunity. That's how Benjamin Rubin and Paolo DePetrillo of Zeo created a \$100 sleep monitor that does much of what you'd get from a \$3,000 sleep lab visit. Finally, disrupt yourself. Use these tools to make parts of your business obsolete before your competitors do. That's what Tim FitzRandolph did at Disney, creating a game that shot to the top of the app store charts. With the tools in this book you can assess your readiness, learn the disruptive mindset, and innovate rapidly, starting right within your own business.

Our Only World Wendell Berry 2015-02-01 "Stern but compassionate, author Wendell Berry raises broader issues that environmentalists rarely focus on . . . In one sense Berry is the voice of a rural agrarian tradition that stretches from rural Kentucky back to the origins of human civilization. But his insights are universal because Our Only World is filled with beautiful, compassionate writing and careful, profound thinking."—Associated Press The planet's environmental problems respect no national boundaries. From soil erosion and population

displacement to climate change and failed energy policies, American governing classes are paid by corporations to pretend that debate is the only democratic necessity and that solutions are capable of withstanding endless delay. Late Capitalism goes about its business of finishing off the planet. And we citizens are left with a shell of what was once proudly described as The American Dream. In this collection of eleven essays, Berry confronts head-on the necessity of clear thinking and direct action. Never one to ignore the present challenge, he understands that only clearly stated questions support the understanding their answers require. For more than fifty years we've had no better spokesman and no more eloquent advocate for the planet, for our families, and for the future of our children and ourselves.
