The ICDP-USGS Deep Drilling Project in the Chesapeake Bay Impact Structure

Gregory S. Gohn 2009 "In 2005 and 2006, an international deep drilling project, conceived and organized under the auspices of the International Continental Scientific Drilling Program and the U.S. Geological Survey, continuously cored three boreholes to a total depth of 1.766 km near the center of the Chesapeake Bay impact structure in Northampton County, Virginia. This volume presents the initial results of geologic, petrographic, geochemical, paleontologic, geophysical, hydrologic, and microbiologic analyses of the Eyreville cores, which constitute a step forward in our understanding of the Chesapeake Bay impact structure and marine impact structures in general. The editors have organized this extensive volume into the following sections: geologic columns; borehole geophysical studies; regional geophysical studies; crystalline rocks, impactites, and impact models; sedimentary breccias; post-impact sediments; hydrologic and geothermal studies; and microbiologic studies. The multidisciplinary approach to the study of this impact structure should provide a valuable example for future scientific drilling investigations."--Publisher's description.

Education and Technology Neil Selwyn 2011-03-17 Digital technology lies at the heart of contemporary education provision. This book considers the key issues in the field and addresses some fundamental but often unvoiced questions about the ever-growing use of technologies in education. It focuses on the social as well as the technical aspects of these issues, giving careful thought to the people, practices, processes and structures behind the use of technologies in education. The book considers a range of current debates and controversies. Will technology replace the school or university? Will technology replace the teacher? What do we really know about learning and technology? Does technology make learning fairer? Can technology address the many educational problems and inequalities faced by people around the world? What does the future hold for technology and education? What can be learnt from the history of technology use? Neil Selwyn takes a critical look at some of the major debates concerning digital technologies and education. Study questions and annotated further reading are included to support readers, along with a companion website linking to online sources and resources.
