Shadou, the friendly but forgetful guard, must return Quaru to his mountain prison. But he needs help. And for that, he turns to Elle Redfern, snarky American teenager and keeper of a secret talent .... You got sent here to Earth, carrying the most dangerous thing in the universe, and then you let it dig a tunnel out of its prison, and you're just all like, 'Sorry people, my bad'! On a dystopian landscape of ash and desolation, a small band of shaken survivors led by Shadou and Elle set out on a collision course with the most powerful entity imaginable .... We'll have one shot to break into that firewall and discover His weakness. You are the only being on this planet capable of such a feat. And that's just the beginning of a multi-volume epic of Earth and space, reluctance and redemption, duty and sacrifice ...

**Conversational Repair and Human Understanding** Makoto Hayashi 2013-01-17 Humans are imperfect, and problems of speaking, hearing and understanding are pervasive in ordinary interaction. This book examines the way we 'repair' and correct such problems as they arise in conversation and other forms of human interaction. The first book-length study of this topic, it brings together a team of scholars from the fields of anthropology, communication, linguistics and sociology to explore how speakers address problems in their own talk and that of others, and how the practices of repair are interwoven with non-verbal aspects of communication such as gaze and gesture, across a variety of languages. Specific chapters highlight intersections between repair and epistemics, repair and turn construction, and repair and action formation. Aimed at researchers and students in sociolinguistics, speech communication, conversation analysis and the broader human and social sciences to which they contribute - anthropology, linguistics, psychology and sociology - this book provides a state-of-the-art review of conversational repair, while charting new directions for future study.

The Age of Spectacle Tom Dyckhoff 2017-04-20 'A great storyteller . . . you would be hard pushed to find a more knowledgeable or entertaining [guide]' Icon 'Such an interesting book . . . I cannot recommend it enough.' Lauren Laverne In Dubai, a luxury apartment block is built in the shape of a giant iPod. In China, President Xi Jinping denounces the trend of constructing 'bizarre' new buildings in wacky shapes and colours. In Cincinnati, celebrity architect Zaha Hadid is paid millions to design a single 'iconic' structure - with the hope of single-handedly transforming the region's ailing fortunes. These incidents are all part of the same story: the rise of the age of spectacle. Over the last fifty years, there has been a revolution in how our cities operate. In *The Age of Spectacle*, Tom Dyckhoff tells the story of how architecture became obsessed with the flashy, the monumental and the ostentatious - and how we all have to live with the consequences. Exploring cityscapes from New York to Beijing, and from Bilbao to Portsmouth, Dyckhoff shows that we are not just witnessing a new kind of building: we are living through a fundamental transformation in how our urban spaces work. The corporate explosion of the last few decades has fundamentally shifted the relationship between architects, politicians and cities' inhabitants, fostering innovative new kinds of engineering and design, but also facilitating ill-conceived vanity projects and commercial power-grabs. Timely, passionate and bursting with new ideas, *The Age of Spectacle* is both an examination of how twenty-first century cities work, and a manifesto for a radically new kind of urbanism. Our cities, Dyckhoff shows, can thrive in the age of spectacle - but only if they engage us not just with dazzling structures, but by responding to the needs of the people who inhabit them. 'Engaging . . . The "iconic" building is the most obvious architectural phenomenon of our age yet, somehow, no one has quite done what Tom Dyckhoff does with *The Age of Spectacle*, which is to tell its story clearly and plainly.' Rowan Moore, Observer 'First class. Finally, a book that nails the

iconic movement - Tom Dyckhoff's *The Age of Spectacle* is the book that I wish I had written.' Simon Jenkins 'Unusually accessible [and] well argued.' Evening Standard

*What Does the Honeybee See? And How Do We Know?* Adrian Horridge 2009-10-01 This book is the only account of what the bee, as an example of an insect, actually detects with its eyes. Bees detect some visual features such as edges and colours, but there is no sign that they reconstruct patterns or put together features to form objects. Bees detect motion but have no perception of what it is that moves, and certainly they do not recognize "things" by their shapes. Yet they clearly see well enough to fly and find food with a minute brain. Bee vision is therefore relevant to the construction of simple artificial visual systems, for example for mobile robots. The surprising conclusion is that bee vision is adapted to the recognition of places, not things. In this volume, Adrian Horridge also sets out the curious and contentious history of how bee vision came to be understood, with an account of a century of neglect of old experimental results, errors of interpretation, sharp disagreements, and failures of the scientific method. The design of the experiments and the methods of making inferences from observations are also critically examined, with the conclusion that scientists are often hesitant, imperfect and misleading, ignore the work of others, and fail to consider alternative explanations. The erratic path to understanding makes interesting reading for anyone with an analytical mind who thinks about the methods of science or the engineering of seeing machines.

The Evolution of Designs Philip Steadman 2008-06-03 This book tells the history of the many analogies that have been made between the evolution of organisms and the human production of artefacts, especially buildings. It examines the effects of these analogies on architectural and design theory and considers how recent biological thinking has relevance for design. Architects and designers have looked to biology for inspiration since the early 19th century. They have sought not just to imitate the forms of plants and animals, but to find methods in design analogous to the processes of growth and evolution in nature. This new revised edition of this classic work adds an extended Afterword covering recent developments such as the introduction of computer methods in design in the 1980s and '90s, which have made possible a new kind of 'biomorphic' architecture through 'genetic algorithms' and other programming techniques.

Bach's Dialogue with Modernity John Butt 2010-01-14 Providing a detailed analysis of Bach's Passions, this 2010 book represents an important contribution to the debate about the culture of 'classical music', its origins, priorities and survival. The angles from which each chapter proceeds differ from those of a traditional music guide, by examining the Passions in the light of the mindsets of modernity, and their interplay with earlier models of thought and belief. While the historical details of Bach's composition, performance and theological context remain crucial, the foremost concern of this study is to relate these works to a historical context that may, in some threads at least, still be relevant today. The central claim of the book is that the interplay of traditional imperatives and those of early modernity renders Bach's Passions particularly fascinating as artefacts that both reflect and constitute some of the priorities and conditions of the western world.

Roman Jakobson Richard Bradford 2005-08-10 In Roman Jakobson Richard Bradford reasserts the value of Jakobson's work, arguing that he has a great deal to offer contemporary critical theory and providing a critical appraisal the sweep of Jakobson's career. Bradford re-establishes Jakobson's work as vital to our understanding of the relationship between language and poetry. By exploring Jakobson's thesis that poetry is the primary object language, Roman Jakobson: Life, Language, Art offers a new reading of his work which includes the most radical elements of modernism. This book will be invaluable to students of Jakobson and to anyone interested in the development of critical theory, linguistics and stylistics.

Artificial Intelligence/ Human Intelligence: An Indissoluble Nexus Richard J Wallace 2021-03-02 This book presents a novel view of intelligence, and of the relationship between machine intelligence and human beings. From this perspective, machine intelligence is viewed as an artificial aid to human intelligence, and the two are seen to form a 'seamless web'. Having established this new perspective on intelligence, the book highlights some basic deficiencies of unaided human intelligence through case studies to show how human beings are capable of destroying existing intelligence networks as well as how they fail to recognize that such intelligence networks are needed. In many such cases, along with the other aspects of the problem, there is also a failure of discourse: bad arguments and the like dominate the discourse, and crucial aspects of the situation are overlooked or glossed over. The book then lays out a proposal on how to deal with this kind of problem — one that relies heavily on techniques developed in AI. This is done in the form of a new kind of grand challenge for AI, involving software monitors that are applied to discourse on major issues. All this is in keeping with the perspective on intelligence and AI presented in this book.

**Fat Wednesday** John Verdi 2010 John Verdi probes how the inexplicable connections of words can help us understand the ever-changing connections of things that we actually see in everyday experience. In his preface he writes, "I explore two related concepts: aspect-seeing and experiencing the meaning of a word." Verdi considers how our experience of seeing aspects, wherever they appear, helps us imagine possible meanings for philosophy's opening question: "What is there?" He illuminates Ludwig Wittgenstein's ideas on language and perception while challenging readers to think through for themselves the different ways in which we see. A major influence in the development of analytic philosophy, Ludwig Wittgenstein (1889-1951) was a leading thinker in the study of logic, the philosophy of mathematics, the philosophy of mind, and the philosophy of language.

Incontinence of the Void Slavoj Žižek 2019-02-26 The "formidably brilliant" Žižek considers sexuality, ontology, subjectivity, and Marxian critiques of political economy by way of Lacanian psychoanalysis. If the most interesting theoretical interventions emerge today from the interspaces between fields, then the foremost interspaceman is Slavoj Žižek. In *Incontinence of the Void* (the title is inspired by a sentence in Samuel Beckett's late masterpiece *Ill Seen Ill Said*), Žižek explores the empty spaces between philosophy, psychoanalysis, and the critique of political economy. He proceeds from the universal dimension of philosophy to the particular dimension of sexuality to the singular dimension of the critique of political economy. The passage from one dimension to another is immanent: the ontological void is accessible only through the impasses of sexualization and the ongoing prospect of the abolition of sexuality, which is itself opened up by the technoscientific progress of global capitalism, in turn leading to the critique of political economy. Responding to his colleague and fellow *Short Circuits* author Alenka Zupančič's *What Is Sex?*, Žižek examines the notion of an excessive element in ontology that gives body to radical negativity, which becomes the antagonism of sexual difference. From the economico-philosophical perspective, Žižek extrapolates from ontological excess to Marxian surplus value to Lacan's surplus enjoyment. In true Žižekian fashion, *Incontinence of the Void* focuses on eternal topics while detouring freely into contemporary issues from the Internet of Things to Danish TV series.

redefining our relations to race and racism through the lens of political correctness. By viewing comedy as both a constitutive feature of social interaction and as a necessary requirement in the appraisal of what is often deemed to be 'politically correct', this book provides an innovative and multidisciplinary approach to the study of comedy and popular culture. In doing so, it engages with the social and cultural tensions inherent to our understandings of political correctness, arguing that comedy can subversively redefine our approach to 'PC Debates', contestations surrounding free speech and the popular portrayal of political correctness in the media and society. Aided by the work of both Slavoj Žižek and Alenka Zupančič, this unique analysis adopts a psychoanalytic/philosophical framework to explore issues of race, racism and political correctness in the widely acclaimed BBC 'mockumentary', *The Office* (UK), as well as a variety of television comedies. Drawing from psychoanalysis, social psychology and philosophy, this book will be highly relevant for postgraduate students and academic researchers studying comedy, race/racism, multiculturalism, political correctness and television/film.
