Classical Chinese Medicine Liu Lihong 2019-04-19 The English edition of Liu Lihong's milestone work is a sublime beacon for the profession of Chinese medicine in the 21st century. Classical Chinese Medicine delivers a straightforward critique of the politically motivated "integration" of traditional Chinese wisdom with Western science during the last sixty years, and represents an ardent appeal for the recognition of Chinese medicine as a science in its own right. Professor Liu's candid presentation has made this book a bestseller in China, treasured not only by medical students and doctors, but by vast numbers of non-professionals who long for a state of health and well-being that is founded in a deeper sense of cultural identity. Oriental medicine education has made great strides in the West since the 1970s, but clear guidelines regarding the "traditional" nature of Traditional Chinese Medicine (TCM) remain undefined. Classical Chinese Medicine not only delineates the educational and clinical problems faced by the profession in both East and West, but transmits concrete and inspiring guidance on how to effectively engage with ancient texts and designs in the postmodern age. Using the example of the Shanghanlun (Treatise on Cold Damage), one of the most important Chinese

medicine classics, Liu Lihong develops a compelling roadmap for holistic medical thinking that links the human body to nature and the universe at large.

**Essentials of Chinese Medicine** Zhanwen Liu 2009-09-16 The Essentials of Chinese Medicine is a text book intended for international students who wish to gain a basic understanding of Chinese Medicine (CM) at the university level. The idea of writing such a text was originated from the Sino-American Consortium for the Advancement of Chinese Medicine (SACACM), which was founded in February 2000. In 1995, the British Hong Kong Administration set up a Preparatory Committee for the Development of Chinese Medicine to look into ways of bringing Chinese medical practice and herbal trade under proper control and regulation. After the reunification of Hong Kong with mainland China in 1997, the Government of the Hong Kong Special Administrative Region continued the efforts to uplift the practice of CM to a fully professional level through legislation. To help bring up a new generation of professional CM practitioners, the Hong Kong Baptist University (HKBU) obtained approval from the Government's university funding authority to develop a School of Chinese Medicine to prepare students who will meet the future professional requirements through public examinations. In order to establish itself quickly as a rigorous provider of university level CM education, HKBU sought alliance with eight major CM universities in the Chinese Mainland, and one US university which was interested in developing CM education within its medical college. As a result, the Consortium known as SACACM was formed, with ten founding institutions from Beijing, Shanghai, Nanjing, Shandong, Guangzhou, Chengdu, Heilongjiang, Hong Kong, and the United States.

???? Nigel Wiseman 2002 Chinese Medical Chinese is a highly useful work for the student or practitioner of Chinese Medicine who is acquiring the original medical language of their profession. Just as a medical student of Western medicine needs to have a grasp of Latin, it is important that the TCM student has a basic understanding of Chinese. To help with this, Chinese Medical Chinese provides invaluable information to help the student understand how the language fits in to the overall theory of Traditional Chinese Medicine and acupuncture. This title assumes that the student has already acquired a knowledge of how Chinese characters are composed, how they are written by hand and how they are pronounced. While the text itself can be navigated entirely in Pinyin, students should know how to use Chinese language dictionaries. The book is presented in two parts. The first describes the basic features of the literary language of Chinese medicine and its relationship to the language of the classical period and to the modern vernacular of northern China (Mandarin). The second part presents the vocabulary and terminology of Chinese Medicine as its component characters. The discussions that are organised in categories that cover Basic Theories, Diseases, Pathomechanisms and Pattern Identification, Principles and Methods of Treatment, Chinese Pharmaceuticals and Acupuncture. This section has self-testing items to help the reader digest this esoteric information.

Astronomy and Calendars - The Other Chinese Mathematics Jean-Claude Martzloff 2016-09-01 Presented from the viewpoint of the history of mathematics, this book explores both epistemological aspects of Chinese traditional mathematical astronomy and lunisolar calendrical calculations. The following issues are addressed: (1) connections with non-Chinese cultural areas; (2) the possibility or impossibility of using mathematics to predict astronomical phenomena, a question that was constantly raised by the Chinese from antiquity through medieval times; (3) the modes of representation of numbers, and in particular the zero, found in the context of Chinese calendrical calculations; and (4) a detailed analysis of lunisolar calendrical calculations. Fully worked-out examples and comparisons between the results of calculations and the content of Chinese historical calendars from various periods are provided. Traditional Chinese calendrical and mathematical astronomy consists of permanently reformed mathematical procedures designed to predict, but not explain, phenomena pertaining to astronomy and related areas. Yet, despite appearances, models of the mathematical techniques hidden behind this voluminous corpus reveal that they depend on a limited number of clear-cut mathematical structures. Although only a small fraction of these techniques have been fully studied, what is known surprisingly broadens our knowledge of the history of Chinese mathematics. Sinologists interested in the history of Chinese science, and anyone interested in the history of Chinese mathematics, the Chinese calendar, and the history of Chinese mathematical astronomy from its origin (104 BC) to its European reform (AD 1644) will find this book very useful. The present English language edition is a fully revised and updated version of the French original. Even though this is a research monograph in sinology, no particular sinological background is required, although a basic understanding of 'concrete mathematics' is needed. From the reviews of the French edition: This is a demanding, rigorous book to read ... worth the concentrated study it requires. The rewards are not only in the details but in the general overview that ...[it] provides. Joseph Dauben, EASTM, 2011 ...first Work in a Western language to turn to for anyone interested in the details of Chinese calendrical computations. Benno Van Dalen, ISIS, 2011 Martzloff's careful scholarship and his overall look at the calendar beyond astronomical calculations, ..., make

this book a most valuable contributions to a field of increasing interest. U. D'Ambrosio, *Mathematical Reviews*, 2013

Discussion of Cold Damage (Shang Han Lun) Guohui Liu 2015-11-21 A major new translation of the Chinese classic *Shang Han Lun* by scholar and medical doctor Guohui Liu makes this foundational text fully accessible to English speaking clinicians for the first time. Extensive study and research underpins the translation; the author's understanding of both classical and modern Chinese enables him to interpret fully the ancient work within the theory of Chinese medicine. An extensive commentary explains the translation, the difficulties with the text, how it has been subsequently translated and expands on the theory laid out in the original text to reach an understanding that can be applied in the clinic for diagnosis and treatment. The value of this classic text lies primarily in its establishment of a basic framework for differentiation and treatment, but it also presents 112 formulas and 88

medicinal substances, which are commonly applied in clinical work for various conditions. In this edition, the 112 formulas are fully explained in the context of the clinical experiences of well-known ancient and modern doctors, and they are also laid out in two appendices, cross referenced to the text.

**The Nature of Classical Chinese Medicine (Book 1 of 2)** David Nassim 2013-09 The Nature of Classical Chinese Medicine: The foundational context to re-unite myriad styles. (Book 1 of 2 - Foundation and Constitution, Energetic Anatomy and Physiology) This book (in two parts) is an extensive research project into the original essence of Classical (Han-dynasty) Chinese medicine. It is an investigation to look at how medicine might have been understood and connected to from the origin of Taoist Non-duality as expressed in the Tao Te Ching. There are today myriad styles and approaches to energy-medicine all over the world, and even within Chinese medicine itself. This book aims to connect to the unifying principle that is inclusive not exclusive, and as such has the potential to unify all medicine. This book attempts to clarify theoretical positions but with the key realization that Classical books were only pointers to instinctual health and the nature-led healing that occurs when "self" and hierarchical egotism drop out.

**Brothers** Yu Hua 2009-01-27 A bestseller in China, Brothers is an epic and wildly unhinged black comedy of modern Chinese society running amok. Here is China as we've never seen it before, in a sweeping, Rabelaisian panorama of forty years of rough-and-rumble Chinese history, from the madness of the Cultural Revolution to the equally rabid madness of extreme materialism. Yu Hua, award-winning author of *To Live*, gives us a surreal tale of two comically mismatched stepbrothers, Baldy Li, a sex-obsessed ne'er-do-well, and the bookish, sensitive Song Gang, who vow that they will always be brothers—a bond they will struggle to maintain over the years as they weather the ups and downs of rivalry in love and making and losing millions in the new China. Both tragic and absurd by turns, Brothers is a fascinating vision of an extraordinary place and time.
