Celestial Lancets Gwei-Djen Lu 2012-11-12 Using modern knowledge to shed light on ancient techniques, this text examines two of the earliest therapeutic techniques of Chinese medicine: acupuncture and moxibustion. Acupuncture is the implantation of very thin needles into subcutaneous connective tissue and muscle at a great number of different points on the body's surface; moxibustion is the burning of Artemisia tinder (moxa) either directly on the skin or just above it. For 2500 years the Chinese have used both techniques to relieve pain and to heal a wide variety of illnesses and malfunctions. Providing a full historical account of acupuncture and moxibustion in the theoretical structure of Chinese medicine, Doctors Lu and Needham combine it with a rationale of the two techniques in the light of modern scientific knowledge.

Historical Aspects of Pediatric Surgery P. P. Rickham 2012-12-06 At first sight it may appear strange that a volume of Progress in Pediatric Surgery should be devoted to the history of our specialty. One assumes that progress is concerned primarily with recent developments whilst history deals with matters of the past. However, in the past there has also been considerable progress in the development of our understanding of paediatric surgical problems, otherwise we would not have progressed to our present achievements. The editors, therefore, do not apologize for compiling this volume but, on the contrary, feel that the publication of this volume is most timely. Modern paediatric surgery has now been practised for three generations. The handful of pioneers who were the founders of our specialty worked mainly before the last world war. A few dozen of the intermediary generation started work immediately after the war, while the new generation who are now dominating our specialty must be counted in thousands. Two factors have radically altered paediatric surgery as practised by the intermediary and the present generation of surgeons.

International Perspectives on Spinal Cord Injury World Health Organization 2013 "Every year between 250 000 and 500 000 people suffer a spinal cord injury, with road traffic crashes, falls and

violence as the three leading causes. People with spinal cord injury are two to five times more likely to die prematurely. They also have lower rates of school enrollment and economic participation than people without such injuries. Spinal cord injury has costly consequences for the individual and society, but it is preventable, survivable and need not preclude good health and social inclusion. Ensuring an adequate medical and rehabilitation response, followed by supportive services and accessible environments, can help minimize the disruption to people with spinal cord injury and their families. The aims of International perspectives on spinal cord injury are to: ---assemble and summarize information on spinal cord injury, in particular the epidemiology, services, interventions and policies that are relevant, together with the lived experience of people with spinal cord injury; ---make recommendations for actions based on this evidence that are consistent with the aspirations for people with disabilities as expressed in the Convention on the Rights of Persons with Disabilities.

Shang Han Lun Zhongjing Zhang 1999 The Shang Han Lun (On Cold Damage) is among the oldest surviving, the most copiously annotated and the most revered of China's traditional medical texts. Of all of China's early medical classics, the Shang Han Lun is undoubtedly the one with the greatest relevance to the modern practice of Chinese medicine, and the one most deserving of Western attention. It was the first book to attempt to incorporate medicinal therapy into the medicine of systematic correspondences and channels and network vessels. Far ahead of its time in both theory and practice, it is not surprising that the prescriptions it contains comprise an important part of today's medicinal formulary.
