from free market champions along the way. Too Smart for Our Own Good: Ingenious Investment Strategies, Illusions of Safety, and Market Crashes Bruce I. Jacobs 2018-08-17 How investment strategies designed to reduce risk can increase risk for everyone—and can crash markets and economies Financial crises are often blamed on unforeseeable events, the unforgiving nature of capital markets, or just plain bad luck. *Too Smart for Our Own Good* argues that these crises are caused by certain alluring investment strategies that promise both high returns and safety of capital. In other words, the severe and widespread crises we have suffered in recent decades were not perfect storms. Instead, they were made by us. By understanding how and why this is so, we may be able to avoid or ameliorate future crises—and maybe even anticipate them. One of today's leading financial thinkers, Bruce I. Jacobs, examines recent financial crises—including the 1987 stock market crash, the 1998 collapse of the hedge fund Long-Term Capital Management, the 2007–2008 credit crisis, and the European debt crisis—and reveals the common threads that explain these market disruptions. In each case, investors in search of safety were drawn to novel strategies that were intended to reduce risk but actually magnified it—and blew up markets. *Too Smart for Our Own Good* takes a behind-the-curtain look at:

- The inseparable nature of investment risk and reward and the often counterproductive effects of some popular approaches for reducing risk
- A trading strategy known as portfolio insurance and the key role it played in the 1987 stock market crash
- How option-related trading disrupted markets in the decade following the 1987 crash
- Why the demise of Long-Term Capital Management in 1998 wreaked havoc on US stock and bond markets
- How mortgage-backed financial products, by shifting risk from one party to another, created the credit crisis of 2007–2008 and contributed to the subsequent European debt crisis

This broad, detailed investigation of financial crises is the most penetrating and objective look at the subject to date. In addition, Jacobs, an industry insider, offers invaluable insights into the nature of investment risk and reward, and how to manage risk. Risk is unavoidable—especially in investing—and financial markets connect us all. Until

we accept these facts and manage risk in responsible ways, major crises will always be just around the bend. Too Smart for Our Own Good is a big step toward smarter investing—and a better financial future for everyone.

Dodging Bullets Robert N. McCauley 1999-11-22 An entertaining summary of the broad reshaping of U.S. corporate finance in the last decade and a half. The late 1980s saw a huge wave of corporate leveraging. The U.S. financial landscape was dominated by a series of high-stakes leveraged buyouts as firms replaced their equity with new fixed debt obligations. Cash-financed acquisitions and defensive share repurchases also decapitalized corporations. This trend culminated in the sensational debt-financed bidding for RJR-Nabisco, the largest leveraged buyout of all time, before dramatically reversing itself in the early 1990s with a rapid return to equity. This entertaining summary of the broad reshaping of U.S. corporate finance in the last decade and a half looks at three major issues: why corporations leveraged up in the first place, why and how the leverage wave came to an end, and what policy lessons are to be drawn. Using the Minsky-Kindleberger model as a framework, the authors interpret the rise and fall of leveraging as a financial market mania. In the course of chronicling the return to equity in the 1990s, they address a number of important corporate finance questions: How important was the return to equity in relieving corporations' debt burdens? How did the return to equity affect the ability of young high-tech firms to finance themselves without selling out to foreign firms?

Multinationals as Flagship Firms Alan Rugman 2003-03-06 The international dimension of business networks has remained relatively unexplored, mainly because international business writers focus upon multinational enterprises and network writers ignore international issues. In this book Professors Alan Rugman and Joseph D'Cruz bridge the literature on networks and multinationals by introducing the new concept of the flagship firm. In each business network strategic leadership is provided by the flagship firm, which is defined as a multinational enterprise. It has other partners: key suppliers; key customers; key competitors; and key partners in the non-business infrastructure. These business networks are usually located in the 'triad' regions of the European Union, North America, and Japan. There are strong cross-border network linkages within these regions, but less 'globalization' than regional economic integration. The theory of the flagship firm/five partners model is applied to the telecommunications, chemicals, automotive, and electronics sectors, amongst others, and the book reports on both empirical studies and field research of the international competitiveness of these sectors. The book will be of interest to academics, students, and professionals in the areas of international business, strategic management, political science, law, and sociology.

Ford and the Global Strategies of Multinationals Maria Isabel Studer Noguez 2003-08-27 Today, the Multinational Enterprise (MNE) is seen as a leading agent in the process of globalization. As they adopt global strategies, MNE's are seen to be creating stronger, deeper and more lasting links amongst countries, thus shifting the balance of power inexorably in their favour, to the detriment of the state. This book interrogates this idea by undertaking a historical analysis of the global strategies of Ford.

Trade Unions and Regions Christian Lévesque 2022-08-09 *Trade Unions and Regions: Better Work, Experimentation, and Regional Governance* is about the place of workers and their unions in the modern world. It addresses current challenges for unions working in regions and the experiments that may take place at this level of governance. The book addresses pressing questions concerned with the conditions for better work and a humane society. The focus is on the capacities of unions to address questions relating to regional governance, in both supranational and sub-national regions. It examines workers and their unions in a variety of contexts: multinationals, industries, workplaces, and communities. The authors address the experiments that can be initiated by unions, governments, or employers and the ways in which collective organisations engage to address these matters in regional contexts. The analysis takes as a starting point the fracturing and divisions evident in various regions, in Australia, Canada, Mexico, Spain, the United Kingdom, and USA. The contributors propose novel analyses with lessons for unions. It should be of interest to union activists and leaders, political parties, governments, and those who make decisions in and about regions. Researchers and students of labour markets, political mobilisation, and employment relations will take the analyses further.
