Voluminous States Franck Billé 2020-07-24 From the Arctic to the South China Sea, states are vying to secure sovereign rights over vast maritime stretches, undersea continental plates, shifting ice flows, airspace, and the subsoil. Conceiving of sovereign space as volume rather than area, the contributors to *Voluminous States* explore how such a conception reveals and underscores the three-dimensional nature of modern territorial governance. In case studies ranging from the United States, Europe, and the Himalayas to Hong Kong, Korea, and Bangladesh, the contributors outline how states are using airspace surveillance, maritime patrols, and subterranean monitoring to gain and exercise sovereignty over three-dimensional space. Whether examining how militaries are digging tunnels to create new theaters of operations, the impacts of climate change on borders, or the relation between borders and nonhuman ecologies, they demonstrate that a three-dimensional approach to studying borders is imperative for gaining a fuller understanding of sovereignty. Contributors. Debhora Battaglia, Franck Billé, Wayne Chambliss, Jason Cons, Hilary Cunningham (Scharper), Klaus Dodds, Elizabeth Cullen Dunn, Gastón Gordillo, Sarah Green, Tina Harris, Caroline Humphrey, Marcel LaFlamme, Lisa Sang Mi Min, Aihwa Ong, Clancy Wilmott, Jerry Zee

The Arctic Whaling Journals of William Scoresby the Younger / Volume I / The Voyages of 1811, 1812 and 1813 William Scoresby 2022-03-11 William Scoresby (1789-1857) made his first voyage in the whaler *Resolution* from Whitby to the Greenland Sea, west of Spitsbergen, in 1800. Three years later he was formally apprenticed to his father and another three years saw him promoted to chief officer. On 5 October 1810, his twenty-first birthday, 'the earliest at which, by reason of age, I could legally hold a command', his father moved to Greenock and another ship, relinquishing the *Resolution* to his son. Another ten years would see the publication of what has been described as 'one of the most remarkable books in the English language', his two-volume *An Account of the Arctic Regions, with a History and Description of the Northern Whale-Fishery*

(1820). Even before he took command of the Resolution, two developments had occurred that, when combined with his seamanship and whaling skill, were to make that book 'the foundation stone of Arctic science' and cause the journals of his annual voyages to be remarkable accounts in their own right. First, Scoresby had studied, during two brief winters at the University of Edinburgh. Teachers such as John Playfair and Robert Jameson had made him aware of the scientific importance of his arctic experience. Together with Sir Joseph Banks, the president of the Royal Society, they encouraged him to observe, experiment and record, and provided opportunities for his data to be published. Secondly, this encouragement, and the study habits he developed at Edinburgh, led Scoresby to expand the logs of his arctic voyages into lengthy journals that contained scientific records and social and religious comment as well as detailed descriptions of navigation and whaling.

Challenges of Translation in French Literature Richard Bales 2005 In celebrating the academic career and practice of a distinguished scholar of French literature, this volume concentrates on one of Peter Broome's major preoccupations and attainments: translation. Eschewing a dogmatic, theoretical approach, the contributors (former colleagues and students) tackle four rich areas of study: modern anglophone poets' reactions to, and translations of, authors with whom they have closely identified (Racine, the Symbolists, Saint-John Perse, Valéry); problematics of translating specific poets of recent centuries (Rimbaud, Mallarmé, Valéry, Césaire, some contemporary poets);

reception and interaction in two foreign countries (Australia, Spain); and a more fluid interpretation of translation, moving the notion across into wider realms of literary expression (Mallarmé, Proust, Assia Djebar). A focalising feature, punctuating the volume, are Peter Broome's own translations of hitherto unpublished poems by five major contemporary French writers: Jean-Paul Auxeméry, Marie-Claire Bancquart, Louise Herlin, Vénus Khoury-Ghata and Jean-Charles Vegliante. The book thus intertwines theory and practice in a non-prescriptive manner which invites further elaboration and analysis.

On Sea Ice Willy Weeks 2010-06-15 Covering more than seven percent of the earth's surface, sea ice is crucial to the functioning of the biosphere—and is a key component in our attempts to understand and combat climate change. With *On Sea Ice*, geophysicist W. F. Weeks delivers a natural history of sea ice, a fully comprehensive and up-to-date account of our knowledge of its creation, change, and function. The volume begins with the earliest recorded observations of sea ice, from 350 BC, but the majority of its information is drawn from the period after 1950, when detailed study of sea ice became widespread. Weeks delves into both micro-level characteristics—internal structure, component properties, and phase relations—and the macro-level nature of sea ice, such as salinity, growth, and decay. He also explains the mechanics of ice pack drift and the recently observed changes in ice extent and thickness. An unparalleled account of a natural phenomenon that will be of increasing importance as the earth's temperature rises, *On Sea Ice* will unquestionably be the standard for years to come.

Ice Mariana Gosnell 2011-04-27 Like the adventurer who circled an iceberg to see it on all sides, Mariana Gosnell, former Newsweek reporter and author of *Zero Three Bravo*, a book about flying a small plane around the United States, explores ice in all its complexity, grandeur, and significance. More brittle than glass, at times stronger than steel, at other times flowing like molasses, ice covers 10 percent of the earth's land and 7 percent of its oceans. In nature it is found in myriad forms, from the delicate needle ice that crunches underfoot in a winter meadow to the massive, centuries-old ice that forms the world's glaciers. Scientists theorize that icy comets delivered to Earth the molecules needed to get life started, and ice ages have shaped much of the land as we know it. Here is the whole world of ice, from the freezing of Pleasant Lake in New Hampshire to the breakup of a Vermont river at the onset of spring, from the frozen Antarctic landscape that emperor penguins inhabit to the cold, watery route bowhead whales take between Arctic ice floes. Mariana Gosnell writes about frostbite and about the recently discovered 5,000-year-old body of a man preserved in an Alpine glacier. She discusses the work of scientists who extract cylinders of Greenland ice to study the history of the earth's climate and try to predict its future. She examines ice in plants, icebergs, icicles, and hail; sea ice and permafrost; ice on Mars and in the rings of Saturn; and several new forms of ice developed in labs. She writes of the many uses humans make of ice, including ice-skating, ice fishing, iceboating, and ice climbing; building ice roads and seeding clouds; making ice castles, ice cubes, and iced desserts. Ice is a sparkling illumination of the natural phenomenon whose ebbs and flows over time have helped form the world we live in. It is a pleasure to read, and important to read—for its natural science and revelations about ice's influence on our everyday lives, and for what it has to tell us about our environment today and in the future.
