*Reconsidering Olmec Visual Culture* Carolyn E. Tate 2012-01-18 Recently, scholars of Olmec visual culture have identified symbols for umbilical cords, bundles, and cave-wombs, as well as a significant number of women portrayed on monuments and as figurines. In this groundbreaking study, Carolyn Tate demonstrates that these subjects were part of a major emphasis on gestational imagery in Formative Period Mesoamerica. In *Reconsidering Olmec Visual Culture*, she identifies the presence of women, human embryos, and fetuses in monuments and portable objects dating from 1400 to 400 BC and originating throughout much of Mesoamerica. This highly original study sheds new light on the prominent roles that women and gestational beings played in Early Formative societies, revealing female shamanic practices, the generative concepts that motivated caching and bundling, and the expression of feminine knowledge in the 260-day cycle and related divinatory and ritual activities. *Reconsidering Olmec Visual Culture* is the first study that situates the unique hollow babies of Formative Mesoamerica within the context of prominent females and the prevalent imagery of gestation and birth. It is also the first major art historical study of La Venta and the first to identify Mesoamerica's earliest creation narrative. It provides a more nuanced understanding of how later societies, including Teotihuacan and West Mexico, as well as the Maya, either rejected certain Formative Period visual forms, rituals, social roles, and concepts or adopted and transformed them into the enduring themes of Mesoamerican symbol systems.

**Interdisciplinary Research in Technology and Management** Satyajit Chakrabarti 2021-09-14 The conference on ‘Interdisciplinary Research in Technology and Management’ was a bold experiment in deviating from the traditional approach of conferences which focus on a specific topic or theme. By attempting to bring diverse inter-related topics on a common platform, the conference has sought to answer a long felt need and give a fillip to interdisciplinary research not only within the technology domain but across domains in the management field as well. The spectrum of topics covered in the research papers is too wide to be singled out for specific mention but it is noteworthy that these papers addressed many important and relevant concerns of the day.

*Italian Cuisine* Alberto Capatti 2003-09-17 Italy, the country with a hundred cities and a thousand bell towers, is also the country with a hundred cuisines and a thousand recipes. Its great variety of culinary practices reflects a history long dominated by regionalism and political division, and has led to the common conception of Italian food as a mosaic of regional customs rather than a single tradition. Nonetheless, this magnificent new book demonstrates the development of a distinctive, unified culinary tradition throughout the Italian peninsula. Alberto Capatti and Massimo Montanari uncover a network of culinary customs, food lore, and cooking practices, dating back as far as the Middle Ages, that are identifiably Italian: o Italians used forks 300 years before other Europeans, possibly because they were needed to handle pasta, which is slippery and dangerously hot. o Italians invented the practice of chilling drinks and may have invented ice cream. o Italian culinary practice influenced the rest of Europe to place more emphasis on vegetables and less on meat. o Salad was a distinctive aspect of the Italian meal as early as the sixteenth century. The authors focus on culinary developments in the late medieval, Renaissance, and Baroque eras, aided by a wealth of cookbooks produced throughout the early modern period. They show how Italy's culinary identities emerged over the course of the centuries through an exchange of information and techniques among geographical regions and social classes. Though temporally, spatially, and socially diverse, these cuisines refer to a common experience that can be described as Italian. Thematically organized around key issues in culinary history and beautifully illustrated, *Italian Cuisine* is a rich history of the ingredients, dishes, techniques, and social customs behind the Italian food we know and love today.

Societies in Transition in Early Greece Alex R. Knodell 2021-05-25 A free open access ebook is available upon publication. Learn more at [www.luminosoa.org](http://www.luminosoa.org). Situated at the disciplinary boundary between prehistory and history, this book presents a new synthesis of Late Bronze Age and Early Iron Age Greece, from the rise and fall of Mycenaean civilization, through the "Dark Age," and up to the emergence of city-states in the Archaic period. This period saw the growth and decline of varied political systems and the development of networks that would eventually expand to nearly all shores of the Middle Sea. Alex R. Knodell argues that in order to understand how ancient Greece changed over time, one must analyze how Greek societies constituted and reconstituted themselves across multiple scales, from the local to the regional to the Mediterranean. Knodell employs innovative network and spatial analyses to understand the regional diversity and connectivity that drove the growth of early Greek polities. As a groundbreaking study of landscape, interaction, and sociopolitical change, *Societies in Transition in Early Greece* systematically bridges the divide between the Mycenaean period and the Archaic Greek world to shed new light on an often-overlooked period of world history.

*Czech Lands, Part 1* Lucie Storchová 2020-09-07 The Companion to Central and Eastern European Humanism: The Czech Lands is the first reference work on humanists and their literary activities in this region to appear in English. It provides biographical and bibliographical data about humanist literary life between c. 1480 and 1630, in two volumes, organised alphabetically by authors' names. This first volume includes three introductory chapters together with more than 130 biographical entries covering the letters A-L and a complete overview of the most recent research on humanism in Central Europe. The interdisciplinary research team behind this Companion paid particular attention to local approaches to the classical tradition, to humanistic multilingualism and to Bohemian authors' participation in European scholarly networks. The Companion is a highly relevant resource for all academics who are interested in humanism and the history of early modern literature in Central Europe.

**Pattern Recognition** M. Narasimha Murty 2011-05-25 Observing the environment and recognising patterns for the purpose of decision making is fundamental to human nature. This book deals with the scientific discipline that enables similar perception in machines through pattern recognition (PR), which has application in diverse technology areas. This book is an exposition of principal topics in PR using an algorithmic approach. It provides a thorough introduction to the concepts of PR and a systematic account of the major topics in PR besides reviewing the vast progress made in the field in recent times. It includes basic techniques of PR, neural networks, support vector machines and decision trees. While theoretical aspects have been given due coverage, the emphasis is more on the practical. The book is replete with examples and illustrations and includes chapter-end exercises. It is designed to meet the needs of senior undergraduate and postgraduate students of computer science and allied disciplines.
