NSSC Biology Module 3 Ngepathimo Kadhila 2005-10-01 NSSC Biology is a course consisting of three Modules, an Answer Book and a Teacher's Guide. The course has been written and designed to prepare students for the Namibia Senior Secondary Certificate (NSSC) Ordinary and Higher Level, or similar examinations. The modules have been developed for distance learners and learners attending schools. NSSC Biology is high-quality support material. Features of the books include: ' modules divided into units, each focusing on a different theme ' stimulating and thought-provoking activities, designed to encourage critical thinking ' word boxes providing language support ' highlighted and explained key terminology ' step-by-step guidelines aimed towards achieving the learning outcomes ' self-evaluation to facilitate learning and assess skills and knowledge ' clear distinction between Ordinary and Higher Level content ' an outcomes-based approach encouraging student-centred learning ' detailed feedback in the Answer Book promoting a thorough understanding of content through recognising errors and correcting them.

Laboratory and Field Investigations in Marine Life Gordon Dudley 2011-03-15 This unique marine biology laboratory and field manual engages students in the excitement and challenges of understanding marine organisms and the environments in which they live. Students will benefit from a thorough examination of topics such as the physical and chemical properties of seawater, marine microbes, algae, and a wide variety of invertebrate and vertebrate animals through observation and critical thinking activities. The manual also includes suggested topics for additional investigation, which provides flexibility for both instructors and students who wish to further explore various topics of interest. *Laboratory and Field Investigations in Marine Life* is the ideal compliment to any marine biology teaching and learning package.

The Study of Animal Behaviour Felicity Huntingford 2012-12-06 The aim of this book is to identify the main areas of active discussion about, and research into, the biology of animal behaviour, to describe and assess ways in which these can be studied and using selected examples, to illustrate the kinds of results which are emerging. It is not intended to provide an exhaustive review of all we know about animal behaviour, although the examples have been chosen to cover as many as possible of the things that animals do. XIV Preface Acknowledgements I would like to thank C. Swann, M.L.N. Murthy and the Superbrain for typing the manuscript; Linda Partridge, Pat Monaghan, Douglas Fraser and Richard Wilson for constructive criticism of earlier drafts; Alan Crowden for help in planning and producing the book and, particularly, Tim Huntingford for help and encouragement at all stages of its production. Acknowledgements are gratefully made to Jim Tulley for producing plates 1, 2, 3, 7 and 12 and to Michael Hansell for the remainder.

Place-Based Science Teaching and Learning Cory A. Buxton 2011-05-05 Forty classroom-ready science teaching and learning activities for elementary and middle school teachers Grounded in theory and best-practices research, this practical text provides elementary and middle school teachers with 40 place-based activities that will help them to make science learning relevant to their students. This text provides teachers with both a rationale and a set of strategies and activities for teaching science in a local context to help students engage with science learning and come to understand the importance of science in their everyday lives.

Insects and Human Life Brian Morris 2006-01-01 This pioneering book looks at the importance of insects to culture. While in the developed West a good deal of time and money may be spent trying to exterminate insects, in other cultures human-insect relations can be far more subtle and multi-faceted. Like animals, insects may be revered or reviled - and in some tribal communities insects may be the only source of food available. How people respond to, make use of, and relate to insects speaks volumes about their culture. In an effort to get to the bottom of our vexed relationship with the insect world, Brian Morris spent years in Malawi, a country where insects proliferate and people contend. In Malawi as in many tropical regions, insects have a profound impact on agriculture, the household, disease and

medicine, and hence on oral literature, music, art, folklore, recreation and religion. Much of the complexity of human-insect relations rests on paradox: insects may represent the source of contagion, but they are also integral to many folk remedies for a wide range of illnesses. They may be at the root of catastrophic crop failure, but they can also be a form of sustenance. Weaving science with personal observations, Morris demonstrates a profound and intimate knowledge of virtually every aspect of human-insect relations. Not only is this book extraordinarily useful in terms of the more practical side of entomology, it also provides a wealth of information on the role of insects in cultural production. Malawian proverbs alone provide many such delightful examples - 'Bemberezi adziwa nyumba yake' ('The carpenter bee knows his own home'). This final volume in Morris' trilogy on Malawi's animal and insect worlds is certain to become a classic study of uncharted territory - the insect world that surrounds us and how we relate to it. Praise for *The Power of Animals*: Although based upon examination of a single culture, Morris incorporates ecological and anthropological concepts that expand this study of

e-Lower Secondary Science Learning Through Diagrams S.H. Chan 2012-03-13 You will find this book interesting: Science concepts presented in a diagrammatic form. Specially written to ease learning and to stimulate interest in Science, this book will help students in acquiring and reinforcing Science concepts, and especially the difficult ones, more easily and effectively. This book makes learning easier through the following features: Learning Outcomes - Learning outcomes on the header point out the concepts that you should focus on in the process of learning. Important Concepts and Key Terms - The important concepts and key terms are presented clearly in simple language. Further explanations linked to the diagrams help you better understand the concepts. Interesting Visuals - Visual aids such as concept maps, flow charts and annotated diagrams are integrated to make the concepts easier to understand and remember. Real-life Examples - These examples show real-life application of concepts and explain the inquiries on the phenomena that happen in our everyday lives. Worked Examples - Step-by-step worked examples help to reinforce your skills in solving problems. Instant Facts - These are extra information that can help you acquire a more in-depth understanding of the topic under discussion. This book complements the school curriculum and will certainly help in your preparation for the examinations.

Laboratory Manual for Non-Majors Biology James W. Perry 2012-06-06 One of the best ways for your students to succeed in their biology course is through hands-on lab experience. With its 46 lab exercises and hundreds of color photos and illustrations, the LABORATORY MANUAL FOR NON-MAJORS BIOLOGY, Sixth Edition, is your students' guide to a better understanding of biology. Most exercises can be completed within two hours, and answers to the exercises are included in the Instructor's Manual. The perfect companion to Starr and Taggart's BIOLOGY: THE UNITY AND DIVERSITY OF LIFE, as well as Starr's BIOLOGY:

Five Kingdoms Lynn Margulis 1998 An all-inclusive catalogue of the world's living diversity, Five Kingdoms defines and describes the major divisions, or phyla, of nature's five great kingdoms - bacteria, protocists, animals, fungi, and plants - using a modern classification scheme that is consistent with both the fossil record and molecular data. Generously illustrated and remarkably easy to follow, it not only allows readers to sample the full range of life forms inhabiting our planet but to familiarize themselves with the taxonomic theories by which all organisms' origins and distinctive characteristics are traced and classified.

Charley Harper's Animal Kingdom Todd Oldham 2015-09-01 Celebrated designer Todd Oldham opens another treasure trove of unseen and unpublished illustrations in the new AMMO Books release, "Charley Harper's Animal Kingdom." Todd has done it again by going deeper into Charley Harper's extensive archive to create the ultimate companion to "An Illustrated Life" and present the absolute best of Charley's previously hidden illustrations. Ranging from bugs and birds to all creatures of land and sea from the bountiful imagination of the artist, animal lovers and fans of Charley alike will be thrilled with this stunning new collection. Featuring more than 300 previously unseen illustrations, "Charley Harper's Animal Kingdom" includes illustrations created during a span of more than sixty years and appeals to a wide range of audiences both young and old. AMMO Books has published four different bestselling formats of "Charley Harper: An Illustrated Life." Charley and his work have been profiled in an array of media, including "CBS Sunday Morning" and dozens of international magazines and newspapers such as Dwell, The New York Times, and many others.

Examining Ecology Paul A. Rees 2017-11-27 Examining Ecology: Exercises in Environmental Biology and Conservation explains foundational ecological principles using a hands-on approach that features analyzing data, drawing graphs, and undertaking practical exercises that simulate field work. The book provides students and lecturers with real life examples to demonstrate basic principles. The book helps students, instructors, and those new to the field learn about the principles of ecology and conservation by completing a series of problems. Prior knowledge of the subject is not assumed; the work requires users to be able to perform simple calculations and draw graphs. Most of the exercises in the book have been used widely by the author's own students over a number of years, and many are based on real data from published research. Exercises are succinct with a broad number of options, which is a unique feature among similar books on this topic. The book is primarily intended as a resource for students, academics, and instructors studying, teaching, and working in zoology, ecology, biology, wildlife conservation and management, ecophysiology, behavioural

ecology, population biology and ecology, environmental biology, or environmental science. Students will be able to progress through the book attempting each exercise in a logical sequence, beginning with basic principles and working up to more complex exercises. Alternatively they may wish to focus on specific chapters on specialist areas, e.g., population dynamics. Many of the exercises introduce students to mathematical methods (calculations, use of formulae, drawing of graphs, calculating simple statistics). Other exercises simulate fieldwork projects, allowing users to 'collect' and analyze data which would take considerable time and effort to collect in the field. Facilitates learning about the principles of ecology and conservation biology through succinct, yet comprehensive real-life examples, problems, and exercises Features authoritatively and consistently written foundational content in biodiversity, ecophysiology, behavioral ecology, and more, as well as abundant and diverse cases for applied use Functions as a means of learning ecological and conservation-related principles by 'doing', e.g., by analyzing data, drawing graphs, and undertaking practical exercises that simulate field work, and more Features approximately 150 photos and figures created and produced by the author

Mammals Katharine Hall 2016-02-10 All mammals share certain characteristics that set them apart from animal classes. But some mammals live on land and other mammals spend their lives in water—each is adapted to its environment. Land mammals breathe oxygen through nostrils but some marine mammals breathe through blowholes. Compare and contrast mammals that live on land to those that live in the water.
