Beyond Crises Debbie Zacarian 2021-02-16 What are some lessons learned from the pandemic? We learned that, in times of crises, the humanitarian needs of

students, families, and ourselves must be a top priority. We learned that forming effective partnerships with families and communities is essential to the health and well-being of our children. We were offered a blunt reminder that a system designed to serve the interests of a privileged few was destined to fail our historically underserved students, especially our millions of multilingual learners. Above all, we learned that the "normal" many of us have yearned for was never good enough—that we must envision a "better world," where we build on our multilingual students' unique assets and cultivate their inner brilliance. Only then will we deliver on their promise. It's this "better world," a world in which communities, schools, and classrooms work together as a "whole-child ecosystem," Beyond Crises: Overcoming Linguistic and Cultural Inequities in Communities, Schools, and Classrooms sets out to create. Taking a look from the outside in, Debbie Zacarian, Margarita Calderón, and Margo Gottlieb address three critical arenas: 1. Imagining Communities describes how to design and enact strengths-based family and community partnerships, including the critical importance of identifying, valuing, and acknowledging each member's assets and competencies, and the ways recent crises have amplified their struggles. 2. Imagining Schools takes an up-close look at policies, structures, and now irrelevant ways of schooling that call for change and how we might reconfigure professional development to ensure every teacher and administrator is dedicated to the well-being and success of our multilingual learners. 3. Imagining Classrooms demonstrates how to optimize learning opportunities—both virtual and face-to-face—so our diverse students grow cognitively, linguistically, and social-emotionally, and accentuate their talents in knowing and using multiple languages in linguistically and culturally sustainable environments. "Student and family, classroom, school, and local community are not silos unto themselves," Debbie, Margarita, and Margo insist. "They are part of a larger whole that is interrelated and interconnected and, even, interdependent on each other. By forming stronger alliances, we can realize the power of truly working, socializing, and flourishing together." Beyond Crises is the first critical step forward.

The SAGE Encyclopedia of Educational Technology J. Michael Spector 2015-01-29 Leveraging the power of technology to support teaching and learning is certainly not new. But with more low-cost, easy-to-use, easily accessible devices and systems than ever before, we are at a critical inflection point where we must decide how technology powers and aids learning in the classroom. But is new technology the cure-all all? Some studies have shown students retain information better in traditional print formats. There's no question about the

potential for new technologies to improve learning, but it's all in how it's approached, adapted, and used toward the service of achieving real gains in student performance. It's issues like this that are explored within the pages of this new Encyclopedia. To maximize shelf life, the editor and authors strove to focus on core topics and issues that will retain relevance in the face of perpetually evolving devices, services and specific techniques. Features include: A collection of 300-350 entries that are organized in A-to-Z fashion in two volumes available in a choice of print or electronic formats. Entries, authored by key figures in the field, conclude with cross references and further readings. Although organized A-to-Z, a Reader's Guide groups related articles within broad, thematic areas. A detailed Index, the Reader's Guide themes, and Cross References combine for search-and-browse in the electronic version.

How People Learn II National Academies of Sciences, Engineering, and Medicine 2018-10-27 There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, How People Learn: Brain, Mind, Experience, and School:

Expanded Edition was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. How People Learn II: Learners, Contexts, and Cultures provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. How People Learn II will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.
