Women, Fire, and Dangerous Things George Lakoff 2008-08-08 "Its publication should be a major event for cognitive linguistics and should pose a major challenge for cognitive science. In addition, it should have repercussions in a variety of disciplines, ranging from anthropology and psychology to epistemology and the philosophy of science. . . . Lakoff asks: What do categories of language and thought reveal about the human mind? Offering both general theory and minute details, Lakoff shows that categories reveal a great deal."—David E. Leary, American Scientist

'Pataphysics Christian Bok 2002 'Pataphysics, the pseudoscience imagined by Alfred Jarry, has so far, because of its academic frivolity and hermetic perversity, attracted very little scholarly or critical inquiry, and yet it has inspired a century of experimentation. Tracing the place of 'pataphysics in the relationship between science and poetry, Christian Bök shows it is fundamental to the nature of the postmodern, and considers the work of Alfred Jarry and its influence on others. A long overdue critical look at a significant strain of the twentieth-century avant-garde, 'Pataphysics: The Poetics of Imaginary Science raises important historical, cultural, and theoretical issues germane to the production and reception of poetry, the ways we think about, write, and read it, and the sorts of claims it makes upon our understanding.

The Multiverse Ana Ana Alonso-Serrano 2020-06-15 The multiverse is a concept that acknowledges the existence of a multiplicity of worlds or universes. The designs of these universes do not have to be the same as our universe, but we have no clear view of what the "other" designs might be. It is suspected that they can obey different laws of physics and different constants of physics, which further implies different chemistry, biology, and life. Some say that the universes within the multiverse allow for different mathematics or even for different metamathematical logic. This book discusses most of the above aspects of the multiverse concept starting with the philosophy, through all the mathematical and physical subtleties, finally exploring the origin of life and consciousness. This book provides a satisfying intellectual exploration of front-edge advances in contemporary cosmology.

Searching for Extraterrestrial Intelligence H. Paul Shuch 2011-02-14 This book is a collection of essays written by the very scientists and engineers who have led, and continue to lead, the scientific quest known as SETI, the search for extraterrestrial intelligence. Divided into three parts, the first section, 'The Spirit of SETI Past', written by the surviving pioneers of this then emerging discipline, reviews the major projects undertaken during the first 50 years of SETI science and the results of that research. In the second section, 'The Spirit of SETI Present', the present-day science and technology is discussed in detail, providing the technical background to contemporary SETI instruments, experiments, and analytical techniques, including the processing of the received signals to extract potential alien communications. In the third and final section, 'The Spirit of SETI Future', the book looks ahead to the possible directions that SETI will take in the next 50 years, addressing such important topics as interstellar message

construction, the risks and assumptions of interstellar communications, when we might make contact, what aliens might look like and what is likely to happen in the aftermath of such a contact.
