Making Number Talks Matter Cathy Humphreys 2015-04-28 Making Number Talks Matter is about the myriad decisions facing teachers as they make this fifteen-minute daily routine a vibrant and vital part of their mathematics instruction. Throughout the book, Cathy Humphreys and Ruth Parker offer practical ideas for using Number Talks to help students learn to reason numerically and build a solid foundation for the study of mathematics. This book will be an invaluable resource whether you are already using Number Talks or not; whether you are an elementary, middle school, high school, or college teacher; or even if you are a parent wanting to support your child with mathematics. Using insight gained from many years of doing Number Talks with students of all ages, Cathy and Ruth address questions to ask during Number Talks, teacher moves that turn the thinking over to students, the mathematics behind the various strategies, and ways to overcome bumps in the road. If you've been looking for ways to transform your mathematics classroom--to bring sense-making and divergent thinking to the foreground, to bring the Standards for Mathematical Practice to life, and to bring joy back into your instruction--this book is for you.

The Primary Curriculum Patricia Driscoll 2011-08-12 Lecturers, why waste time waiting for the post to arrive? Request and receive your e-inspection copy today! Providing an overview of the knowledge, skills and understanding needed to teach the primary curriculum, this book offers an informed critical approach to the teaching of core and foundation subjects in primary education. Underpinned by contemporary research and current policy The Primary Curriculum combines coverage of key subject-specific issues with relevant pedagogical approaches to teaching, offering a comprehensive overview of each major subject of primary education. Particular emphasis is placed on cross-curricular and creative approaches to teaching intelligently across different subject areas within the current curriculum framework. Curriculum progression from Foundation Stage through to Key Stage 2 is also emphasised. The Primary Curriculum is an essential companion for all students on primary initial teacher education courses. Patricia Driscoll and Judith Roden are established primary education authors and teach on initial teacher education courses at Canterbury Christ Church University. Andrew Lambirth is Professor of Education at University of Greenwich.

Men and the Classroom Sheelagh Drudy 2005-08-26 The teaching of young children has long been dominated by women. This global phenomenon is firmly rooted in issues related to economic development, urbanization, the position of women in society, cultural definitions of masculinity and the values of children and childcare. Yet, amongst the media scare stories and moral panics about underachieving boys, there are surprisingly few empirically-supported answers to vital questions such as: Is the feminisation of teaching really a problem? How is the relationship of gender and teaching considered within a framework of feminist theory? What are the perceptions of students of teaching, in comparison to other professions? Why are so few men attracted to teaching? Can more men be attracted into the classroom? The authors of this groundbreaking book have undertaken the largest, most in-depth study ever carried out on this topic, in order to assess both teachers and students' views across primary education.

New Non-reading Intelligence Tests 1-3 Manual Dennis Young 2012 Updated and restandardised, these group tests allow you to assess pupils' general ability independently of their reading, and help to identify underachieving pupils from age 6 to 14. The New Non-Reading Intelligence Tests (NNRIT) comprise three tests for use with separate age groups: NNRIT 1 is for pupils aged 6:2 to 8:10; NNRIT 2 is for ages 7:2 to 9:10; and NNRIT 3 is for ages 8:2 to 11:10 in primary schools and 10:2 to 13:10 for average- and lower-ability students in secondary schools. These are group tests are presented orally by the teacher, enabling general ability to be assessed independently of reading. The NNRIT tests assess aspects of language and thinking that are not necessarily represented in measures of pupil attainments, and help to pinpoint low-achieving and slow-reading pupils who may nevertheless have high underlying ability. Fully updated and restandardised on over 8000 pupils, the NNRIT tests retain the administrative simplicity which makes them so easy to give and score. This revision updates the item vocabulary and contexts, while also reducing the number of questions - from 80 to 60 items per test - making administration and scoring even quicker. Each test takes about 30-35 minutes to give. The NNRIT tests do not employ reading, pictorial or numerical items, and the oral administration allows poor readers to

do themselves full justice. Each test comprises four language-based subtests - which one?, odd-one-out, analogies and opposites - each prefaced with two practice questions, and expresses a pupil's ability as a standardised score. The same marking template can be used with all three tests.

Literacy Development in the Early Years: Helping Children Read and Write Lesley Mandel Morrow 2013-08-27 An integrated language arts approach to literacy development that brings early childhood perspectives on how children learn in pre-kindergarten through grade three, together with explicit teaching of literacy skills and strategies teachers need to make it all work. Pre-service and in-service teachers get a wealth of valuable information for making children active participants in the process of literacy development with this integrated approach to language arts. The book encourages teaching reading, writing, listening, thinking, and viewing at the same time, using each skill to develop the others, and discusses both constructivist problem-solving teaching and more explicit systematic instruction. Through both theoretical and research-based rationales, plus extensive practical applications, renowned author Lesley Mandel Morrow presents literacy development as an active process between children and adults to create meaning and real purpose—and helps pre- and in-service teachers grasp the scope and complexity of early literacy development. This comprehensive, balanced approach to literacy teaching and learning covers oral language development, word study, phonological awareness, phonics, comprehension, listening and writing. The reader is provided with a complete picture of early literacy development.

Lone Parenthood in the Life Course Laura Bernardi 2017-11-08 Lone parenthood is an increasing reality in the 21st century, reinforced by the diffusion of divorce and separation. This volume provides a comprehensive portrait of lone parenthood at the beginning of the XXI century from a life course perspective. The contributions included in this volume examine the dynamics of lone parenthood in the life course and explore the trajectories of lone parents in terms of income, poverty, labour, market behaviour, wellbeing, and health. Throughout, comparative analyses of data from countries as France, the United Kingdom, Ireland, Germany, Belgium, Sweden, Switzerland, Hungary, and Australia help portray how lone parenthood varies between regions, cultures, generations, and institutional settings. The findings show that one-parent households are inhabited by a rather heterogeneous world of mothers and fathers facing different challenges. Readers will not only discover the demographics and diversity of lone parents, but also the variety of social representations and discourses about the changing phenomenon of lone parenthood. The book provides a mixture of qualitative and quantitative studies on lone parenthood. Using large scale and longitudinal panel and register data, the reader will gain insight in complex processes across time. More qualitative case studies on the other hand discuss the definition of lone parenthood, the public debate around it, and the social and subjective representations of lone parents themselves. This book aims at sociologists, demographers, psychologists, political scientists, family therapists, and policy makers who want to gain new insights into one of the most striking changes in family forms over the last 50 years. This book is open access under a CC BY License.

Immersion Education Pádraig Ó Duibhir 2018-05-01 The body of research in this volume offers a detailed account of the success of young immersion learners of Irish in becoming competent speakers of the minority language. Taking account of in-class and out-of-class factors, it examines the variety of Irish spoken by the pupils, the extent to which the Irish spoken deviates from native-speaker norms, the degree to which pupils are aware of and attempt to acquire a native-like variety and the extent to which issues of identity and motivation are involved. The results highlight the limitations of an immersion system in generating active and accurate users of the language outside the immersion setting and will help immersion educators to gain a greater understanding of how young immersion learners learn and acquire the target language. The findings are placed in the context of other one-way immersion programmes internationally with a particular focus on minority language settings, and make an important contribution not only to our understanding of the Irish issues, but how the Irish situation can be placed in a broader scholarly and socio-political context.
