Changing Forms of Employment Rosemary Crompton 2002-03-11 During the last two decades there has been widespread evidence of change in specific aspects of employing organizations, employment and employment related institutions. Changing Forms of Employment looks at the underlying trends which generate pressures towards a fundamental reshaping of social institutions in three ways: changes in the organization of production, particularly those associated with the growth of service dominated economics; the effects of technological change, particularly those associated with Information Technology; the erosion of the 'male breadwinner' (or single earner) model of employment and household. These trends have resulted in strains and ruptures in the organization and regulation of employment, and related institutions including trade unions, employers, and households. The task of the next decade is to both reconstruct relationships, and to renew institutions.

Movies of the 40s Jürgen Müller 2005 A trendsetting decade in world cinema The 40s were the decade of the movies. With the world at war, directors served up propaganda and escapist entertainment to the massed moviegoers of the pre-television age. Yet in many countries, there was also a parallel tendency towards greater realism. In Italy, for example, the spirit of the resistance culminated in the neorealist movement, which inspired the world's moviemakers with masterpieces such as De Sica's *Bicycle Thieves* (1948). In Hollywood, the 40s were probably the most creative phase in the studios' history. Never before had the Dream Factory brought such compellingly edgy and experimental films to the silver screen. The most seminal work of the decade was *Citizen Kane* (1941); Orson Welles's extravagantly original debut anticipated the expressive visual

style that would come to typify film noir?the genre of ?dark movies, ? populated by romantic antiheroes and femmes fatales, that still represents the essence of cinema for many passionate movie buffs. In the atmospheric black-and-white universe of noir, Rita Hayworth, Ava Gardner, and Lauren Bacall became timeless erotic icons, while Bogart?following *The Big Sleep* (1945)?was the very quintessence of cool. While these movies bore witness to the cracks in America's facade, another genre was busily reconstituting the nation's identity. In the films of John Ford, the Western came back with a vengeance, Monument Valley embodied America's incomparable grandeur, and John Wayne (*The Duke*) was a natural aristocrat of the wild frontier.

Cleaning Painted Surfaces Richard Wolbers 2000 This book contributes significantly to the selection of appropriate and controllable cleaning methods for varnished and unvarnished paint surfaces. It is a distillation of many years' experience of formulating a cleaning treatment for any given object. The general principles of the chemistry and the practical applications are described. The methods are applicable to the surface cleaning of both traditional and modern paint media found on sculptures, ethnographic materials, paintings, gilded surfaces and furniture. Aqueous methods are certainly worth considering for those surfaces which cannot be cleaned safely by methods based on solvents.

Oxide-based Systems at the Crossroads of Chemistry C. Colella 2001-11-27 This volume includes papers presented at the second International Workshop on Oxide-based Systems at the Crossroads of Chemistry, held at Villa Olmo in Como,

Italy, 8-11 October. The selected papers present the highlights of recent research in the field of oxide structure. A wide range of oxidic materials, including real oxides, zeolites and layer-structured systems, is considered and described in terms of preparation methods, structural characterization and the relation between active sites, structure and catalytic properties. The application of the most powerful simulation and physical-chemical techniques show their usefulness in discovering and explaining structural and dynamic properties of complex materials. Moreover the development of sophisticated spectroscopical and analytical techniques are shown to significantly improve the growth of surface oxide science, generating new tools for the knowledge of catalyst structure and reaction mechanisms. An interesting feature is the inclusion of papers which show the mutual roles of experiment and theoretical models.

Florence Guido Zucconi 1995 This book looks at how the human brain got the capacity for language and how language then evolved. Its four parts are concerned with different views on the emergence of language, with what language is, how it evolved in the human brain, and finally how this process led to the properties of language. Part I considers the main approaches to the subject and how far language evolved culturally or genetically. Part II argues that language is a system of signs and considers how these elements first came together in the brain. Part III examines the evidence for brain mechanisms to allow the formation of signs. Part IV shows how the book's explanation of language origins and evolution is not only consistent with the complex properties of languages but provides the basis for a theory of syntax that offers insights into the learnability of language and to the nature of constructions that have defied decades of linguistic analysis, including including subject-verb inversion in questions, existential constructions, and long-distance dependencies. Denis Bouchard's outstandingly original account will interest linguists of all persuasions as well as cognitive scientists and others interested in the evolution of language.

Engaging with Records and Archives Fiorella Foscarini 2016-11-17 This collection provides a multifaceted response to today's growing fascination with the idea of the archive and showcases the myriad ways in which archival ideas and practices are being engaged and developed by emerging and internationally renowned scholars. *Engaging with Records and Archives* offers a selection of original, insightful and imaginative papers from the Seventh International Conference on the History of Records and Archives (I-CHORA 7). The contributions in this volume comprise a wide variety of views of records, archives and archival functions, spanning diverse regions, communities, disciplinary perspectives and time periods. From the origins of contemporary grassroots archival activism in Poland to the role of women archivists in early

20th century England; from the management of records in the Dutch East Indies in the 19th century to the relationship between Western and Indigenous cultures in North America and other modern archival conundrums, this collection reveals the richness of archival thinking through compelling examples from past and present that will captivate the reader. Readership: This book will be useful reading for both scholars and practitioners, including archivists, records managers and other media and information professionals. Bridging archival, information, and library science; the digital humanities; art history; social history; culture and media studies; data curation; and communication, students and researchers across the disciplines are sure to find inspiration.

The Oxford Handbook of Egyptian Epigraphy and Palaeography Vanessa Davies 2020-02-28 The unique relationship between word and image in ancient Egypt is a defining feature of that ancient culture's records. All hieroglyphic texts are composed of images, and large-scale figural imagery in temples and tombs is often accompanied by texts. Epigraphy and palaeography are two distinct, but closely related, ways of recording, analyzing, and interpreting texts and images. This Handbook stresses technical issues about recording text and art and interpretive questions about what we do with those records and why we do it. It offers readers three key things: a diachronic perspective, covering all ancient Egyptian scripts from prehistoric Egypt through the Coptic era (fourth millennium BCE-first half of first millennium CE), a look at recording techniques that considers the past, present, and future, and a focus on the experiences of colleagues. The diachronic perspective illustrates the range of techniques used to record different phases of writing in different media. The consideration of past, present, and future techniques allows readers to understand and assess why epigraphy and palaeography is or was done in a particular manner by linking the aims of a particular effort with the technique chosen to reach those aims. The choice of techniques is a matter of goals and the records' work circumstances, an inevitable consequence of epigraphy being a double projection: geometrical, transcribing in two dimensions an object that exists physically in three; and mental, an interpretation, with an inevitable selection among the object's defining characteristics. The experiences of colleagues provide a range of perspectives and opinions about issues such as techniques of recording, challenges faced in the field, and ways of reading and interpreting text and image. These accounts are interesting and instructive

stories of innovation in the face of scientific conundrum.

Plant Biology for Cultural Heritage Giulia Caneva 2008 Brings together wide-ranging scientific contributions from those who have studied the biological degradation of cultural heritages. It tackles both general topics (mechanisms of biodeterioration; correlation between biodeterioration and environment; and destructive organisms) and specific ones (the problems presented by different materials, environments, climatic conditions, and geographic settings). The contributors also discuss ways to diagnose, prevent, and control deterioration.

Dragon's Jaw Stephen Coonts 2019-05-14 A riveting Vietnam War story--and one of the most dramatic in aviation history--told by a New York Times bestselling author and a prominent aviation historian Every war has its "bridge"--Old North Bridge at Concord, Burnside's Bridge at Antietam, the railway bridge over Burma's River Kwai, the bridge over Germany's Rhine River at Remagen, and the bridges over Korea's Toko Ri. In Vietnam it was the bridge at Thanh Hoa, called Dragon's Jaw. For seven long years hundreds of young US airmen flew sortie after sortie against North Vietnam's formidable and strategically important bridge, dodging a heavy concentration of anti-aircraft fire and enemy MiG planes. Many American airmen were shot down, killed, or captured and taken to the infamous "Hanoi Hilton" POW camp. But after each air attack, when the smoke cleared and the debris settled, the bridge stubbornly remained standing. For the North Vietnamese it became a symbol of their invincibility; for US war planners an obsession; for US airmen a testament to American mettle and valor. Using after-action reports, official records, and interviews with surviving pilots, as well as untapped Vietnamese sources, *Dragon's Jaw* chronicles American efforts to destroy the bridge, strike by bloody strike, putting readers into the cockpits, under fire. The story of the Dragon's Jaw is a story rich in bravery, courage, audacity, and sometimes luck, sometimes tragedy. The "bridge" story of Vietnam is an epic tale of war against a determined foe.

Management and Welfare of Farm Animals John Webster 2022 "The broad aim of this book, as in earlier editions, is to provide an introduction to the management and welfare of farm animals through the practice of good husbandry within the context of an efficient, sustainable agriculture. Successive chapters outline these principles and practices for the major farmed species within a range of production systems, both intensive and extensive. This chapter opens with a description of concepts in animal welfare that may be applied to any sentient farm animal, then progresses to general principles that may be applied to their management. These general principles are illustrated by specific examples relating to animal species and production systems (e.g. broiler chickens, dairy cows). For those of you who are new to the study of animal management and animal welfare, some of these examples may only make sense when you have read the chapter on the species to which they refer. I also suggest that, when you have read, learned and inwardly digested a chapter on a particular species, you might refer back to this opening chapter and consider how well (or not) current

management practices for that species meet the general criteria for good husbandry and welfare within the categories outlined here. The purpose of farming is to use the resources of the land to provide the people with food and other goods. For most of the history of agriculture and, even now, throughout most of the world, the role of the farmer has been straightforward: to produce food to meet the needs of the people. If they could produce it, we would buy it. Today, in developed, affluent, urbanized society, consumers have much greater freedom in their choice of food and their decisions will range beyond the direct elements of price and nutritive value to include issues such as provenance, animal welfare and environmental cost. An increasing number, ovo-lacto-vegetarians, reject meat. Vegans will not eat or wear anything of animal origin. To succeed, modern farmers must combine a knowledge and understanding of how to care for the life of their land with a shrewd awareness of the needs and wants of their consumers to obtain the best possible value from what they have to sell. Successful livestock farmers are those who also have the best understanding of the needs and wants of their animals"--

Health and Environmental Risk Analysis Joseph F. Louvar 1998 This is the first book to bring together comprehensive resources for understanding, eliminating and mitigating industrial risks, especially those associated with chemical production. A detailed understanding of risk analysis is essential in an era where governments and companies are increasingly aware of their health, safety and environmental responsibilities, yet resources are limited. This book covers all the fundamental concepts of risk analysis and ties them together with OSHA Process Safety Management and EPA Risk Management regulations. Using many examples and illustrations, it thoroughly reviews topics like: process descriptions, hazard identification, source models, fault tree analysis, consequence analysis, exposure assessment, and radiation risk assessment. There is also detailed coverage of the relationship between risk analysis and ISO 14000 standards. For: professional environmental safety, health and R&D professionals in government, communities, and chemical companies; or at storage and transportation facilities. Also for advanced students in risk analysis.

Coping with Biological Growth on Stone Heritage Objects Daniela Pinna 2017-05-18 *Coping with Biological Growth on Stone Heritage Objects: Methods, Products, Applications, and Perspectives* offers hands-on guidance for addressing the specific challenges involved in conserving historical monuments, sculptures, archaeological sites, and caves that have been attacked and colonized by micro- and macroorganisms. The volume provides many case studies of removal of biological growth with practical advice for making the right choices. It presents detailed and updated information related to biocides and to alternative substances, features that will be valuable to dealing with these challenges. The author's goal is to provide access to information and offer the conceptual framework needed to understand complex issues, so that the reader can comprehend the nature of conservation problems and formulate her/his own views. From bacteria to plants, biological agents pose serious risks to the preservation of cultural heritage. In an effort to save heritage objects, buildings, and sites, conservators' activities aim to arrest, mitigate, and

prevent the damages caused by bacteria, algae, fungi, lichens, plants, and birds. Although much has been learned about these problems, information is scattered across meeting proceedings and assorted journals that often are not available to restorers and conservators. This book fills the gap by providing a comprehensive selection and examination of international papers published in the last fifteen years, focusing on the appropriate methods, techniques, and products that are useful for the prevention and removal of micro- and macroorganisms that grow on artificial and natural stone works of art, including wall paintings. Results on new substances with antimicrobial properties and alternative methods for the control of biological growth are presented as well. The book also emphasizes issues on bioreceptivity of stones and the factors influencing biological growth and includes an outline of the various organisms able to develop on stones, a discussion on the bioprotection of stones by biofilms and lichens, a review of the main analytical techniques, and a section on bioremediation. This volume will be a valuable reference for cultural heritage conservators and restorers, scientists, and heritage-site staff involved in conservation and maintenance of buildings, archaeological sites, parks, and caves.

Stones and Quarries in Ancient Egypt Rosemarie Klemm 2008 An important study not only of the geological structure of Egypt and the mineral composition of its rocks, but also of ancient Egyptian stone quarries. Illustrated with almost 500 photographs and diagrams, microscopic sections and electronic scans, as well as colour photographs of all the types of stone discussed, the detailed descriptions of the quarries and numerous examples of quarrying and masonry techniques make this book an indispensable tool for the provenancing of museum exhibits. Originally published in German in 1993, this edition has been updated to take account of new research, and a new chapter on the building stones of the western oases has been added. Archaeologists, Egyptologists and travellers to Egypt will find a wealth of fascinating information on ancient quarry sites, working methods and transport in ancient Egypt, as well as an introduction to the geology of the Nile valley and the surrounding desert regions.

The Politics of Force Regina G. Lawrence 2000-11-06 When police brutality becomes front-page news, it triggers a sudden, intense interaction between the media, the public, and the police. Regina Lawrence ably demonstrates how these news events provide the raw materials for looking at underlying problems in American society. Journalists, policy makers, and the public use such stories to define a problematic situation, and this process of problem definition gives the media a crucial role in our public policy debates. Lawrence extensively analyzes more than 500 incidents of police use-of-force covered by the New York Times and the Los Angeles Times from 1985 to 1994, with additional analysis of

more recent incidents such as the shooting of Amadou Diallo in New York. The incidents include but are not limited to those defined as "police brutality." Lawrence reveals the structural and cultural forces that both shape the news and allow police to define most use-of-force incidents, which occur in far greater numbers than are reported, she says. Lawrence explores the dilemma of obtaining critical media perspectives on policing policies. She examines the factors that made the coverage of the Rodney King beating so significant, particularly after the incident was captured on video. At the same time, she shows how an extraordinary news event involving the police can become a vehicle for marginalized social groups to gain entrance into the media arena. In contrasting "event-driven" problem definition with the more thoroughly studied "institutionally driven" news stories, Lawrence's book fills a major gap in media studies. It also offers a broader understanding of the interplay between the criminal justice system and the media in today's world.

The Police and Violence Lawrence W. Sherman 1980 Articles in this volume discuss efforts by the police to reduce violence in society and the problem of the use of violence by and against the police. The introductory article notes that when police attempt to stop violence, they must often be violent themselves. One paper demonstrates the personal and institutional consequences of the moral dilemmas involved in police work; when police use 'dirty' means to achieve good ends they may lose their sense of moral proportion. Empirical evidence of violence against police is presented. For example, the first systematic analysis of the circumstances surrounding police killings is discussed, and the myth that many officers are killed in family fights is deflated. The practice of arming off-duty police officers is criticized by another contributor as harmful to both police officers and citizens. Ways in which police behavior might be changed to reduce injuries to citizens are suggested in two papers which show how prior decisions can constrain the options an officer has by the time a confrontation develops. Also discussed are police shootings at minorities in Los Angeles. Many contributors point to the need for more research, especially concerning violence against the police. Scarcity of basic data accounts for lack of practical solutions to the problems of violence and police. Footnotes, case studies, and statistical data are included.

Death and Burial in Ancient Egypt Salima Ikram 2015 Death, burial, and the afterlife were as important to the ancient Egyptians as how they lived. This well-illustrated book explores all aspects of death in ancient Egypt, including beliefs of the afterlife, mummification, the protection of the body, tombs and their construction and decoration, funerary goods, and the funeral itself. It also addresses the relationship between the living and the dead, and the magico-religious interaction of these two in ancient Egyptian culture. Salima Ikram's own experience with experimental mummification and funerary archaeology lends the book many completely original and provocative insights. In addition, a full survey of current development in the field makes this a unique book that combines all aspects of death and burial in ancient Egypt into one volume.

A History of the Roman People Allen Mason Ward 2010 The Fifth Edition of A History of the Roman People continues to provide a comprehensive analytical survey of Roman history from its prehistoric roots in Italy and the wider Mediterranean world to the dissolution of the Roman Empire in Late Antiquity in A.D. 600. Clearly organized and highly readable, the text's narrative of major political and military events provides a chronological and conceptual framework for the social, economic, and cultural developments of the periods covered. Major topics are treated separately so that students can easily grasp key concepts and ideas.

Ancient Mesopotamian Materials and Industries Peter Roger Stuart Moorey 1999 This is the first systematic attempt to survey in detail the archaeological evidence for the crafts and craftsmanship of the Sumerians, Babylonians, and Assyrians in ancient Mesopotamia, covering the period ca. 8000-300 B.C.E. As creators of some of the earliest farming and urban communities known to us, these people were among the first pioneers of many crafts and skills that remain fundamental to modern ways of life. Many of the raw materials for crafts had to be imported from outside the river valley of the Tigris and Euphrates, providing an unusually sensitive indicator of the commercial and cultural contacts of Mesopotamia. In this book, Dr. Moorey reviews briefly the textual evidence, and then goes on to examine in detail the material evidence for a wide range of crafts using stones, both common and ornamental, animal products--from hippopotamus ivory to ostrich egg-shells--ceramics, glazed materials and glass, metals, and building materials. With a comprehensive bibliography, this will be a key work of reference for archaeologists and those interested in the early history of crafts and technology, as well as for specialist historians of the ancient Near East.

Understanding Police Use of Force Geoffrey P. Alpert 2004-08-16 Publisher Description

Policing Protest Donatella Della Porta The first international examination of how police respond to political protests. The way in which police handle political demonstrations is always potentially controversial. In contemporary democracies, police departments have two different, often conflicting aims: keeping the peace and defending citizens' right to protest. This collection, the only resource to examine police interventions cross-nationally, analyzes a wide array of policing styles. Focusing on Italy, France, Germany, Great Britain, Switzerland, Spain, the United States, and South Africa, the contributors look at cultures and political power to examine the methods and the consequences of policing protest.

Urban Fuel Poverty Kristian Fabbri 2019-07-04 *Urban Fuel Poverty* describes key approaches to defining and alleviating fuel poverty in cities using a multidisciplinary perspective and multiple case studies. It provides empirical knowledge on the levels and intensities of energy poverty in urban areas, along with new theoretical perspectives in conceptualizing the multidimensionality of energy poverty, with special focus given to the urban environment. Chapters discuss what energy poverty is in terms of taxonomy, stakeholders and affected parties, addressing the role of the economy and energy bills, the role of

climate and city factors, the role of buildings, and the health and psychological impact on fuel poverty. The book addresses how to measure energy poverty, how to map it, and how to draw conclusions based on illness and social indicators. Finally, it explores measures to 'fight' fuel poverty, including policy and governance actions, building efficiency improvements and city planning. Bridges interdisciplinary divides between policy and economy, cities and buildings, and health and society Addresses the physical performance of urban fuel poverty and their effect on thermal comfort and human health Provides strategies and policies to mitigate energy and fuel poverty

The Policing Web Jean-Paul Brodeur 2010-09-30 Nearly all research devoted to policing focuses on public uniformed police and their legal use of force. An overwhelming amount of this work draws on evidence from Anglo-American police forces. These twin emphases have led to a limited view. Agencies such as criminal investigation units, intelligence services, private security companies, and military policing organizations have almost entirely escaped scholarly attention. In *The Policing Web*, Jean-Paul Brodeur looks at policing as a whole. He illuminates its full diversity, showing how it extends far beyond the confines of public police working in uniform and visible to all. Brodeur considers military policing, both when it complements the values of democracy and when it does not. He also discusses criminal individuals acting as police informants, and criminal organizations enforcing their own rules in urban zones deserted by the police. Brodeur argues that the diverse strands of the policing web are united by a common definition that emphasizes the license granted to policing agencies-legally or with impunity- to use means otherwise forbidden to the rest of the population. Employing an international and comparative approach, Brodeur establishes a comprehensive model that links all the components of policing. The policing web, however, is not a neat and well-integrated structure. There is not just one policing web. There are several, depending on the country, police history and culture, and the various public images of policing. These often overlooked factors are essential components of the context of policing. Wide-ranging and authoritative, *The Policing Web* expands the very idea of what policing is and how it works, and presents a novel yet fundamental understanding of law enforcement.
