**Grid Optimal Integration of Electric Vehicles: Examples with Matlab Implementation** Andrés Ovalle 2018-02-04 This book is a compilation of recent research on distributed optimization algorithms for the integral load management of plug-in electric vehicle (PEV) fleets and their potential services to the electricity system. It also includes detailed developed Matlab scripts. These algorithms can be implemented and extended to diverse applications where energy management is required (smart buildings, railways systems, task sharing in micro-grids, etc.). The proposed methodologies optimally manage PEV fleets' charge and discharge schedules by applying classical optimization, game theory, and evolutionary game theory techniques. Taking owner's requirements into consideration, these approaches provide services like load shifting, load balancing among phases of the system, reactive power supply, and task sharing among PEVs. The book is intended for use in graduate optimization and energy management courses, and readers are encouraged to test and adapt the scripts to their specific applications.

*Popular Culture, Political Economy and the Death of Feminism* Penny Griffin 2015-06-05 While some have argued that we live in a 'postfeminist' era that renders feminism irrelevant to people's contemporary lives this book takes 'feminism', the source of eternal debate, contestation and ambivalence, and situates the term within the popular, cultural practices of everyday life. It explores the intimate connections between the politics of feminism and the representational practices of contemporary popular culture, examining how feminism is 'made sensible' through visual imagery and popular culture

representations. It investigates how popular culture is produced, represented and consumed to reproduce the conditions in which feminism is valued or dismissed, and asks whether antifeminism exists in commodity form and is commercially viable. Written in an accessible style and analysing a broad range of popular culture artefacts (including commercial advertising, printed and digital news-related journalism and commentary, music, film, television programming, websites and social media), this book will be of use to students, researchers and practitioners of International Relations, International Political Economy and gender, cultural and media studies.

Corpus-Based Analysis of Ideological Bias Anna Islentyeva 2020-10-27 Corpus-Based Analysis of Ideological Bias presents research combining a range of corpus-linguistic techniques which are employed to analyse how migration discourse is (re)constructed in the contemporary British press. Two specialised corpora containing 1,000 news reports, editorials, and opinion pieces from five major national British newspapers were collected and annotated for this research. The event separating these two corpora is the 2016 referendum on Britain's membership of the European Union (EU). In its analysis, this book: employs both quantitative and qualitative analytical methods, with four case studies offering a broad perspective on how the topical socio-political issues of migration and asylum seeking are represented by left- and right-wing British newspapers; explores how newspapers reveal their political orientation and promote their political agenda by employing specific linguistic patterns and discursive strategies - in this case, in the representation of the key social actors within migration discourse; provides case studies that place a particular focus on the discourses surrounding European migrants and migration within the EU, which proved to be a very popular topic in the British press both before and after the 2016 EU membership referendum; and offers a comparative corpus analysis that seeks to ascertain whether media discourse regarding EU migration has changed in the wake of the referendum. This book is a useful source not only for students of English, linguistics, and media studies, but also for researchers in the fields of applied corpus linguistics, critical discourse studies, contemporary media analysis, and metaphor research.

*The Inclusive Economy* Michael D. Tanner 2018-12-04 *The Inclusive Economy: How to Bring Wealth to America's Poor* energetically challenges the conventional wisdom of both the right and the left that underlies much of the contemporary debate over poverty and welfare policy. Author and national public policy expert Michael Tanner takes to task conservative critiques of a "culture of poverty" for their failure to account for the structural circumstances in which the poor live. In addition, he criticizes liberal calls for fighting poverty primarily through greater redistribution of wealth and new government programs. Rather than engaging in yet another debate over which government programs should be increased or decreased by billions of dollars, Tanner calls for an end to policies that have continued to push people into poverty. Combining social justice with limited government, his plan includes reforming the criminal justice system and curtailing the War on Drugs, bringing down the cost of housing, reforming education to give more control and choice to parents, and making it easier to bank, save, borrow, and invest. The comprehensive evidence provided in *The Inclusive Economy* is overwhelming: economic growth lifts more people out of poverty than any achievable amount of redistribution does. As Tanner notes, "we need a new debate, one that moves beyond our current approach to fighting poverty to focus on what works rather than on noble sentiments or good intentions." *The Inclusive Economy* is a major step forward in that debate.

Postal and Delivery Innovation in the Digital Economy Michael A. Crew 2014-12-12 Worldwide, postal and delivery economics is the subject of considerable interest. The postal industry's business model is in drastic need of change. Notably, the European Commission and member states are still wrestling with the problems of implementing liberalization of entry into postal markets, addressing digital competition, and maintaining the universal service obligation. In the United States, the Postal Accountability and

Enhancement Act of 2006 has, perhaps, exacerbated some of the problems faced by the United States Postal Service (USPS). Currently, the USPS has serious financial problems because of difficulties it faces in making changes and the failure of the Act to address problems that have been long-standing. Electronic competition is severe and affects post offices (POs) worldwide, which have been slow to address the threat. This book addresses this new reality and includes discussion of how POs may attempt to reinvent themselves. Parcels and packets will play a major role in developing new business models for postal operators. This book is of use not only to students and researchers interested in the field, but also to postal operators, consulting firms, utilities, regulatory commissions, Federal Government Departments and agencies of the European Union and other countries.

**The Political Economy of International Law** Alberta Fabbricotti 2016-06-24 Set in the context of growing interdisciplinarity in legal research, *The Political Economy of International Law: A European Perspective* provides a much-needed systematic and coherent review of the interactions between Political Economy and International Law. The book reflects the need felt by international lawyers to open their traditional frontiers to insights from other disciplines - and political economy in particular. The methodological approach of the book is to take the traditional list of topics for a general treatise of international law, and to systematically incorporate insights from political economy to each.

*Transitioning to a Green Economy* Nadine Smith 2014-03-30 While the term 'green economy' has been widely used at the international level, very little information exists about what the concept looks like in practice. What are the policies required? What are the challenges of implementation at national level? This book contains case studies from eight small states who have committed publicly to greening their economies: Botswana, Grenada, Guyana, Jamaica, Mauritius, Nauru, Samoa and Seychelles. It provides insights into the success of various initiatives and highlights how small states themselves are making practical progress on a green economy approach.

**Applied Approaches to Societal Institutions and Economics** Tohru Naito 2017-09-21 This book gives readers the theoretical and empirical methods to analyze applied economics. They are institutional economics, information economics, environmental economics, international economics, financial economics, industrial organization, public economics, law and economics, and spatial economics. Because the chapters of this book deal with current topics in these categories, they are relevant not only to researchers and graduate students but also to policy makers and entrepreneurs. As there is uncertainty about the global economy, it is necessary to consider optimal, efficient behavior to survive in the confused world. The book is organized in three parts. Part 1 deals with institutional economics, information economics, and related topics, approached through game theory. Part 2 focuses on environmental economics, international economics, and financial economics, through a microeconomic or econometric approach. Finally, Part 3 concentrates on public economics, social security, and related fields, through microeconomics or macroeconomics.

**The Consequences of Global Disasters** Anthony Elliott 2016-04-14 Disasters of the 21st century differ substantially from other kinds of hazards that previous societies have had to cope with because of the twin forces of globalization and the communications revolution. But what makes today's disasters—industrial, technological, environmental, and socio-cultural—so different in scope and impact? What are the possible disasters of the future? And how can we, as collective humanity, best manage and respond to the globalization of disasters? *The Consequences of Global Disasters* makes a distinctive

contribution to the ever-expanding field of disaster research by developing a multi-contextual, multi-disciplinary and multi-methodological approach to the social analysis of disasters. Anthony Elliott and Eric L. Hsu have brought together a highly distinguished group of international contributors to focus on how people react to the unsettling effects of disasters, which come in a multitude of forms. Numerous contributors concentrate on the cultural, political and psychological ramifications of the 2011 Great East Japan earthquake and tsunami, but disasters in other contexts, such as Australia, China and Haiti, are considered as well. By offering unique empirical, methodological and theoretical insights, *The Consequences of Global Disasters* sets an agenda for future developments in the field of disaster research and will be a key resource for students and scholars working in social science disciplines such as sociology, cultural studies, international relations, psycho-social studies, social work, Japanese studies and social theory.

*The SAGE Encyclopedia of Economics and Society* Frederick F. Wherry 2015-09-01 Economics is the nexus and engine that runs society, affecting societal well-being, raising standards of living when economies prosper or lowering citizens through class structures when economies perform poorly. Our society only has to witness the booms and busts of the past decade to see how economics profoundly affects the cores of societies around the world. From a household budget to international trade, economics ranges from the micro- to the macro-level. It relates to a breadth of social science disciplines that help describe the content of the proposed encyclopedia, which will explicitly approach economics through varied disciplinary lenses. Although there are encyclopedias of covering economics (especially classic economic theory and history), the SAGE Encyclopedia of Economics and Society emphasizes the contemporary world, contemporary issues, and society. Features: 4 volumes with approximately 800 signed articles ranging from 1,000 to 5,000 words each are presented in a choice of print or electronic editions Organized A-to-Z with a thematic Reader's Guide in the front matter groups related entries Articles conclude with References & Future Readings to guide students to the next step on their research journeys Cross-references between and among articles combine with a thorough Index and the Reader's Guide to enhance search-and-browse in the electronic version Pedagogical elements include a Chronology of Economics and Society, Resource Guide, and Glossary This academic, multi-author reference work will serve as a general, non-technical resource for students and researchers within social science programs who seek to better understand economics through a contemporary lens.

**War by Other Means** Robert D. Blackwill 2016-04-11 Nations carry out geopolitical combat through economic means. Yet America often reaches for the gun over the purse to advance its interests abroad. Robert Blackwill and Jennifer Harris show that if U.S. policies are left uncorrected, the price in blood and treasure will only grow. Geoeconomic warfare requires a new vision of U.S. statecraft.

*Economics* Richard G. Lipsey 2015 "Written to engage you with real world issues and questions in economics, this book provides up-to-date coverage of the financial crisis and its many subsequent implications, which are vital to understanding today's economic climate. Case studies help you to understand how economics works in practice, and to think critically"--Back cover.

*The Russian Economy under Putin* Torbjörn Becker 2018-10-03 This book presents a comprehensive view of the state of the Russian economy under President Putin. It considers the extent of Russia's integration in the world economy, where Russia's exports of oil and gas are a key factor, discusses Russia's internal challenges, including changing demographics, declining government revenue, the need to counter over-reliance on the oil and gas sector and the consequences of high military spending, and assesses the prospects for economic reform, highlighting especially the power struggles between different vested interests. Overall, the book provides a basis for understanding what has been going on in the Russian

economy under President Putin and what the future may look like given the external environment, internal challenges and reform processes.

**The Political Economy of Low Carbon Resilient Development** Susannah Fisher 2016-10-04 Over the last decade, policies and financing decisions aiming to support low carbon resilient development within the least developed countries have been implemented across several regions. Some governments are steered by international frameworks, such as the UN Framework Convention on Climate Change (UNFCCC), while others take their own approach to planning and implementing climate resilient actions. Within these diverse approaches however, there are unspoken assumptions and normative assessments of what the solutions to climate change are, who the most appropriate actors are and who should benefit from these actions. This book examines the political economy dynamics or the underlying values, knowledge, discourses, resources and power relationships behind decisions that support low carbon resilient development in the least developed countries. While much has been written on the politics of climate change, this book will focus on the political economy of national planning and the ways in which the least developed countries are moving from climate resilient planning to implementation. The book will use empirical evidence of low carbon resilient development planning in four countries: Bangladesh, Ethiopia, Rwanda and Nepal. Different approaches to low carbon resilience are critically analysed based on detailed analysis of key policy areas. This book will be of great interest to policy makers, practitioners' students and scholars of climate change and sustainable development.

Credit, Consumers and the Law Karen Fairweather 2016-10-14 Consumer law, particularly consumer credit law, is characterised by increasingly complex regulation in Western economies. Reacting to the Global Financial Crisis, governments in the UK, the EU, Australia, New Zealand and the United States have adopted new laws dealing with consumer credit, responsible lending, consumer guarantees and unfair contracts. Drawing together authors from all of these jurisdictions, this book analyses and evaluates these initiatives, and makes predictions as to their likely success and possible flaws.

**European Perspectives on Behavioural Law and Economics** Klaus Mathis 2015-02-09 This anthology highlights the theoretical foundations as well as the various applications of Behavioural Law and Economics in European legal culture. By the same token, it fosters the dialogue between European and American Law and Economics scholars. The traditional neo-classical microeconomic theory explains human behaviour by using Rational Choice. According to this model, people tend to maximize the difference between expected utility and cost (“expected utility theory”). This theory includes three assumptions: (1) unbounded rationality, (2) unbounded self-interest, and (3) unbounded willpower. Behavioural Economics questions these assumptions and endeavours to render economic analysis more realistic by underpinning it with psychological insights. In recent years, the influence of Behavioural Economics on the Economic Analysis of Law has gained momentum. Behavioural Law and Economics generates a better theoretical understanding of legal phenomena and offers a multitude of applications in legislation and legal adjudication. This volume is testament to the growing and thriving Law and Economics movement in Europe. The European Law and Economics community has steadily grown and the yearly Law and Economics Conference at the law faculty of the University of Lucerne has successfully become a guiding star in the vast sky of Law and Economics.

**Fifty Years at the US Environmental Protection Agency** A. James Barnes 2021-02-15 In conjunction with the 50th anniversary of the creation of the Environmental Protection Agency, this book brings together leading scholars and EPA veterans to provide a comprehensive assessment of the agency’s key decisions and actions in the various areas of its responsibility. Themes across all chapters include the role of rulemaking, negotiation/compromise, partisan polarization, judicial impacts, relations with the White House and Congress, public opinion, interest group pressures, environmental enforcement, environmental justice, risk assessment, and interagency conflict. As no other book on the market currently discusses EPA with this focus or scope, the authors have set out to provide a comprehensive analysis of the agency’s rich 50-year history for academics, students, professional, and the environmental community.

*The Parent Trap* Nate G. Hilger 2022-04-26 How parents have been set up to fail, and why helping them succeed is the key to achieving a fair and prosperous society. Few people realize that raising children is the single largest industry in the United States. Yet this vital work receives little political support, and its primary workers—parents—labor in isolation. If they ask for help, they are made to feel inadequate; there is no centralized organization to represent their interests; and there is virtually nothing spent on research and development to help them achieve their goals. It’s almost as if parents are set up to fail—and the result is lost opportunities that limit children’s success and make us all worse off. In *The Parent Trap*, Nate Hilger combines cutting-edge social science research, revealing historical case studies, and on-the-ground investigation to recast parenting as the hidden crucible of inequality. Parents are expected not only to care for their children but to help them develop the skills they will need to thrive in today’s socioeconomic reality—but most parents, including even the most caring parents on the planet, are not

trained in skill development and lack the resources to get help. How do we fix this? The solution, Hilger argues, is to ask less of parents, not more. America should consider child development a public investment with a monumental payoff. We need a program like Medicare—call it Familycare—to drive this investment. To make it happen, parents need to organize to wield their political power on behalf of children—who will always be the largest bloc of disenfranchised people in this country. The Parent Trap exposes the true costs of our society's unrealistic expectations around parenting and lays out a profoundly hopeful blueprint for reform.

**The Political Economy of Food and Finance** Ted P. Schmidt 2015-12-14 The financialization, globalization and industrialization of our food systems make it increasingly difficult to access quality fresh food. In fact, the industrialized global food system is creating products that are less food-like, engendering growing questions about the health and safety of our food supply. In addition, the bio-engineering of food commodities is another factor influencing the growth of industrial farming for an increasingly homogenized, globalized market. This book describes the financialization process in commodity futures markets which transformed commodities into an asset class. Incorporated into the portfolio decisions of investors, commodity prices now behave like all asset prices, becoming more volatile and subject to periodic bubbles. As commodity prices were driven higher in the 2000s, farmland became more valuable, setting off a global land grab by investors, nations, and corporations. More recently, under the financialization food regime, slow growth and low returns encouraged merger activity driven by private equity firms, with food industry corporations as prime targets, leading to increased industry concentration. With government policy focused on supporting corporate interests, there has been a global reaction to the current food system. The food sovereignty movement is taking on the interests behind the global land grab, and the regional food movement in cities across the U.S. is hitting corporations at the bottom line. Food corporations are listening. Is the food movement winning? This book is of interest to those who study political economy, financialization and agriculture and related studies, as well as food systems and commodity future markets.

**Managing the City Economy** Le-Yin Zhang 2015-03-24 In a world increasingly organised as networks of cities, this book offers the first full-length treatment of the subject of managing the city economy. It explores key challenges and strategies, particularly in developing countries, where developmental deficits are greatest and almost all urban growth up to 2050 will take place. Adopting a practitioner's perspective, theoretically grounded and international in scope, this book is unique in its focus and endeavours to connect theory with practice. Through an interdisciplinary and strategic approach, this book explores the challenges and options in managing the contemporary city economy. It aims to illustrate the extent to which appropriate policy interventions in the city economy could offer effective solutions to some of the most difficult social and environmental challenges facing cities. The book comprises five main parts. Part I sets the scene and examines contemporary processes that affect cities and explains the challenges they pose for city managers. Part II presents a selection of conceptual frameworks commonly used in urban economic analysis. Part III examines the management of sectoral growth, covering manufacturing, exports of services, transport and logistics, and real estate. Part IV addresses urban poverty, low-carbon transition and the informal economy. Part V focuses on laying the foundation for long-term city development, exploring the roles of city development strategies, municipal finance, investment in people and appropriate infrastructure. This book is designed for graduate courses in urban economic development, urban planning, urban policy and public administration, and for professionals who are involved in the management of city economies or/and conducting research, consultancy or policy advocacy for cities. Through critical review of relevant debates and a dozen case studies this book will equip city managers with the knowledge required to strengthen the performance of their city economy while delivering authentic and sustainable development.

Competition Law in the CARICOM Single Market and Economy Alina Kaczorowska-Ireland 2014-09-15 Competition Law in the CARICOM Single Market and Economy provides a comprehensive introduction to and overview of this emerging area of law, discussing both the current context and potential directions for future development. The book provides an account of major topics in the law, including the economics of competition law; enterprise; enforcement; regulation; and obligations of member states. It traces the progression of the law from the 2006 Revised Treaty of Chaguaramas, charting the main developments such as the establishment of CARICOM Competition Commission (CCC), and examining the emerging case law in this important and fast-growing area. Offering the first major exploration of Caribbean Competition law, this text will be an essential resource for lawyers, businesspersons, and students of the law in the Caribbean.

**Chinese Students in UK Further Education** Rosemary A. Reynolds 2017-12-15 Chinese students in the UK have been increasing in number for many years, yet competition from other Western educators and increasing investment in China's own education system has led to concern that UK institutions may

soon see a decline in their market share. Dr. Reynolds addresses this issue in *Chinese Students in UK Further Education* by attempting to understand students' experiences from their perspective. Beginning with an exploration of why these students choose to come and study in the UK, and why they are coming at younger ages, the book goes on to discuss topics such as risk, technology and diversity, in order to understand which factors have the greatest influence on where they choose to study and whether they choose to remain at an institution. Drawing on data from two different education institutions, providers of GCSE A-level programmes for students aged 16–18 years, Dr. Reynolds attempts to understand what these students experience during their studies, how they manage new social relationships, and whether, upon course completion, they achieved the results they desired at the outset. Moreover, the book aims to ascertain whether the students feel, in hindsight, that the decision to risk investing in UK further education was right and what they might communicate about UK study to contacts in China and elsewhere. The book examines what further education institutions do well and where they might improve, to help develop Chinese students' educational experiences. As such, it will be essential reading for academics, researchers and postgraduates in the fields of further education, sociology of education, international and intercultural education and mobility studies.

**Pharmaceutical Industry and Public Policy in Post-reform India** Reji K. Joseph 2015-07-24 This book examines the impact of economic reforms in India on the pharmaceutical industry and access to medicines. It traces the changing production and trade pattern of the industry, research and development (R&D) preferences and strategies of Indian pharmaceutical firms, patent system alongside pricing policy measures and their shortcomings. It also analyses the public health financing system in India driven largely by out-of-pocket expenditure — about 60 per cent — and characterised by very high share of medicines in total health expenditure. A masterful insight into a topical area, the work will be indispensable to those working on pharmaceutical industry and public policy. It will be of interest to researchers, scholars, students, and policy-makers of economics, industrial policy, public policy, intellectual property rights and health financing.

Home economics Sacha Hepburn 2022-08-16 Domestic service has long been one of the largest forms of urban employment across southern Africa. Home economics provides the first comprehensive history of this essential sector in the decades following independence and the end of apartheid. Focusing on Lusaka and drawing wider comparisons, the book traces how Black workers and employers adapted existing models of domestic service as part of broader responses to changing gendered employment patterns, economic decline, and endemic poverty. It reveals how kin-based domestic service gradually displaced wage labour and how women and girl workers came to dominate kin-based and waged domestic service, with profound consequences for labour regulation and worker organising. Theoretically innovative and empirically rich, the book provides essential insights into debates about gender, work, and urban economies that are critical to understanding southern Africa's post-colonial and post-apartheid history.

*How to Make Better Decisions. Examples from Exploration* Bernhard Seubert 2021-11-26 Scientific Essay from the year 2014 in the subject Psychology - Industrial and organizational psychology, grade: A, , language: English, abstract: Good decision-making creates value for a company. The decision to drill in the right place (or not) has strong economic repercussions. Moreover, the human approach to decision-making can be flawed. Many of the common flaws in decision-making are related to heuristic factors; that is, by human ways of thinking and drawing conclusions. These factors can negatively impact the outcomes of an exploration program. This paper gives examples of cases in which geoscientific reasoning can lead to pitfalls, and explores why this is so. The paper then discusses the merits of the multiple working hypotheses (MWH) concept as an aid to harnessing seemingly contradictory data relating to several, often mutually exclusive, interpretations or scenarios. A simple method using a spreadsheet and

decision-tree analysis is proposed to quantify the outcomes of multiple scenarios. The method is illustrated by a subsurface example in which two possible interpretations, reef versus volcano, are considered. An outlook of Bayesian statistics and other methods is included.

**Media Ownership and Control** Suzanne Rab 2014-12-01 Competition and diversity in media and communications are fundamental to a healthy economy and democracy. In India and internationally there is no consensus on the exact manner and scope of interventions that are appropriate to protect competition and pluralism in media markets. Many emerging economies including India are seeking to adopt their own regulation in this area taking their lead from the UK. The issues have been brought into sharp focus in India in recent years. First, the enactment and implementation of modern - but sector neutral - competition law under the Competition Act 2002 has caused a step change in regulation towards an economics and effects-based approach. Second, in 2013 the India telecoms regulator launched controversial reform proposals to apply a media-specific approach to ownership regulation. As academics, lawyers, businesses, regulators and policy-makers in India cast a glance at the international experience, this book examines the legal, economic and policy issues relating to regulation of ownership and control of media markets. The focus of comparative assessment is on examples from the European Union, EU Member States and the US.
