Researching Children's Experiences Melissa Freeman 2009 This accessible book presents approaches to planning, carrying out, and analyzing research projects with children and youth from a social constructivist perspective. Rich, contextualized examples illustrate how to elicit and understand the lived experiences of diverse young people. Data-collection methods discussed in depth include drawing, photography, the Internet, games, interviewing, focus groups, journaling, and observation. Also covered are strategies for fostering the active contributions of children in the research process; navigating consent and ethical issues; enlisting the support of parents, school personnel, and other gatekeepers; and interpreting data. Throughout, the authors emphasize the need to attend to the social setting in which research with children is done. End-of-chapter questions and exercises encourage readers to reflect on taken-for-granted conceptions of children and childhood and to try out the book's ideas in their own research projects.

**Created to Learn** William Yount 2010-08-15 This revised and expanded second edition of Created to Learn—an ECPA Gold Medallion Award finalist—shows teachers how to organize and tailor classroom instruction to fit the learning styles of their students. In a real sense, author William R. Yount takes the theories of teaching and learning and brings them to life inside the classroom. Additional content in this updated edition includes: • More information on new research into learning theories, including discoveries in the field of neuroscience that provide far more detail about brain function. • New chapters on Constructivism and brain-based learning. • Updated research from Yount's teaching experiences in other countries. • Full rewrite of original text, condensing material that has moved into other books, removing data found to be less helpful, and adding research that provides support for evolving ideas about cognitive and humanistic learning theory systems, designing

instructional objectives, and the revolution in brain science.

**Experimental Psychology** Anne Myers 2011-04-14 Focusing on experimental methods, authors Anne Myers and Christine Hansen lead students step by step through the entire research process, from generating testable hypotheses to writing the research report. The major sections of the book parallel the major sections of a research report (Introduction, Method, Results, and Discussion), giving students the skills they'll need to design and conduct an experiment, analyze and interpret the research findings, and report those findings. Although the main focus is on experimentation, alternative approaches are discussed as important complements. Educational Psychology Robert E. Slavin 2013-07-26 From renowned educational psychologist, Robert Slavin, the Tenth Edition of this popular text translates theory into practices that teachers can use in their classrooms with deeper inquiry into the concept of intentionality and a thorough integration of standards. This new edition highlights the most current issues and emerging trends in the field of educational psychology, while continuing to have in-depth, practical coverage with a focus on the intentional teacher. An intentional teacher, according to Slavin, is one who constantly reflects on his or her practice and makes instructional decisions based on a clear conception of how these practices affect students. To help readers become intentional teachers, the author offers a set of questions to guide them and models best practices through classroom examples.

**Intercourse** Andrea Dworkin 2009-09-17 Intercourse is a book that moves through the sexed world of dominance and submission. It moves in descending circles, not in a straight line, and as in a vortex each spiral goes down deeper. Its formal model is Dante's Inferno; its lyrical debt is to Rimbaud; the equality it envisions is rooted in the dreams of women, silent generations, pioneer voices, lone rebels, and masses who agitated, demanded, cried out, broke laws, and even begged. The begging was a substitute for retaliatory violence: doing bodily harm back to those who use or injure you. I want women to be done with begging. The public censure of women as if we are rabid because we speak without apology about the world in which we live is a strategy of threat that usually works. Men often react to women's words - speaking and writing - as if they were acts of violence; sometimes men react to women's words with violence. So we lower our voices. Women whisper. Women apologize. Women shut up. Women trivialize what we know. Women shrink. Women pull back. Most women have experienced enough dominance from men - control, violence, insult, contempt - that no threat seems empty. Intercourse does not say, forgive me and love me. It does not say, I forgive you, I love you. For a woman writer to thrive (or, arguably, to survive) in these current hard times, forgiveness and love must be subtext. No. I say no. Intercourse is search and assertion, passion and fury; and its form - no less than its content - deserves critical scrutiny and respect.---- PREFACE

*The Anti-Education Era* James Paul Gee 2013-01-08 One of the first champions of the positive effects of gaming reveals the dark side of today's digital and social media Today's schools are eager to use the latest technology in the classroom, but rather than improving learning, the new e-media can just as easily narrow students' horizons. Education innovator James Paul Gee first documented the educational benefits of gaming a decade ago in his classic *What Video Games Have to Teach Us About Learning and Literacy*. Now, with digital and social media at the center of modern life, he issues an important warning that groundbreaking new technologies, far from revolutionizing schooling, can stymie the next generation's ability to resolve deep global challenges. The solution-and perhaps our children's future-lies in what Gee calls synchronized intelligence, a way of organizing people and their digital tools to solve problems, produce knowledge, and allow people to count and contribute. Gee explores important strategies and tools for today's parents, educators, and policy makers, including virtual worlds, artificial tutors, and ways to create collective intelligence where everyday people can solve hard problems. By harnessing the power of human creativity with interactional and technological sophistication we can finally overcome the limitations of today's failing educational system and solve problems in our high-risk global world. *The Anti-Education Era* is a powerful and important call to reshape digital learning, engage children in a meaningful educational experience, and bridge inequality.

Understanding and Teaching the Intuitive Mind Bruce Torff 2001-01-01 The intuitive mind is a powerful force in the classroom and often an undetected one. Intuitive conceptions--knowledge or knowledge-structures that individuals acquire and use largely without conscious reflection or explicit instruction--sometimes work to facilitate learning in the classroom and other contexts. But learning may also be impeded by intuitive conceptions, and they can be difficult to dislodge as needed. The literatures in psychology and education include a large and diverse body of theory and research on intuitive conceptions, but this work is limited in some respects. This volume contributes in four ways to overcome these limitations. *Understanding and Teaching the Intuitive Mind: Student and Teacher Learning*: \* pulls together diverse theoretical and methodological approaches to the origin, structure, function, and development of intuitive conceptions; \* explores a diversity of academic disciplines--paying equal attention not only to mathematics and science, the fields in which intuitive concepts have been studied most extensively, but also to the social sciences, arts, and humanities; \* explicitly links theory and research to educational implications and classroom applications; and \* focuses not only on students' intuitive conceptions but also on teachers' intuitive beliefs about learning and teaching. Although the viewpoints of the contributors are diverse, they share the belief that educational practices have much to gain by systematic studies of the intuitive learner and teacher. This volume offers state-of-the-art, research-based information and support for psychologists, teacher educators, educational administrators, teachers, prospective teachers, and others who seek to develop educational practices that are cognizant of (and responsive to) the intuitive conceptions of students and teachers.

**Case Studies on Diversity and Social Justice Education** Paul C. Gorski 2013-11-07 Case Studies on Diversity and Social Justice Education offers pre- and in-service educators an opportunity to analyze and reflect upon a variety of realistic case studies related to educational equity and social justice. Each case, written in an engaging, narrative style, presents a complex but common classroom scenario in which an inequity or injustice is in play. These cases allow educators to practice the process of considering a range of contextual factors, checking their own biases, and making immediate- and longer-term decisions about how to create and sustain equitable learning environments for all students. The book begins with a seven-point process for examining case studies. Largely lacking from existing case study collections, this framework guides readers through the process of identifying, examining, reflecting on, and taking concrete steps to resolve challenges related to diversity and equity in schools. The cases themselves present everyday examples of the ways in which racism, sexism, homophobia and heterosexism, class inequities, language bias, religious-based oppression, and other equity and diversity concerns affect students, teachers, families, and other members of our school communities. They involve classroom issues that are relevant to all grade levels and all content areas, allowing significant flexibility in how and with whom they are used. Although organized topically, the intersection of these issues are stressed throughout the cases, reflecting the multi-faceted way they play out in real life. All cases conclude with a series of questions to guide discussion and a section of facilitator notes, called points for consideration. This unique feature provides valuable insight for understanding the complexities of each case.

**Approaches to Teaching, 5th Edition** Gary D. Fenstermacher 2015-04-18 This popular text continues using the format of the three approaches—The Executive, The Facilitator, and The Liberationist. For the Fifth Edition, the authors add four new case studies: “Scripted Teaching,” “Accountability and Merit,” “What Is the Value of Caring Relationships?” and “School Funding.” Using these and other realistic case studies, they explore the strengths and weaknesses of each approach so that teachers can critically assess their own philosophical positions on teaching. Teachers are urged to ask themselves such questions as: What is the main goal of teaching? What is the most important purpose of education? What do I expect my students to eventually become? Is the way I structure my teaching influenced by how I view my role and goals? This updated edition also adds a new section called “Topics and Resources” to encourage further inquiry into teaching. *Approaches to Teaching* is one of the five books in the highly regarded Teachers College Press THINKING ABOUT EDUCATION SERIES, now in its Fifth Edition. All of the books in this series are designed to help pre- and in-service teachers bridge the gap between theory and practice. Gary D Fenstermacher is Professor of Education at the University of Michigan, Ann Arbor. Jonas F. Soltis is William Heard Kilpatrick Professor Emeritus of Philosophy and Education at Teachers College, Columbia University. Matthew N Sanger is Assistant Professor of Educational Foundations at Idaho State University. "

In addition, if a topic is introduced, it is presented in some depth. . . .
