Time in Languages, Languages in Time Anna Čermáková 2021-09-17 This volume comprises a collection of contrastive studies on language and time. Languages represented include Czech, French, German, Mandarin, Norwegian and Swedish, all of which are contrasted with English. While the amount of published research on temporal relations in general is considerable, less work has been carried out on comparing how we talk about time in various languages and how languages change over time. Several methodological challenges are addressed and solutions proposed, such as how to deal with poor quality historical data and how to identify n-grams in typologically different languages for purposes of comparison. The results of the various studies show how multilingual corpora can increase our knowledge of language-specific features as well as linguistic, typological and cultural differences and similarities across languages.

The Ninth Edition of *A Short Guide to Writing about Biology* provides tools to strengthen student writing and reinforce critical thinking. Written by a prominent biologist, this best-selling guide teaches students to express ideas clearly and concisely. It emphasizes writing as a way of examining, evaluating, and refining ideas: students learn to read critically, study, evaluate and report data, and communicate with clarity. Using a narrative style, the text is its own example of good analytical writing. In this new edition, students learn how to avoid plagiarism (Ch 1 and 3), read and interpret data (Ch 3, 4 and 9), prepare effective Materials and Methods sections in research reports and more (Ch 9), and prepare manuscripts for submission (Ch 9). The text also provides advice on locating useful sources (Ch 2), maintaining laboratory and field notebooks (Ch 9), communicating with different audiences (Ch 6 and 10), and crafting research proposals (Ch 10), poster presentations (Ch 11), and letters of application (Ch 12). Chaga Ian McDonald 2013-11-21 On the trail of the mystery of Saturn's disappearing moons, network journalist Gaby McAslan finds herself in Africa researching the Kilimanjaro Event: a meteor-strike in Kenya which caused the stunning African landscape to give way to something equally beautiful - and indescribably alien. Dubbed the 'Chaga', the alien flora destroys all man-made materials, and moulds human flesh, bone and spirit to its own designs. But when Gaby finds the first man to survive the Chaga's changes, she realizes it has its own plans for humankind... Against the backdrop of Mount Kilimanjaro, McDonald weaves a staggering tale of keen human observation and speculation, as the Kilimanjaro Event changes the course of the human race by exposure to something beyond its imagination. Note: Chaga was published in the UK under the title *Evolution's Shore*. REVIEWS "McDonald... consistently explores new territory with his breathtaking images and incisive language. Both form and substance blend fortuitously in a work that features strong characters, a suspenseful story, and a profound message of hope and transformation. A priority purchase for SF collections." - Library Journal "One of the finest writers of his generation, who chooses

to write science fiction because that is how he can best illuminate the world." - New Statesman "...inventive and challenging... [an] often fascinating piece of speculation." - Kirkus

*Biometric State* Keith Breckenridge 2014-10-02 Biometric identification and registration systems are being proposed by governments and businesses across the world. Surprisingly they are under most rapid, and systematic, development in countries in Africa and Asia. In this groundbreaking book, Keith Breckenridge traces how the origins of the systems being developed in places like India, Mexico, Nigeria and Ghana can be found in a century-long history of biometric government in South Africa, with the South African experience of centralized fingerprint identification unparalleled in its chronological depth and demographic scope. He shows how empire, and particularly the triangular relationship between India, the Witwatersrand and Britain, established the special South African obsession with biometric government, and shaped the international politics that developed around it for the length of the twentieth century. He also examines the political effects of biometric registration systems, revealing their consequences for the basic workings of the institutions of democracy and authoritarianism.

**Karl Pearson** Theodore M. Porter 2004 "Theodore Porter's portrait of Pearson extends from religious crisis and sexual tensions to metaphysical and even mathematical anxieties. Pearson sought to reconcile reason with enthusiasm and to achieve the impersonal perspective of science without sacrificing complex individuality. Even as he longed to experience nature directly and intimately, he identified science with renunciation and positivistic detachment. Porter finds a turning point in Pearson's career, where his humanistic interests gave way to statistical ones, in his *Grammar of Science* (1892), in which he attempted to establish scientific method as the moral educational basis for a refashioned culture."--BOOK JACKET.

The Grammar of Science Karl Pearson 1892 "The author notes that this book is primarily intended as a criticism of the fundamental concepts of modern science. At the same time, the author contends that he is so fully conscious of the ease of criticism and the difficulty of reconstruction, that he has attempted not to stop short at the lighter task. Moreover, the author states that he does not holds the labor of the great scientists or the mission of modern science to be of small account. If the reader finds the opinions of physicists of worldwide reputation, and the current definitions of physical concepts called into question, he must not attribute this to a purely skeptical spirit in the author. He accepts almost without reserve the great results of modern physics; it is the language in which these results are stated that he believes needs reconsideration"--Preface.
