Speeches for the Dead Harold Parker 2018-06-25 The Menexenus, in spite of the dearth of scholarly attention it has traditionally received compared to other Platonic texts, is an important dialogue for any consideration of Plato's views on political philosophy, history, and rhetoric - to say nothing of the dialogue's contribution to the study of civic ideology and institutions, natural law theory, and Plato's notion of race. *Speeches for the Dead* unites the contributions of scholars working on diverse aspects of the dialogue, growing out of a one-day workshop on the same subject at the University of Pennsylvania organized by the editors. In offering a variety of perspectives on the Menexenus, the volume is the very first of its kind in any language. In addition, the volume contains an up-to-date bibliography of scholarship in English, French, German, and Italian. This makes the book a definitive guide and ideal starting point for advanced students and scholars looking for further information about the dialogue.

Berulle's Spiritual Theology of Priesthood Clare McGrath-Merkle 2018-06-07 The widely-reported crisis facing the Roman Catholic priesthood has brought to the fore fundamental questions regarding the theology of the ministerial priesthood. A return to traditional sources has been proposed as one means of inspiration and renewal. The particular spiritual theology of priesthood proposed by the founder of the French school of spirituality, cardinal and statesman Pierre de Berulle (1575-1629), had a major influence on seminary formation as late as the era leading up to the Second Vatican Council. Newly reflected, in part, in Pope St. John Paul II's post-synodal exhortation *Pastore Dabo Vobis*, this spiritual theology of priesthood again enjoys a wide appreciation. This monograph represents the first in-depth critical appraisal of Berulle's ideas and his influence on the development of the Roman Catholic theology of the priesthood, principally through his use of concepts adapted from the realm of speculative mysticism, that is, philosophical speculation regarding mystical experience, and shaped into an applied metaphysic. Key notions underlying his polemicized positive theology, and related to the Christological debates of the Reformation and Counter Reformation eras, include such concepts as subsistence, relation, substance, obediential potency, person, causality, image, being, and more. The author's thesis is that Berulle's spiritual theology of priesthood created a sea change in the theology of priesthood, heretofore unrecognized, as his ideals survived mainly in formation literature and have been

underexplored by theologians and philosophers, who have passed over the pertinence of this category of work in particular and spiritual theology in general in the shaping of theological concepts related to the priesthood. This study details how Berulle's project to renew the priesthood fostered the absorption of certain Reformist and Counter-Reformist inheritances and aporias into mainstream tradition, including an interpretation of exemplar causality as generative, and of the priest as public person and transparent image.

Church and Theology in the Nineteenth Century Ferdinand Christian Baur 2018-03-14 The last volume of Baur's church history, based on lectures delivered during the 1850s, covers the nineteenth century. They were edited and published by Eduard Zeller after Baur's death. Since the lectures devote equal attention to theological and ecclesiastical matters, the title in English is Church and Theology in the Nineteenth Century. Baur provides critical analyses of the philosophers and theologians of the nineteenth century (Herder, Schiller, Goethe, Kant, Fichte, Schelling, Jacobi, Schleiermacher, Marheineke, Neander, Mohler, Hegel, Strauss, Feuerbach, and many others), as well as details about European Catholic and Protestant church history from 1800 to 1860. What he produces is a "participant history," written by a scholar very much engaged in the issues of his time. Ferdinand Christian Baur was a professor of theology at the University of Tübingen from 1826 to 1860. He is known for his path-breaking studies in New Testament literature and historical theology. Recent translations of his work by Brown and Hodgson include History of Christian Dogma and Lectures on New Testament Theology.

World of the Elements Hans-Jürgen Quadbeck-Seeger 2008-01-08 You know that you need oxygen to breathe, that neon can glow and chrome shines? But did you know that your cell phone contains arsenic, your spectacles contain rhodium and that the tin pest is not a disease? And can you name just three researchers whom we have to thank for all these results? Here, Professor Quadbeck-Seeger, a long-serving member of the board at BASF, goes in search of these and other questions. Based on the periodic table, the key reference source for any natural scientist, he explains the criteria that define an element's position in the table and are responsible for its particular characteristics. In a clear and concise manner, he describes for each element the story behind its discovery, its physical and chemical properties as well as its role in our everyday lives. Enriched by a wealth of interesting details, this beautifully designed book in full color represents not only varied reading, but also a treasure trove of surprising facts. Ideally combined with the "Historical Periodic Table" poster, this book is aimed at younger audiences and is thus particularly suitable for schools, lectures and other courses.

Geology and Religion Martina Kölbl-Ebert 2009 The book discusses this long-standing relationship from a historical point of view, which in the past has been sometimes indifferent, sometimes fruitful and sometimes full of conflict. The relationship continues well into the present. While Christian

fundamentalists attack evolution and related palaeontological findings as well as the geological evidence of the age of the Earth, mainstream theologians strive for a fruitful dialogue between science and religion. Much of what is written and discussed today can only be understood, when the historical perspective is added. This book considers the following topics: the development of geology from mythological approaches towards the European Enlightenment, Biblical or Geological Flood and the age of the Earth, geology within 'religious' organizations, biographical case studies of geological clerics and religious geologists, religion and evolution, historical aspects of creationism and its motives.

1001 Quotations to Inspire You Before You Die Robert Arp 2018 1001 Quotations To Inspire You Before You Die is full of smart remarks - not just sassy one-liners (although there are plenty of those), but also more considered, philosophical epigrams that make us pause and reflect on a range of profound topics. Each quotation is accompanied by an insightful account of its meaning and the historical context in which it was first uttered or written. Some famous quotations are straightforward, but many need contextualising - it's often not exactly what was said, but who said it, and in what context, that is more important. Many oft-quoted remarks open up whole new worlds of thought and interpretation. What, for example, did Voltaire mean when he wrote 'If God did not exist, it would be necessary to invent him'? - was he hinting at his own atheism (unlikely, given the age in which he lived) or making a more subtle point about the difficulty of apprehending the Almighty? This book looks into these and a host of other such questions, and takes the reader from the source material into illuminating discussions of its wider significance. We all love quotations - we use them to make our points, to plead our cases and to justify our opinions, as well as to honour, glorify, motivate, incite, besmirch, bewitch and beguile. 1001 Quotations To Inspire You Before You Die will help you do all that and more.

Hegel Martin Heidegger 2015-08-31 Martin Heidegger's writings on Hegel are notoriously difficult but show an essential engagement between two of the foundational thinkers of phenomenology. Joseph Arel and Niels Feuerhahn provide a clear and careful translation of Volume 68 of the Complete Works, which is comprised of two shorter texts—a treatise on negativity, and a penetrating reading of Hegel's Phenomenology of Spirit. In this volume, Heidegger relates his interpretation of Hegel to his own thought on the event, taking up themes developed in Contributions to Philosophy. While many parts of the text are fragmentary in nature, these interpretations are considered some of the most significant as they bring Hegel into Heidegger's philosophical trajectory.

The GR5 Trail Paddy Dillon 2016-01-19 An essential guidebook for walking the GR5, one of the world's most spectacular long-distance trails. The GR5 makes its way through the Alps from the shores of Lac Léman at Geneva to the Mediterranean at Nice. A route of 674km (420 miles), it can be trekked in a month, or split over a series of summer trips. The GR5 is well within the reach of fit and moderately experienced walkers and backpackers. There is good signposting and waymarking, and accommodation, food and drink are all available at regular intervals. The paths and tracks are generally well graded, while steep climbs are tackled on zigzag paths, so the overall gradient is not so severe. Every summer, thousands of walkers embark on this trek. This guidebook also describes some scenic variant routes, including the stunning GR55 through the Vanoise National Park and the delightful GR52 that crosses the Mercantour National Park. Full descriptions and maps are provided for these alternatives. The book includes daily stages, timings, ascents and descents, full-colour mapping and gradient profiles, alongside information about facilities and services along the route. The result is an ideal companion to planning and completing your trek. Two further Cicerone guidebooks cover the remaining sections of the GR5; 'The GR5 Trail - Vosges and Jura', and 'The GR5 Trail - Benelux and Lorraine' which together cover the route from Lac Léman to the Hoek Van Holland.

On Freedom Peter Trawny 2017-11-16 How do we challenge the structures of late capitalism if all possible media through which to do do is inescapably capitalist? This urgent political question is at the heart of Peter Trawny's major new work. With searing precision Trawny demonstrates how our world has become wholly determined by technology, capital, and the medium. In this world of the 'TCM', we universal subjects remain in a state of apathy that is temporarily punctuated, but also reinforced, by the phantasmatic dream of difference offered us by the 'Hollywood machine.' Our sole motivation is to gain money and the power it brings. The only meaningful difference in the world of the TCM universal is the difference between wealth and poverty. Freedom here is then the freedom to dispose of things

(particularly technological objects) and to gain pleasure. It makes our relation to our surroundings essentially 'touristic,' and our relation to the earth an essentially exploitative one. The notion of personal or societal freedom has never been more controversial or, seemingly, more far from our grasp. While exploring in details the difficulties we face in our attempts to be free, Trawny builds an almost Utopian vision of how to break out of the mediums in which we operate and experience a new kind of freedom - both one of intimacy, and one through philosophy. An ambitious and lively yet completely rigorous work, this book offers a fascinating vision of how to live and live well.

Pre-Mesozoic Geology of Saxo-Thuringia Ulf Linnemann 2010 The Saxo-Thuringian Zone is pivotal for understanding the Variscan evolution of Central Europe, as this part of Gondwana was one of the first to collide with Laurussia. The Saxo-Thuringian Zone comprises domains that have experienced variable degrees of Variscan metamorphism ranging from medium grade to UHT/UHP in some domains, while other parts were largely unaffected by deformation or metamorphism. These differences in overprint reflect pre-Variscan crustal heterogeneity and thickness variation, where thinner segments were wedged into the subduction zone and rigid, thicker blocks escaped subduction. The heterogeneity of crustal thickness is considered to be caused by Ordovician rifting (470-480 Ma) of the Cadomian crust (570-540 Ma) at the Gondwana margin. Today, magmatic and sedimentary rocks deposited on the thin crust of these rifts form the metamorphic complexes of the Saxon Granulite Massif and the Erzgebirge Mtns. Variable response of crust of different thickness to Variscan deformation and metamorphism is not particular to the Saxo-Thuringian Zone, but rather a typical feature of the crust all over Variscan Europe. The 18 chapters of this book are review and synthesis papers and present overviews of the Cadomian evolution, the post-Cadomian development of the passive margin, a state of the art assessment of the biostratigraphic record of Saxo-Thuringian sediments, various aspects (metamorphism, structure, magmatism) of the Variscan reworking of the Saxo-Thuringian Zone and processes related to the erosion of the Variscan Orogen. Extensive references include also older, generally difficult to find literature references, PhD theses and original descriptions published in very local journals. This book makes use of, and in part provides, previously unavailable maps and borehole data, largely acquired in GDR time in the course of exploration for uranium, fossil fuels, and ore minerals. The geological sheet map of the Pre-Permian geology of Eastern Germany, based on this material and compiled by SDAG Wismut (now WISMUT GmbH), is included and made available for the first time to a wider audience. Numerous figures and additional materials are provided on the enclosed DVD.
