"This well written and well edited book fills a unique gap....[one of the] precious few [books] that focus on science or medicine and [one of] even fewer that cover the history of nursing."(Three Stars)--Doody's Book Review Service While there have been many research texts in the nursing literature, and nursing history is both taught in courses and of popular interest to practicing nurses, there has never been a hands-on text that describes the process of doing historical research in nursing. This book, contributed by well-known and respected nurse historians, provides the necessary direction, guidance, and examples needed to conduct historical research. It covers such topics as historiography, biographical research, using artifacts in historical research, doing archival and other data searches, doing international historical research, and locating funding sources for historical research. **Greenfield's Surgery** Michael W. Mulholland 2012-09-11 The Fifth Edition of Greenfield's Surgery has been thoroughly revised, updated, and refocused to conform to changes in surgical education and practice. Reflecting the increasingly clinical emphasis of residency programs, this edition features expanded coverage of clinical material and increased use of clinical algorithms. Key Points open each chapter, and icons in the text indicate where Key Points are fully discussed. Many of the black-and-white images from the previous edition have been replaced by full-color images. This edition has new chapters on quality assessment, surgical education, and surgical processes in the hospital. Coverage of surgical subspecialty areas is more sharply focused on topics that are encountered by general surgeons and included in the current general surgery curriculum and ABSITE exam. The vascular section has been further consolidated. A new editor, Diane M. Simeone, MD, PhD, has joined the editorial team. This edition is available either in one hardbound volume or in a four-volume softbound set. The lightweight four-volume option offers easy portability and quick access. Each volume is organized by organ system so you can find the facts you need within seconds. The companion website presents the fully searchable text, an instant-feedback test bank featuring over 800 questions and answers, and a

comprehensive image bank. Unique to this new edition's website are 100 "Morbidity and Mortality" case discussions. Each case reviews a specific surgical complication, how the complication was addressed, and reviews the literature on approaches and outcomes.

**Maldynia** James Giordano 2016-04-19 Whether initiated by injury or disease, induced and sustained by changes in the nervous system, or manifested by society and culture, chronic pain can change one's first-person experience of the body and the world, and ultimately impacts cognitions, emotions, and behavior. Many fine medical books address the causes and management of chronic intractable pain, but rarely do they focus on the ways that such pain creates illness and is experienced and expressed by persons in pain. *Maldynia: Multidisciplinary Perspectives on the Illness of Chronic Pain* is about chronic pain that has progressed to a multidimensional illness state in and of itself. Although often dismissed as such, this pain is not imaginary, but rather represents an interaction of neurobiological processes, emotional and behavioral responses, and socio-cultural effects and reactions that become enduring elements in the life and world of the pain patient, and often remain enigmatic for those who provide care. Taking a comprehensive approach that covers science, humanities, and culture, this volume emphasizes the need for researchers, clinicians, and caregivers to regard the ways in which chronic intractable pain becomes illness and affects a patient's biological, social, and psychological states, as well as his or her sense of self. Edited by neuroscientist and neuroethicist James Giordano, this book contains 17 insightful chapters representing medicine, neuroscience, psychology, philosophy, ethics, history, art, and the ministry. This exceptional volume also looks at representations of pain in and through the arts, addresses the assignation of values and meaning in pain assessment and treatment, and considers ways to conjoin the sciences and humanities so as to inform the practice of pain medicine and improve the care of those suffering the illness of chronic pain.

**Knowledge Translation in Health Care** Sharon Straus 2011-08-24 Health care systems worldwide are faced with the challenge of improving the quality of care. Providing evidence from health research is necessary but not sufficient for the provision of optimal care and so knowledge translation (KT), the scientific study of methods for closing the knowledge-to-action gap and of the barriers and facilitators inherent in the process, is gaining significance. Knowledge Translation in Health Care explains how to use research findings to improve health care in real life, everyday situations. The authors define and describe knowledge translation, and outline strategies for successful knowledge translation in practice and policy making. The book is full of examples of how knowledge translation models work in closing the gap between evidence and action. Written by a team of authors closely involved in the development of knowledge translation this unique book aims to extend understanding and implementation worldwide. It is an introductory guide to an emerging hot topic in evidence-based care and essential for health policy makers, researchers, managers, clinicians and trainees.

**Assessing Students** Derek Rowntree 2015-11-30 Assessment methods can largely determine what and how students learn, so it is vital that our assessment methods are appropriate to our true educational purposes. This book examines the issues underlying assessment procedures, such as truth, fairness, trust, humanity and social justice and goes on to consider the five key dimensions of assessment: \* why assess? \* what to assess? \* how to assess? \* How to interpret? \* How to respond? **Fiction in the Archives** Natalie Zemon Davis 1987 To receive a royal pardon in sixteenth-century France for certain kinds of homicide--unpremeditated, unintended, in self-defense, or otherwise excusable--a supplicant had to tell the king a story. These stories took the form of letters of remission, documents narrated to royal notaries by admitted offenders who, in effect, stated their case for pardon to the king. Thousands of such stories are found in French archives, providing precious evidence of the narrative skills and interpretive schemes of peasants and artisans as well as the well-born. This book, by one of the most acclaimed historians of our time, is a pioneering effort to use the tools of literary analysis to interpret archival texts: to show how people from different stations in life shaped the events of a crime into a story, and to compare their stories with those told by Renaissance authors not intended to judge the truth or falsity of the pardon narratives, but rather to refer to the techniques for crafting stories. A number of fascinating crime stories, often possessing Rabelaisian humor, are told in the course of the book, which consists of three long chapters. These chapters explore the French law of homicide, depictions of "hot anger" and self-defense, and the distinctive characteristics of women's stories of bloodshed. The book is illustrated with seven contemporary woodcuts and a facsimile of a letter of remission, with appendixes providing several other original documents. This volume is based on the Harry Camp Memorial Lectures given at Stanford University in 1986.

**Pathways to Pain Relief** Frances Sommer Anderson 2013-01-21 *Pathways to Pain Relief* is based upon the pioneering work of John E. Sarno, MD, Professor of Rehabilitation Medicine, New York University School of Medicine. Dr. Sarno has advanced the idea that a wide variety of pain disorders are psychophysiologic in origin. Psychophysiologic disorders, previously referred to as psychosomatic disorders, are just one aspect of the recently energized field of mindbody medicine. What distinguishes *Pathways to Pain Relief* is that it embraces the position that musculoskeletal pain and other psychophysiologic disorders can originate from psychological experiences as a means to protect an individual from unbearable emotional distress. Psychotherapeutic techniques based on the medicalization of musculoskeletal pain foreclose the possibility of approaching these conditions as a psychophysiologic disorder. The medicalization paradigm prevents many clinicians from recognizing that the same emotional conflicts which lead to psychological symptoms can initiate the development of physical symptoms as well. *Pathways to Pain Relief* provides details on how treatment has worked from the patient's and the therapist's point of view. The authors, Dr. Frances Sommer Anderson & Dr. Eric Sherman, present clinical case material to illustrate how musculoskeletal pain and other psychophysiologic disorders can originate from psychological experiences as a means to protect an individual from unbearable emotional distress.

*A Comparative History of Literatures in the Iberian Peninsula* Fernando Cabo Aseguinolaza 2010-05-26 *A Comparative History of Literatures in the Iberian Peninsula* is the second comparative history of a new subseries with a regional focus, published by the Coordinating Committee of the International

Comparative Literature Association. As its predecessor for East-Central Europe, this two-volume history distances itself from traditional histories built around periods and movements, and explores, from a comparative viewpoint, a space considered to be a powerful symbol of inter-literary relations. Both the geographical pertinence and its symbolic condition are obviously discussed, when not even contested. Written by an international team of researchers who are specialists in the field, this history is the first attempt at applying a comparative approach to the plurilingual and multicultural literatures in the Iberian Peninsula. The aim of comprehensiveness is abandoned in favor of a diverse and extensive array of key issues for a comparative agenda. A Comparative History of Literatures in the Iberian Peninsula undermines the primacy claimed for national and linguistic boundaries, and provides a geo-cultural account of literary inter-systems which cannot otherwise be explained.

*Chronic Pain Epidemiology* Peter Croft 2010-09-30 This book provides an invaluable framework and basis for thinking about chronic pain and the potential for its prevention in public health terms.

**Principles of Internal Fixation of the Craniomaxillofacial Skeleton** Michael Ehrenfeld 2012-07-18 Traditionally, each specialty involved in craniomaxillofacial trauma and orthognathic surgery had its own areas of interest and expertise. This introductory textbook is different in that it presents the combined and focused expertise and competence of the different specialties on the entire craniofacial skeleton. The principles described in this textbook represent the evolution of craniomaxillofacial buttress reconstruction over the last 60 years. In addition to standard procedures, techniques representing recent surgical advances and new developments are introduced as well. This textbook not only provides an overview on current concepts of craniomaxillofacial trauma care and orthognathic surgery, but also helps to understand the complexity of the craniofacial skeleton and its related soft tissues for an efficient and successful reconstruction of the face following trauma and congenital deformities.
