Blessed Days of Anaesthesia Stephanie J. Snow 2009-09-10 Among all the great discoveries and inventions of the nineteenth century, few offer us a more fascinating insight into Victorian society than the discovery of anaesthesia. Now considered to be one of the greatest inventions for humanity since the printing press, anaesthesia offered pain-free operations, childbirth with reduced suffering, and instant access to the world beyond consciousness. And yet, upon its introduction, Victorian medics, moralists, clergymen, and scientists, were plunged into turmoil. This vivid and engaging account of the early days of anaesthesia unravels some key moments in medical history: from Humphry Davy's early experiments with nitrous oxide and the dramas that drove the discovery of ether anaesthesia in America, to the outrage provoked by Queen Victoria's use of chloroform during the birth of Prince Leopold. And there are grisly ones too: frequent deaths, and even notorious murders. Interweaved throughout the story, a fascinating social change is revealed. For anaesthesia caused the Victorians to rethink concepts of pain, sexuality, and the links between mind and body. From this turmoil, a profound change in attitudes began to be realised, as the view that physical suffering could, and should, be prevented permeated through society, most tellingly at first in prisons and schools where pain was used as a method of social control. In this way, the discovery of anaesthesia left not only a medical and scientific legacy that changed the world, but a compassionate one too.

Anaesthesia and the Practice of Medicine: Historical Perspectives Keith Sykes 2021-08-06 Written by two anaesthetists, one British and one American, this unique book focuses on the transatlantic story of anaesthesia. The authors have both worked at the two hospitals where the first general anaesthetics for surgery were given in 1846, Massachusetts General Hospital in Boston, Massachusetts and University College Hospital, London. Each with more than fifty years' experience of working in anaesthesia, they combine their knowledge and expertise to offer a fresh outlook on the development of anaesthesia through the ages. This highly informative and intriguing text details the origins of anaesthesia, outlines the different techniques of anaesthesia and traces its progress with illuminating and enlightening commentaries. This is a fascinating book which considers the role key figures have played in developing anaesthesia including, Queen Victoria, William Morris, La Condamine, Bjorn Ibsen and Henry Beecher. Broken down into four sections, which are divided into easy-to-read chapters and filled with top quality photographs, this book makes compelling reading. It is recommended to all those interested in the history and development of medicine through the ages, and is of particular interest to anaesthetists. More than just the science of anaesthesia, this is the story about the people and personalities who have made anaesthesia what it is today.

*Pulse Waves* Paolo Salvi 2016-10-29 This new, revised and updated edition takes into account the most recent advances in the understanding of human pathophysiology. *Mini Nutritional Assessment (MNA)* Bruno J. Vellas 1999 This book is the first of a new series which will present the proceedings of the newly established Nestlé Nutrition Workshop Series: Clinical & Performance Programme aimed at adult nutrition. Undernutrition is a common phenomenon in elderly people, and malnutrition reaches significant levels in those being in hospital, nursing homes or home care programs. Consequences of malnutrition often go unrecognised owing to the lack of specific validated instruments to assess nutritional status in frail elderly persons. The Mini Nutritional Assessment (MNA) provides a single, rapid assessment of nutritional status in the elderly of different degrees of independence, allowing the prevalence of protein-energy malnutrition to be determined and to evaluate the efficacy of nutritional intervention and strategies. Easy, quick and economical to perform, it enables staff to check the nutritional status of elderly people when they enter hospitals or institutions and to monitor changes occurring during their stay. Moreover, the MNA is predictive of the cost of care and length of stay in hospital. This publication will be of immense assistance to heads of geriatric teaching units, teachers in nutrition, clinicians general practitioners and dieticians, enabling them to better detect, recognise and start treatment of malnutrition in the elderly.
