The 3 Ms of Fearless Digital Parenting Carrie Rogers-Whitehead 2021-08-03 How can we protect our kids online—and teach them to protect themselves? Do you feel overwhelmed with technology in your home? Do headlines about this app or that website make you feel anxious and undecided as a parent? Do you get advice from many experts—but still feel unclear on what to do? The book unpacks the “3 Ms” of parenting in the digital age, a proven approach used with thousands of parents through the work of Digital Respons-Ability and its founder, Carrie Rogers-Whitehead. When Carrie first started working in the field of digital citizenship, she found significant gaps in how digital parenting was taught. Not only were parents not informed enough around technology, they also didn’t understand child developmental stages. Parents’ expectations for their children were unrealistic because they didn’t know how online responsibility changes at different ages, as children’s brains change. From this realization, Carrie developed the 3 Ms—three approaches to digital parenting, based on specific age ranges: Model (ages 0-8) Manage (ages 8-13) Monitor (ages 13-18) By teaching parents how to change their approach to digital responsibility based on the developmental stage of their child, she has seen significant success in fostering happier and healthier relationships between parents and kids, as well as safer tech use by kids at all ages. This book presents Carrie’s approach in an accessible, easy-to-implement manner, giving all parents the opportunity to develop better tech use in their own homes and families, and to parent confidently and without fear.

Gangs in the Era of Internet and Social Media Chris Melde 2020-08-13 The ubiquity of the internet and social media has influenced the lives of people across the globe, including young people involved in street gangs and troublesome youth groups. This development raises important questions about the causes, features, and consequences of online gang behavior, as well as the consequences of this new phenomenon for gang prevention and intervention. In this edited volume, members of an international network of gang researchers, the Eurogang Program of Research, present findings and insights from recent academic gang studies focused on the use of internet and social media. It focuses on online features of gangs and the consequences of social media for the study of these groups. The second section of the book focuses on the meaning of online media for the prevention, monitoring and intervention of gangs, and for gang disengagement processes. This is the first volume focused on the role of internet and social media in the study of gangs. Providing much needed insights into online gang processes, it will appeal to students and researchers interested in gangs and juvenile delinquency, and to professionals, practitioners, and policy-makers working on preventing or reducing gang involvement and delinquent behavior.

dominated the smartphone industry. It was to mobile phones as Kleenex is to facial tissues. Then iPhones and Androids appeared out of nowhere and pushed Nokia off the cliff. In just four years, the company lost over 90 percent of its value. Revenues were in freefall; massive layoffs became common. Pundits predicted that bankruptcy wasn't a matter of if, it was a matter of when. Then something equally shocking occurred. In record time, Nokia bounced back. With a vengeance. Nokia reinvented itself and is now the second-biggest player in the \$100 billion-dollar global wireless market. In *Transforming Nokia*, the man who orchestrated and led Nokia's comeback—Chairman of the Board Risto Siilasmaa—reveals the story of Nokia's fall and resurrection. He reveals the inside story of the collapse and provides survival strategies and change-management methods any business leader can take to the bank. You'll learn how to harness the power of what Siilasmaa calls "paranoid optimism" and apply his winning entrepreneurial leadership model to rise above any challenge and drive sustainable success. Whether you lead a team or a corporate division, head a start-up or a massive organization, and whether your business is on the rocks or running smoothly, *Transforming Nokia* provides everything you need to sharpen your foresight, expand your options, seize opportunities, and thrive, no matter what changes tomorrow brings.

Dynamics of Big Internet Industry Groups and Future Trends Miguel Gómez-Uranga
2016-03-31 This book applies a new analytical framework to the study of the evolution of large Internet companies such as Apple, Google, Microsoft, Facebook, Amazon and Samsung. It sheds light on the dynamics of business groups, which are approached as 'business ecosystems,' and introduces the concept of Epigenetic Economic Dynamics (EED), which is defined as the study of the epigenetic dynamics generated as a result of the adaptation of organizations to major changes in their respective environments. The book augments the existing literature on evolutionary economic thinking with findings from epigenetics, which are proving increasingly useful in analyzing the workings of large organizations. It also details the theoretical and conceptual nature of recent work based on evolutionary economics, mainly from the perspective of generalized Darwinism, resilience and related variety, and complements the work conducted on evolutionary economics by applying the analytical framework of EED. It makes it easier to forecast future dynamics on the Internet by proving that a sizable number of big business groups are veering from their initial paths to take unprecedented new directions as a result of competition pressure, and as such is a valuable resource for postgraduates and researchers as well as those involved in economics and innovation studies.

Your Post Has Been Removed Frederik Stjernfelt 2019-01-01 This open access monograph argues established democratic norms for freedom of expression should be implemented on the internet. Moderating policies of tech companies as Facebook, Twitter and Google have resulted in posts being removed on an industrial scale. While this moderation is often encouraged by governments - on the pretext that terrorism, bullying, pornography, "hate speech" and "fake news" will slowly disappear from the internet - it enables tech companies to

censure our society. It is the social media companies who define what is blacklisted in their community standards. And given the dominance of social media in our information society, we run the risk of outsourcing the definition of our principles for discussion in the public domain to private companies. Instead of leaving it to social media companies only to take action, the authors argue democratic institutions should take an active role in moderating criminal content on the internet. To make this possible, tech companies should be analyzed whether they are approaching a monopoly. Antitrust legislation should be applied to bring those monopolies within democratic governmental oversight. Despite being in different stages in their lives, Anne Mette is in the startup phase of her research career, while Frederik is one of the most prolific philosophers in Denmark, the authors found each other in their concern about Free Speech on the internet. The book was originally published in Danish as *Dit opslag er blevet fjernet - techgiganter & ytringsfrihed*. Praise for 'Your Post has been Removed' "From my perspective both as a politician and as private book collector, this is the most important non-fiction book of the 21st Century. It should be disseminated to all European citizens. The learnings of this book and the use we make of them today are crucial for every man, woman and child on earth. Now and in the future." Jens Rohde, member of the European Parliament for the Alliance of Liberals and Democrats for Europe "This timely book compellingly presents an impressive array of information and analysis about the urgent threats the tech giants pose to the robust freedom of speech and access to information that are essential for individual liberty and democratic self-government. It constructively explores potential strategies for restoring individual control over information flows to and about us. Policymakers worldwide should take heed!" Nadine Strossen, Professor, New York Law School. Author, *HATE: Why We Should Resist It with Free Speech, Not Censorship*.

Investigation Of Competition In Digital Markets United States Congress
2020-10-06 In June 2019, the Committee on the Judiciary initiated a bipartisan investigation into the state of competition online, spearheaded by the Subcommittee on Antitrust, Commercial and Administrative Law. As part of a top-to-bottom review of the market, the Subcommittee examined the dominance of Amazon, Apple, Facebook, and Google, and their business practices to determine how their power affects our economy and our democracy. Additionally, the Subcommittee performed a review of existing antitrust laws, competition policies, and current enforcement levels to assess whether they are adequate to address market power and anticompetitive conduct in digital markets. Over the course of our investigation, we collected extensive evidence from these companies as well as from third parties—totaling nearly 1.3 million documents. We held seven hearings to review the effects of market power online—including on the free and diverse press, innovation, and privacy—and a final hearing to examine potential solutions to concerns identified during the investigation and to inform this Report's recommendations. A year after initiating the investigation, we received testimony from the Chief Executive Officers of the investigated companies: Jeff Bezos, Tim Cook, Mark Zuckerberg, and Sundar Pichai. For nearly six hours, we pressed for answers about their business practices, including about evidence concerning the extent to which they have exploited, entrenched, and expanded their power over digital markets in anticompetitive and abusive ways. Their answers were often evasive and non-responsive, raising fresh questions about whether they believe they are beyond the reach of democratic oversight. Although these four corporations differ in important ways, studying their business practices has revealed common problems

Smarter Than You Think Clive Thompson 2013-09-12 A revelatory and timely look at how technology boosts our cognitive abilities—making us smarter, more productive, and more creative than ever It's undeniable—technology is changing the way we think. But is it for the better? Amid a chorus of doomsayers, Clive Thompson delivers a resounding “yes.” In *Smarter Than You Think*, Thompson shows that every technological innovation—from the written word to the printing press to the telegraph—has provoked the very same anxieties that plague us today. We panic that life will never be the same, that our attentions are eroding, that culture is being trivialized. But, as in the past, we adapt—learning to use the new and retaining what is good of the old. *Smarter Than You Think* embraces and extols this transformation, presenting an exciting vision of the present and the future.

A Survey on Today's Smartphone Usage Tobias Himmelsbach 2012-04-20 Diploma Thesis from the year 2011 in the subject Computer Science - Miscellaneous, grade: 2,3, Technical University of Berlin (Agententechnologien in betrieblichen Anwendungen), language: English, abstract: The smartphone market is evolving rapidly, irrespective of the well-known spread within the business sector. In recent years the average users tend to replace their traditional

mobile phones, PDAs and Palms with smartphones. These devices have become a pervasive part of everyday life. Dealing with huge amounts of data, the mobile device's and application's demand for certain security standards cannot be underestimated. In recent studies the individual user's needs in terms of technical features, applications etc. have not been addressed and analyzed properly. To capture the problem in its full extent it is vital to understand the user's expectations. Besides, the usage patterns have to be described especially against the background of security aspects. As mentioned before, recent analyzes did not specifically ask what the user expects from a smartphone. Hence, the main objective of this work is to get a broad picture on how smartphones are used today and what users expect, taking into consideration security aspects.. An international web-based online survey was designed and performed to measure and analyze users' behaviour when using smartphones, with the aim of finding out what they want and expect from a smartphone. The main goals were to identify user needs in the context of smartphones, to analyze their knowledge and acquisition to security aspects and to get significant data about the user's behaviour. The main findings of the survey are that on the one hand, most of the users want a smartphone to provide classic mobile phone features, such as performing phone calls, writing messages or storing contacts. On the other hand they want a smartphone to provide mobile internet access, navigation features, multimedia aspects, a comfortable usability and a good look and feel/design. The brand, price and battery performance plays a minor role for them. With respect to security aspects, most of the users have a good knowledge about security in general, pointing out that the security of the smartphone is a very important aspect for them. The obtained results can be provided as recommendations to smartphone vendors, application developers and carriers, who can use them in product portfolio management and product development
